UNITED STATES DISTRICT COURT
FOR THE DISTRICT OF COLUMBIA

EDWARD BANKS, *et al.,*

Plaintiffs,

v.

QUINCY BOOTH, in his official capacity as Director of the District of Columbia Department of Corrections, *et al.,*

Defendants.

No. 1:20-cv-849 (CKK)

REPORT SUBMITTED BY *AMICUS CURIAE* PURSUANT TO SEPTEMBER 16, 2020 ORDER

Pursuant to the September 1 , 2020 Order issued in the above-captioned matter, (D t. Nos. 12 , 12),[1] a , race M. opes and Mar ordan,[2] submit the follo in report for consideration by the Court and the Parties.

[1] The Court amended the initial order issued on September 1 , 2020 to clarify the date by hich *a* ere re uired to be in their revie . The amended order re uired *a* to provide the Parties and the Court ith an oral report no later than October 1, 2020 and a ritten report no later than November 1 , 2020. Thereafter, on October 2 , 2020 a Second Amended Order Appointin Amicus as entered (D t No. 129), hich as identical in all respects to the prior order e cept, upon re uest of the *a* and ith the consent of the Parties, it chan ed the date of the oral report from October 1, 2020, (hich as a Saturday), to November 9, 2020, and the date for the ritten report from November 1 , 2020 to November 20, 2020. (D t No. 129). The Court ranted a consent motion to further enlar e the filin deadline for the ritten report to December 11, 2020, (D t. No. 1 2), to afford *a* sufficient time to complete additional unanticipated assessment activities. (D t. No. 1).

[2] *err M. . tr t l a*, C.A. No. 1 19-8 (D.C. Super. Ct.) is a class action la suit related to the conditions of confinement and treatment in the District of Columbia s uvenile ustice system. race M. opes has served as the court-appointed Special Arbiter in this la suit and Mar ordan has or ed and collaborated ith her on monitorin and reportin on the District overnment s compliance ith the remedial orders issued in the case. The plaintiff class is represented by multiple attorneys, includin counsel from the District of Columbia Public Defender Service and the District of Columbia defendants are represented by counsel from the District of Columbia s Office of the Attorney eneral. Pursuant to a Settlement A reement approved by the Superior Court in uly 2020, durin a hearin conducted on December 1, 2020, the presidin ud e in *err M.* indicated that he found the conditions established by the Settlement A reement had been satisfied and that he ould be issuin a termination order later in the month. One of the conditions established by the Settlement A reement re uired the District of Columbia s Mayor to issue a Mayoral Order establishin the Office of Independent uvenile ustice acilities Oversi ht. A second condition re uired the Mayor to appoint Mar ordan as the E ecutive Director of

I INTRODUCTION

This is the third report submitted by *a* in this case. ere initially appointed in an order issued on April 9, 2020, (D t No. 4), to provide specific information to the Court re ardin medical services and environmental health and hy iene related to CO ID-19, the disease caused by SARS-Co -2, the novel coronavirus, at t o detention facilities operated by the District of Columbia Department of Corrections (DOC), the Central Detention acility (CD) and the Correctional Treatment acility (CT). Pursuant to that order, *a* provided information to the Court and Parties durin an April 1 , 2020 teleconference and in a ritten report submitted on April 18, 2020 (D t. No. 4). One day later, on April 19, 2020, the Court issued an order rantin the Plaintiffs re uest for a Temporary Restrainin Order (TRO) and re uirin the Defendants to ta e certain specified actions (D t. No. 48). Thereafter, in an order issued on April 28, 2020 (D t. No. 2), *a* ere appointed for the second time, to provide information to the Court re ardin certain matters related to the TRO. ollo in issuance of the April 28, 2020 order, *a* provided an oral report to the Court and Parties on May 11, 2020, and submitted a ritten report on May 20, 2020 (D t. No.).

On une 18, 2020, the Court issued a preliminary in unction in this case (D t. Nos. 99, 100). The preliminary in unction re uires the Defendants to ta e certain specified actions, hich are described more fully in the ne t sections of this report, related to the follo in si conditions of confinement: medical care social distancin environmental health and safety conditions in isolation units access to le al calls and testin for CO ID-19. ere appointed for the

---

this oversi ht office. As re uired by the Settlement A reement, these Mayoral Orders ill become effective upon the issuance of the termination order. At that time Mr. ordan ill become a District overnment employee, ith uni ue authority and independence, for a three-year term sub ect to removal only for cause. The Court and counsel for the Parties in the instant case, includin counsel for the United States, have been apprised of these circumstances. In response, all counsel indicated that there are no ob ections to Mr. ordan s participation as an *a* in this matter.

third time on September 1 , 2020 (D t. Nos. 12 , 12), to provide information to the Court and the Parties re ardin the Defendants compliance ith the une 18, 2020 preliminary in unction.

Pursuant to the September 1 , 2020 Order, *a* provided an oral report to the Court and the Parties durin a hearin conducted by telephone on November 9, 2020. Durin that proceedin , the Court re uested that in their ritten report *a* address certain matters hich ere not initially contemplated by the September 1 , 2020 Order, and also provide additional details related to some of the matters that ere the sub ect of the November 9, 2020 oral report.

This report summari es *a* November 9, 2020 presentation and includes the supplemental information *a* ere as ed to address. In addition, this report e plains the methodolo y *a* relied upon to conduct their assessment, describes relevant bac round data re ardin the facilities sub ect to the assessment, and presents updated information concernin identified cases of CO ID-19 at both the CD and CT .

The Defendants have continued to cooperate fully ith *a* re uests for information. As a eneral matter, DOC and contract staff at every level have made substantial efforts to respond to *a* re uests promptly. reco ni e and appreciate the efforts the Defendants have continued to ma e to facilitate their revie .

II METHODOLO Y

ollo in the issuance of the September 1 , 2020 order, *a* conducted unannounced and unescorted site visits on multiple shifts on October 22, 2 , 29, November 1 and December 2, 2020 at the CD , and on October 2 and November 2, 2020 at the CT . Durin the course of these site visits, *a* visited eneral population, ma imum and medium security housin units as ell as housin units desi nated for enhanced monitorin , inta e, special mana ement, and for inmates ith mental health needs. A total of 18 housin units ere visited, some on multiple

occasions on different days or shifts (NO-1, SO-1, NO- , SO- , NW-2, NW- , SW- , SW-2, SO-2, C2A, C4C, SMUB, E2A, E4A, E4B, D A, D4B, C2B). Observations in housin units included cells, dayrooms and case mana er s offices. At both facilities, medical units, administrative offices, and visitor entry areas ere visited. In addition, the case mana ement suite, here many le al calls are conducted, as ell as the videoconferencin and visitation areas that are used at the CD for attorney-client videoconferences and meetin s, ere visited.

Structured in-person and or telephone intervie s ere conducted ith members of the DOC e ecutive mana ement team, includin the DOC Deputy Directors of Administration, Operations, Pro rams and Case Mana ement, and Professional Development and Colle e and Career Readiness the Audit and Compliance Mana er the Sanitation Inspection Specialist the DOC Medical Director members of the Correctional Health Pro ram at Unity Health Care, Inc. (Unity), includin the Medical Director, Dental Director, Mental Health Director, ead Dentist, Director of Nursin , and other health care staff the CD and CT Warden and the Deputy Wardens assi ned to each facility maintenance supervisors and staff records office staff and do ens of correctional officers and supervisory correctional staff assi ned to various posts throu hout the facilities. In-person intervie s ere also conducted ith appro imately 80 inmates at both facilities. At the re uest of the DOC Medical Director, *a* also intervie ed an epidemiolo ist under contract ith the D.C. Department of Health (DOH), assi ned to provide support to the DOC and several other District a encies durin the pandemic.[4]

In addition to the information collected durin site visits and from intervie s, *a* re uested and continued to receive access from the DOC to the electronic health records

Unity provides medical services on a contractual basis to inmates at the CD and CT .

[4] At the re uest of the DOH eneral Counsel, this intervie as conducted ith counsel present. It as the only intervie conducted durin the assessment in the presence of counsel.

(EHR) of inmates confined at the CD and CT . Revie and analysis of samples from these records has been conducted and the results are presented herein. The follo in data for both facilities ere also obtained from the DOC or Unity and analy ed:

- Daily census data, includin inmate housin assi nments for the period une 18, 2020 to October 1, 2020
- Data related to admissions and len th of stay for the period une 18, 2020 to October 1, 2020
- Data related to releases and transfers for the period une 18, 2020 to October 1, 2020
- Date related to inmate le al status for the period une 18, 2020 to October 1, 2020
- Sic call re uests and related lo s for the period une 18, 2020 to October 1, 2020
- Data related to all CO ID-19 tests conducted on inmates throu h December 1, 2020 and
- Data related to DOC correctional staffin levels.

III BAC ROUND

Since the issuance of *a* May 2020 report, there have been a number of chan es in population levels, housin practices, housin unit operations, staffin levels, and the support the DOC receives from the DOH. Each of these topics is addressed belo .

A Pop lation

On une 18, 2020, the day the Court issued the preliminary in unction, the combined population of the CD and the CT as 1,249 inmates. The Defendants subse uently reported to the Court that as of une 29, 2020, the combined population of the CD and CT as 1,2 1. Over the four-and-a-half months bet een the issuance of the preliminary in unction and October

---

The team *a* assembled for this sta e of their or included t o additional members. The ma ority of case record revie s ere conducted by anet Maher, an attorney ho has e tensive e perience in or in in institutional and healthcare settin s. Ms. Maher headed the Office of Corporation Counsel s Mental Health Division from 1992 to 2000, or ed as Deputy eneral Counsel and Chief of Staff for the District s Child and amily Services A ency from 2000 to 200 and as DO Compliance Officer at Saint Eli abeths Hospital from 200 to 2014. rom 201 to her retirement in 201 , she headed the Hospital s Performance Improvement Department. She also has provided consultative services to the Maryland and Pennsylvania behavioral health systems and to the Office of the Special Arbiter in *err M. . tr t l a*, C.A. No. 1 19-8 (D.C. Super Ct.) Case records ere also revie ed by ulia Cade, a senior parale al ith substantial e perience in similar institutional conte ts.

Durin the November 9, 2020 hearin , *a* incorrectly reported that the lo est population count bet een une 18, 2020 and October 1, 2020 as 1,2 4. Ho ever, upon further revie , 1,248 inmates on une 18, 2020, the day the preliminary in unction as issued, represented the lo est population count for the period.

Notice of Compliance ith the Court s Preliminary In unction (D t. No. 101) at .

1, 2020, the population of the t o facilities increased by 19 percent to 1,48 inmates. Based on an analysis of data submitted by the Defendants, this as driven primarily by increases in the number of inmates confined on pretrial felony char es and to a lesser e tent by increases in the number of parole violators and pretrial misdemeanants confined at the CD and the CT .[8]

Because population increases in secure facilities are driven by either increases in the number of admissions, increases in the amount of time admitted inmates remain incarcerated, or a combination of the t o, *a* analy ed admission and len th of stay trends of inmates housed at the CD and the CT , by le al status. The analysis revealed that after une 18, 2020, admission rates increased each month throu h September 2020, then decreased some hat in October 2020.[9] There ere increases in admission rates for all three cohorts (*.e.,* pretrial felons, parole violators, and pretrial misdemeanants) that drove the population increase. or pretrial felons, the number of admissions per month as si nificantly hi her in Au ust, September, and October 2020 than in the second half of une and in uly 2020.[10] Amon parole violators, after relatively fe admissions in the second half of une, admissions increased in uly and to a lesser e tent in Au ust, but then nearly doubled bet een Au ust and September from to 118, before droppin some hat in October to 8 .[11] inally, amon pretrial misdemeanants, there ere

---

[8] E . 1A, Chart, Combined Population of CD and CT , by Day and e al Status, une 18 - October 1, 2020 E . 1B, Table, Combined Population of CD and CT , by Status and Day, une 18 - October 1, 2020. Durin this period, the population of pretrial felons increased by 1 inmates, from 48 to 4 the population of parole violators increased by inmates, from 88 to 1 1 and the population of pretrial misdemeanants increased by 8 inmates, from 8 to 10 . The Appendi to this report is divided into t o parts. Appendi A hereinafter App. A contains the e hibits that are cited in this report. Some of the e hibits in App. A have been redacted, as appropriate, for filin in the public record. The updated CDC uidelines are contained in Appendi B hereinafter App. B . Unless desi nated by a citation to App. B, all citations to the e hibits included in the Appendi refer to App. A.

[9] E . 1C, Table, Admission to CD and CT , by Status and Month, une 18, 2020 - October 1, 2020. Monthly admissions in Au ust ere 2 percent hi her than in uly, and monthly admissions in September ere 21 percent hi her than Au ust. Althou h admissions dropped by 1 percent durin October relative to the prior month, admission levels ere still hi her than uly and Au ust.

[10] *d.*

[11] *d.*

increases in admissions in Au ust and September before admissions dropped some hat in October.[12]

The avera e len th of stay amon all inmates housed at the CD and CT increased bet een une 18 and October 1, 2020, albeit only sli htly, by appro imately four percent.[1] Amon the three cohorts that primarily accounted for the increases in population, the chan es in len ths of stay varied. The avera e len th of stay amon pretrial felons increased by appro imately ei ht percent bet een une 18 and October 1, 2020. or pretrial misdemeanants, the avera e len th of stay increased by substantially more over the same period, appro imately 1 percent, from 4 days to days. In contrast, amon parole violators the avera e len th of stay dropped by appro imately 28 percent over the same period.

B Sin le vers s Do ble Cellin

also analy ed sin le versus double cellin practices at each facility durin the period une 18 to October 1, 2020. As *a* previously reported, the CD contains 18 housin units, most ith 80 cells.[14] Over the period revie ed, the CD s population ran ed from a lo of 819 inmates to a hi h of 1,0 9 inmates. While there are over 1, 00 cells at the CD , over the period analy ed the avera e daily percenta e of inmates housed in sin le cells as 8 percent (.*e.,* 1 percent of inmates had cellmates).

The double cellin practices at the CD ere at least in part attributable to closed housin units and cells on open housin units that ere ta en out of service due to maintenance issues. Durin *a* site visits in October and early November 2020, five housin units ere

---

[12] *d.*

[13] E . 1D, Table, Avera e en th of Stay of Inmates Housed at CD and CT , by Status and Month, une 18, 2020 - October 1, 2020.

[14] *ee e rt tted r ae r a t t r l , e t rder*, filed May 20, 2020 hereinafter *Ma , e rt* at 4- for a more complete description of the CD .

closed, but durin *a* most recent site visit to the CD on December 2, 2020, only t o housin units ere closed: NO-2[1] and SE-1.[1] A observed numerous cells that ere unoccupied on housin units ith double-celled inmates. Maintenance and correctional staff reported that unoccupied cells ere out of service in some instances because the metal bun s in the cells ere dama ed. ere told that in other instances the cells ere unoccupied because of plumbin problems. CD staff reported that on November 0, 2020, appro imately 4 cells on open housin units ere out of service.[1]

At the CD , *a* additionally analy ed sin le versus double cellin practices in SO-2, the Inta e unit. E cept for inmates ith acute mental health issues, ho are transferred to SO- , and omen, ho are admitted at the CT , the Defendants report that ne inta es are housed on SO-2 until they are medically cleared follo in CO ID-19 testin . Bet een une 18 and October 1, 2020, the population of SO-2 ran ed from a lo of 44 inmates to a hi h of 111 inmates. The avera e daily percenta e of inmates housed in sin le cells on that unit as percent, lo er than the percenta e of inmates housed on sin le cells on non-Inta e housin units. Durin *a* December 2, 2020 site visit, the population of SO-2 as . At that time, inmates ere double celled (*.e.,* occupyin 18 cells) hile 22 cells ere unoccupied.

At the CT , there are 2 housin units, includin the infirmary.[18] Durin *a* most recent site visit to the CT on November 2, 2020, seven housin units ere closed. The CT houses si nificantly fe er inmates than the CD . Bet een une 18 and October 1, 2020, the

---

[1] NO-2 is desi nated to house inmates ho test positive for CO ID-19.

[1] SE-1 as closed because it as bein used for stora e. CD mana ement reported that they are considerin openin the housin unit as part of a plan to enable them to eventually open a second Inta e housin unit else here in the facility.

[1] attempted to obtain records reflectin the number of cells out of service daily ho ever, neither of the t o CD administrative units that *a* ere told maintain these data (*.e.*, Maintenance and Countboo), ere able to provide precise information.

[18] *ee* May 20, 2020 Report at - for a more complete description of the CT facility.

facility population ran ed from a lo of 0 inmates to a hi h of 4 4 inmates and durin that period, it as rare for inmates to have a cellmate. Department of Corrections records indicate that the avera e daily percenta e of inmates housed in sin le cells at the CT durin this period as 99 percent.

C Operations in Response to the Pandemic

Both the CD and CT have continued to implement a 2 -hour per day loc do n. In effect, this means that most inmates remain in their cells e cept for one hour per day hen they are released to sho er, ma e personal telephone calls, atch television, sit in the day room, and or ma e use of small recreation areas ithin the housin units.[19] Inmates assi ned to se re ation units are loc ed do n for 24 hours per day on ee ends.

Be innin in the fall, the DOC has made tablets available to inmates that they can use in their cells. There are t o types of tablets, one ith paid content that includes entertainment options such as videos and ames and another ith free educational content. As e plained belo , the tablets include educational materials related to CO ID-19 and also can be used for attorney-client communications. [20]

Durin *a* prior site visits in April and May 2020, the DOC had desi nated numerous housin units at both facilities as uarantine or isolation units. In contrast, durin site visits conducted from late October to early December 2020, there ere no isolation or uarantine housin units at the CT due to the absence of no n or suspected CO ID-19 cases. At the CD , there as briefly an isolation unit in November after an inmate tested positive upon admission and another housin unit as uarantined after a reported e posure to t o staff

[19] Inmates in many CT housin units also spend out-of-cell time heatin meals in micro ave ovens.
[20] *ee ra* 2 and 8- 9.

members ho tested positive for CO ID-19.[21] In addition to uarantine and isolation units, the DOC also established enhanced monitorin housin units at both facilities for inmates ho return from in-person court appearances or face-to-face visits ith an attorney. Inmates housed on enhanced monitorin units have their temperature chec ed by medical staff daily for up to a 14-day period.

D Staffin

previously reported that the lar e number of correctional staff unavailable for duty, includin staff ho ere not available for reasons related to CO ID-19, had a si nificant impact on facility operations.[22] comparison of correctional staffin levels from mid-May to staffin levels in early December 2020 indicates that the number of staff available to or remains virtually unchan ed.

previously reported that as of May 9, 2020, the DOC had a total of 994 funded correctional officer positions.[2] Of that total, 1 positions ere vacant, five percent. Moreover, an additional 1 0 filled positions, 1 percent, ere encumbered by correctional officers ho ere on unavailable for duty status. Thus, 22 percent of the funded correctional complement as either vacant or not or in .

obtained updated data related to the correctional staffin complement from December 2020. As of December 1, 2020, the DOC had a total of 1,014 funded correctional positions, 20 more funded positions than on May 9, 2020. DOC mana ement reported that as of December , 2020, 110 positions ere vacant, 11 percent, and an additional 1 staff in filled

[21] All of the inmates on the uarantined housin unit ere tested for CO ID-19 and none tested positive.
[22] *ee Ma , e rt* at -8 *e rt tted r ae r a t t r l , rder*, filed April 19, 2020 hereinafter *r l e rt* at 21.
[2] *Ma e rt* at . The total included 844 correctional officer positions, 9 lead correctional officer positions, and supervisory correctional officer positions.

correctional positions, 1 percent, ere unavailable for duty. Thus, hile the number of staff ho ere unavailable for duty decreased, an increase in the number of staff vacancies left the si e of the available or force essentially the same as it as in May.[24]

E S pport from the DOH

Startin at some point in une 2020, a nurse or in ith the DOH be an providin health education related to CO ID-19 to DOC staff and conductin audits, at times on a ee ly basis, related to the use of personal protective e uipment (PPE) at both the CD and CT . Unity and DOC mana ers report that they have been re ularly briefed on the audit findin s and recommendations. In early Au ust 2020, an epidemiolo ist under contract ith the DOH be an to visit the CD and CT to ensure appropriate monitorin of CO ID-19 positive cases and the related submission of data to public health officials provide consultation on uarantine, isolation and testin practices and confer ith Unity s medical director on treatment in individual cases. By all accounts, this increase in DOH support has served as a very helpful resource to both DOC and Unity mana ers.

I FINDIN S

This section summari es *a* findin s re ardin the Defendants performance relative to each of the si re uirements related to conditions of confinement addressed by the une 18, 2020 preliminary in unction.

Re irement One

Defendants shall implement a medical care s stem on eneral pop lation nits that ens res inmates receive attention from a medical provider ithin 2 ho rs of reportin health iss es If this s stem contin es to se sic call slips, Defendants shall ens re that inmates have consistent and immediate access to s ch sic call slips and that said slips are collected at re lar intervals

[24] *ee ra* at 2 -2 for additional information.

The DOC and Unity have added resources to enhance the sic call system at the CD and CT . The evidence sho s that for the most part, the Defendants are no providin inmates at the CD and CT ith consistent access to sic call slips and they are collected at re ular intervals ho ever, inmates are not consistently seen by a medical provider ithin 24 hours of reportin health issues in a si nificant percenta e of cases. These findin s are described belo .

A The Sic Call Process

The DOC relies on a sic call system on eneral population housin units[2] to ensure that inmates receive attention from a medical provider ithin 24 hours of reportin a health issue.[2] The Defendants have increased staffin for health services and made several modifications to the business process related to sic call re uests in response to this re uirement.

The DOC s contract ith Unity Health Care, Inc. as modified to add fundin for the hirin of t o additional nurse practitioners or physician assistants and t o medical assistants for the period May 18 throu h September 0, 2020.[2] The contract modification includes t o contract line items to e tend the contract for t o additional time periods sub ect to fundin availability: from October 1, 2020 to anuary 1,2021 and from ebruary 1, 2021 to April 14, 2021. Subse uent to September 0, 2020, the increased staffin levels authori ed by the modification have remained in effect.[28]

---

[2] As *a* noted durin the November 9, 2020 hearin , *a* interpret eneral population units in this conte t to mean housin units that have not been desi nated as uarantine or isolation units.

[2] Inmates can also access medical care throu h the ur ent care and chronic care clinics.

[2] E . 2A, Amendment of Solicitation Modification of Contract Number CW 88 8, effective May 18, 2020. The contract modification as si ned by a Unity representative on une 2, 2020 and by a District overnment contractin officer on Au ust 11, 2020.

[28] re uested that DOC mana ement produce documentation supportin the e ercise of the option for the additional period that be an on October 1, 2020, and reflectin the associated availability of fundin . Accordin to DOC mana ement, the a ency intends to maintain fundin to support the modification throu hout both additional periods specified in the contract modification, fundin is available, and there is no need for supplemental documentation reflectin the e ercise of the additional period and the availability of fundin .

Intervie s ith Unity staff indicate that this modification as intended to stren then the business process related to sic call by addin clerical staff to collect and trac sic call re uests obtained from the housin units on a more fre uent basis and by increasin the number of clinicians available to deliver medical services.[29] Under this ne system, hich as implemented on une 2 , 2020, inmates are e pected to continue to obtain sic call re uest forms from the correctional staff, and fill them out by enterin their name, date of birth, DCDC number, housin unit, cell number, the date, and information about the nature of their re uest. [0] The une 2020 revisions to the form add certain specific CO ID-19 symptoms and inmates are as ed to chec all that apply to them. [1] The revised form does not provide a prompt for inmates to indicate the time the re uest as made or for medical staff to note the time the re uest as received.

Inmates are instructed to continue to place the sic call re uest forms in the secure collection bo es that are maintained on the housin units. As part of the ne business process the Defendants have implemented, medical assistants at each facility pic up the forms t ice daily from each housin unit, enerally in the early mornin and mid-day. The medical assistants count the forms as they retrieve them and manually record the total number of slips they have collected in a hand ritten lo before leavin each housin unit. After the medical assistant has retrieved the re uest forms, a member of the correctional staff assi ned to the

[29] Unity mana ers report that they be an pilotin this ne process on May 18, 2020.

[0] E . 2B, sample revised Sic Call orm used at CD and CT . Inmates are e pected to chec one of the follo in bo es: I ish to be seen at sic call, dental treatment, mental health or other.

[1] The symptoms listed on the revised sic call re uest form are fever, cou hin , difficulty breathin shortness of breath, headache body ache and upset stomach. *d.* In an effort to ma e the forms more readily identifiable, DOC and Unity mana ers report that the correctional staff have been instructed to print the forms on pin paper. observations indicate that hile use of the revised forms is idespread, inmates also submit sic call re uests usin a variety of documents, includin the previous version of the sic call re uest forms, random sheets of paper, and by fillin out inmate re uest slips, hich are intended for initiatin case mana ement and other administrative re uests. *ee* E . 2C, Inmate Re uest Slip, for a copy of the form used at both facilities to ma e re uests that are processed by case mana ement staff.

housin unit e amines the interior of the bo and documents that there are no sic call re uest forms remainin in the bo .

In contrast to previous site visits, sic call re uest forms ere available on most of the housin units *a* visited before the November 9, 2020 hearin . In fact, of the 1 housin units *a* visited up to the time of the hearin , the forms ere available on every unit other than NO-1, a hi h security housin unit and e cept for inmates confined on NO-1, inmates at both the CD and CT did not report difficulty accessin the sic call forms. Durin a subse uent site visit *a* conducted on December 2, 2020, the forms ere available on NO-1. Moreover, lo s and intervie s ith correctional officers, inmates, medical providers, and medical assistants establish that as a eneral matter sic call re uest forms have been pic ed up t ice daily from the housin units at both facilities since une 2 , 2020. [2]

After sic call re uest forms are pic ed up from all housin units in the mornin and mid-day, the medical assistant assi ned to each facility transfers the tally for each housin unit into an electronic database. The sic call re uests are then tria ed for ur ency by a char e nurse. If the re uest is deemed ur ent, the inmate is e pected to be brou ht to the ur ent care clinic. If the char e nurse determines the re uest is routine, inmates hose sic call re uest forms are pic ed up in the mornin are e pected to be scheduled for a same-day sic call appointment. If the sic call form as collected mid-day, the inmate is e pected to be scheduled for a ne t-day sic call appointment.

Accordin to Unity s mental health mana er, sic call re uests for mental health services are initially tria ed by medical staff. Any that are deemed ur ent are hand delivered to mental health staff for immediate attention. Inmates ho submit re uests that are not identified as

[2] At the CT , in an effort to ensure access to health services, medical providers al the tiers of both special mana ement units on a daily basis.

ur ent are e pected to be seen by a mental health provider ithin 24 hours.

If a sic call re uest indicates the inmate has a dental problem *a d* is in pain or has s ellin or other indication of a possible infection, the char e nurse is e pected to schedule the inmate to be seen by a medical provider on either an ur ent basis or the ne t day at sic call. If there is no indication of pain, s ellin or other indication of a possible infection, the sic call re uest is e pected to be referred to the dental pro ram for follo up as either a Priority One, T o or Three. Priority One is limited to patients ho have indicated on their sic call re uest form that they are in pain or have s ellin or some other indication of infection. It is anticipated that they ill be seen by a medical provider ur ently or ithin 24 hours and seen by a dental provider ithin seven days. Priority T o is identified ith routine dental problems and no apparent pain. These patients are not seen by a medical provider but are scheduled to be seen by a dental provider. Priority Three includes re uests for procedures such as routine cleanin , and li e Priority T o, these patients are not seen by a medical provider, but are scheduled to be seen by a dental provider.

Unity and DOC mana ers have informed *a* that there have been discussions about usin the ne ly adopted educational tablets as a supplemental method (*.e.,* it ould not replace hard copy forms) throu h hich inmates could directly submit sic call re uests to the health care staff. They have described a system in hich an inmate could complete an electronic sic call re uest form on the tablet and transmit it electronically to a desi nated electronic inbo available only to medical staff. Department of Corrections mana ement has reported that the sic call re uest form has been di iti ed for use on the educational tablets. As of December 2, 2020, the electronic sic call form submission process had not been implemented.

intervie ed numerous inmates at the CD and CT re ardin sic call and access to medical care. In contrast to earlier site visits, inmates enerally had positive impressions of the sic call process and asserted that they e pected that if they submitted a sic call re uest form they ould be seen by a medical provider timely.

B Sic Call Data

In order to assess the Defendants performance relative to the 24-hour re uirement, *a* selected a sample of 92 sic call re uests submitted by inmates confined at the CD and CT bet een une 18, 2020 and October 1, 2020. The sample as selected from the ori inal hard copies of the sic call re uest forms that are submitted by inmates. To test the completeness of the data source provided by the Defendants (*.e.,* hether all sic call forms submitted by inmates durin this period ere produced for revie), *a* compared the number of forms produced by the Defendants from uly 2020 at the CD ith the total number of sic call re uests for the same month documented in the spreadsheet maintained by the medical assistants ho pic up the sic call re uests at the CD . [4] or the month of uly 2020, the spreadsheet enerated by the medical assistant assi ned to the CD indicated that a total of 1 8 sic call re uests ere submitted by inmates by comparison, the Defendants produced for revie by *a* a total of 1,1 9 hard copies of sic call re uests at the CD for the same period. ere not able to reconcile this discrepancy.

dre separate samples of sic call re uests from the CD and CT . Because medical, dental, and mental health sic call re uest forms are stored separately after they are

---

Durin the November 9, 2020 hearin *a* e plained that they had conducted a revie of a sample of sic call re uests based on hat they believed ere all sic call re uest forms submitted by inmates bet een une 18 and October 1, 2020. Ho ever, *a* later learned that the sic call re uests from hich they dre the sample ere not all sic call re uests that ere submitted by inmates, but rather a sample selected by Unity staff. Thus, a ne sample as selected by *a* .

[4] *ee ra* at 1 -14 for a more detailed description.

tria ed by the char e nurse, and because some inmates reported delays in responses to sic call re uests concernin dental and mental health services, *a* structured a samplin methodolo y that ensured sic call re uests of all three types ere included in the sample. In total, 1 sic call re uests ere revie ed from the CD and 41 sic call re uests ere revie ed from the CT . The samples from both facilities ere structured to include sic call re uests from every month in the revie period.

Because sic call re uest forms include recorded dates, but not times, it as not possible to calculate the number of elapsed hours bet een an inmate reportin health issues and the inmate receivin attention from a medical provider. or this reason, *a* analy ed the data at the most specific time interval possible iven the available data sources: the number of elapsed *da* bet een an inmate reportin health issues and the inmate receivin attention from a medical provider. used the date recorded by the inmate on the sic call re uest form as the basis for the calculation of the number of elapsed days bet een an inmate reportin a health issue and receivin attention from a provider. [8] On 21 of the 92 sic call re uest forms in the sample, 2 percent, medical staff added a notation that the date recorded by the inmate as the ron date. In certain cases, the reason for the notation as clear (*e. .,* the date recorded by the

---

The volume of re uests for dental and mental health care is much smaller by comparison to re uests for medical care. In order to ensure a sufficient number of sic call re uests for dental and mental health care ere included in the analysis, *a* established a minimum number of each type to include in the sample.

The difference in the sample si es as principally attributable to the fact that the Defendants produced three mental health sic call re uests from the CT durin the revie period, all of hich ere included in the sample. At the CD , the Defendants produced a lar er number of mental health sic call re uests and *a* selected a sample of 11 mental health sic call re uests from that facility.

Dates are enerally recorded in t o places on sic call re uest forms. irst, there is a field labelled Date echa for the inmate to record the date s he fills out the sic call re uest form. Second, medical staff typically stamp each form ith a Received stamp and enerally, but not al ays, hand rite a date under the stamp. There is a third field in a portion of the form desi nated for the medical provider to fill out that also includes a date and a time field ho ever, these fields ere not completed in any of the sampled forms *a* revie ed. Ho ever, the EHR provides a record of the date and time of any clinical encounters bet een inmates and medical providers.

[8] Durin the sample selection process, *a* observed a si nificant number of sic call re uests ith no date recorded by the inmate. These forms ere e cluded from the sample because they ould not allo *a* to ma e any findin s re ardin timeliness.

inmate as a month *a ter* medical staff collected the form) ho ever, in most other cases, there as a difference of one or t o days bet een the date recorded by the inmate and the date recorded as received by medical staff. In these cases, the basis for the ron date notation as not evident.

1 Sic Call at the CDF

sample of sic call re uests submitted at the CD included 2 re uests for medical care, 1 re uests for dental care, and 11 re uests for mental health care. [9] analysis indicates that for all cate ories of sic call re uests combined, in 22 of 0 sic call re uests, 44 percent, inmates ere seen by a medical provider on the day they submitted their sic call re uest or the ne t day. An additional three sic call re uests, si percent, ere for medication refills and the prescriptions ere refilled the day after the sic call re uest as submitted ithout the inmate seein a medical provider.

Amon the 24 re uests for medical care, 1 re uests made by inmates (includin the three prescriptions that ere timely filled ithout the inmate havin to see a provider), 1 percent, received attention from a medical provider ithin one day of the submission of the sic call re uest.[40] Amon the remainin seven sic call re uests for medical care, five of the inmates ere seen bet een t o and five days follo in submission of the sic call re uest form and t o ere seen more than five days follo in the submission of the re uest form.

Althou h the sample of sic call re uests *a* analy ed included re uests for dental and mental health services, the sample si es for those sub roups ere not lar e enou h to reach

[9] One sic call re uest for medical care as e cluded from the sample because the date recorded by the inmate as subse uent to the date medical staff collected the form.

[40] ourteen of the 1 patients ere seen by a provider ithin one day. In the other three instances, the inmate re uested prescription refills for s in cream, eye ointment and nasal spray, respectively, and a provider ordered the refill ithin one day ithout seein the inmate.

meanin ful conclusions about the timeliness of provider responses to those subcate ories of re uests. Ho ever, because a number of inmates *a* intervie ed complained about delays in responses to sic call re uests for mental health and dental services, *a* revie ed the EHR related to 1 sic call re uests for dental services and 11 sic call re uests for mental health services at the CD . The findin s from those revie s are summari ed belo .

As e plained above, sic call re uests for dental services are tria ed and re uests that reflect pain, s ellin , or another indication of a possible infection are e pected to be seen by a medical provider ithin one day, or sooner if indicated.[41] Amon the 1 sic call re uests for dental care in the CD sample, three inmates ere seen by a sic call provider the day they submitted the re uest or the ne t day.[42] Amon the remainin 12 sic call re uests for dental care that did not result in a timely provider visit, seven re uests included reference to a chipped or bro en tooth, cavity, toothache, or a non-specific reference to isdom tooth. None of the inmates associated ith these latter cate ories of re uests ere seen by a provider ithin one day of submittin their sic call re uest. In the remainin five instances, the sic call re uest forms referenced the need for a dental cleanin , fillin , or simply stated dental.

Amon the 11 sic call re uests for mental health services in the CD sample, the inmates associated ith four re uests ere seen the day the re uest as submitted or the subse uent day. In the remainin seven instances, the inmate as seen any here from t o to si days after re uestin services. The table belo summari es the timeliness of sic call services at the CD .

[41] *ra* at 1 . While inmates ho indicate pain or s ellin are assi ned priority for services, the form does not as if the inmate is e periencin dental pain or s ellin , but leaves it up to the inmate to specify these symptoms.
[42] Only one of these three sic call re uests included a description by the inmate indicatin any pain or s ellin .

TABLE ONE SUMMARY OF LEN TH OF TIME TO BE SEEN BY PRO IDER AT CDF

MEDICAL	1		2	0
DENTAL			[4]	4[44]
MENTAL HEALTH	4		1	0
COMBINED	24	14	8	4

2 Sic Call at the CTF

At the CT , *a* sample included 2 re uests for medical care, 1 re uests for dental care, t o re uests for mental health care, and one re uest for both medical and mental health care. analysis indicates that at the CT , for 2 of all 41 of the sic call re uests, percent, inmates received attention from a medical provider on the day they submitted their sic call re uest or the follo in day. Amon the 2 re uests see in medical care, inmates associated ith 1 re uests, 0 percent, ere seen by aa medical provider ithin one day of the submission of the sic call re uest inmates associated ith si re uests, 24 percent, ere seen bet een t o and five days of the submission of the re uest and inmates associated ith four re uests, 1 percent, ere seen any here from si to 20 days after the submission date noted by the inmate on the re uest form.

[4] One of the five inmates did not appear for his appointment, hich as scheduled for 24 days after the sic call re uest as submitted.

[44] One of the four inmates as not seen ithin three ee s of his sic call re uest and t o inmates ere not seen ithin t o months of their sic call re uests as of December 1, 2020. The remainin inmate as released days after his re uest ithout bein seen.

Thirteen of the 41 re uests in the sample ere for dental services. Seven of those re uests resulted in inmates bein seen by a medical provider ithin one day after the re uest as submitted.[4] Amon the remainin si re uests for dental care, one re uest referenced dental pain and the inmate as not seen until three days after the re uest as submitted, three re uested dental cleanin s and t o ere non-specific re uests for dental services.

Amon the three sic call re uests for mental health care,[4] one resulted in an inmate bein seen the day after the sic call re uest as submitted. The inmates associated ith the other t o re uests received attention from a provider t o days and four days, respectively, after the re uest as submitted.

The table belo summari es the distribution of time bet een the submission of sic call re uest forms and inmates bein seen by a provider at the CT :

TABLE T O SUMMARY OF LEN TH OF TIME TO BE SEEN BY PRO IDER AT CTF

TYPE OF SER ICE RE UESTED	1 Da of Re est	2 Da s of Re est	More Than Da s of Re est	Not Seen b Provider
MEDICAL	1		4	0
DENTAL		4	2	0
MENTAL HEALTH	1	1	0	0
MEDICAL AND MENTAL HEALTH	0	1	0	0
COMBINED	2	12		0

[4] Si of those seven sic call re uest forms included a specific description indicatin pain, s ellin or a bro en or erodin tooth.

[4] One of the three as the sic call re uest that also included a re uest for medical care.

C Concl sion, Re irement One

The Defendants have invested additional resources in the sic call process by au mentin staffin in order to collect sic call re uest forms t ice daily and increase the number of providers available to assess and treat inmates at sic call. Inmates enerally had positive impressions of medical staff responses to sic call re uests for medical services ho ever, inmates reported delays accessin dental and mental health services throu h the sic call system.

These reports are enerally consistent ith the sample revie ed by *a* . At the CD , 1 percent of sic call re uests for medical services resulted in inmates bein seen ithin one day and at the CT , 1 percent ere seen ithin one day. reco ni e that there is some inherent mar in of error in these calculations for several reasons. irst, the timeliness of the responses to many sic call re uests could not be calculated because in identifyin a sample, *a* determined that a si nificant number of inmates did not record a date (or time) on the sic call re uest forms they submitted and therefore these forms ere automatically e cluded from the sample since timeliness could not be determined. Second, none of the sic call re uest forms included the time of submission and, as noted above, the form does not prompt inmates to record the time of submission. inally, it is possible that submission dates recorded on some sic call re uest forms are incorrect. Medical staff at times include a notation statin that the ron date as entered by the inmate on the re uest form. Ho ever, it as not possible for *a* to assess the accuracy of the submission date inmates recorded on the re uest forms nor the accuracy of the staff s ron date desi nation.[4]

[4] An advanta e of an electronic sic call re uest submission process ould be that it ould include data re ardin the date and time of each sic call re uest submission, hich could serve as an audit trail. This ould also eliminate the need for inmates to rely on correctional officers to provide sic call re uest forms. or some inmates, ho ever, the use of tablets to complete an electronic form could present a barrier to submission.

Additionally, did not revie lar e enou h samples to reach conclusions about the timeliness of responses to re uests for sic call related to dental and mental health needs. Ho ever, there is some indication that at least ith respect to dental services, there are delays in inmates accessin timely services. The dental sic call re uest system is desi ned so that inmates e periencin pain, s ellin , or other si ns of infection are seen ithin 24 hours, but in the absence any indications of these symptoms, inmates are not scheduled to be seen on sic call. If inmates are una are of the decision rules adopted by medical staff, inmates ho do have ur ent dental problems may submit a sic call re uest for dental services ithout includin the appropriate information to be seen timely.

Re irement T o

Defendants shall compl ith District of Col mbia and Centers for Disease Control re lations on social distancin in DOC facilities Defendants shall address challen es hich have prevented the implementation of social distancin incl din b t not limited to lac of ed cation and staffin shorta es Defendants shall provide the Co rt an pdate on their improvements to enforcin social distancin b UNE 2 , 2020

As e plained belo , the Defendants have continued to promote social distancin , but on oin limitations are evident. The a ency has bene unable to increase the complement of staff that is available for duty. These matters are e plained belo .

A Efforts to Promote Social Distancin

Current CDC uidelines applicable to detention and correctional facilities recommend implementation of social distancin strate ies to increase the physical space bet een incarcerated detained persons (ideally feet bet een all individuals, re ardless of symptoms), and to minimi e mi in of individuals from different housin units. [48] District of Columbia

[48] *ee* App. B, E . 1, Interim uidance on Mana ement of Coronavirus Disease 2019 (CO ID-19) in Correctional and Detention acilities, updated December , 2020, https: .cdc. ov coronavirus 2019-ncov community correction-detention inde .html,

re ulations related to social distancin in the conte t of the current pandemic are consistent ith this uidance.[49]

The DOC has continued to implement strate ies intended to reduce both the number of different inmates ho come into contact ith one another (*e. .,* by reducin opportunities for inmates from different housin units to interact ith one another) and the number of inmates ho interact ith one another at any iven time (*e. .,* by reducin out-of-cell time). As noted above, [0] at both the CD and CT , the DOC has continued to implement a medical loc do n, durin hich inmates are allo ed out of their cells one hour per day in small roups. [1] Department of Corrections mana ers and staff report that they limit the number of inmates out of their cells at one time in each housin unit to a ma imum of si inmates in addition to four inmates on or detail, ho are responsible for certain cleanin duties throu hout the day. [2]

Durin site visits, *a* observed variability in the number of inmates out of their cells at any time, ran in from one inmate to as many as 1 inmates. When inmates ere out of their cells, social distancin practices ere not consistent. Often *a* observed inmates con re ate in small roups to tal , sometimes hile not earin a mas properly coverin their noses and mouths. At other times inmates ho ere in common areas ould communicate ith inmates inside of cells throu h the pass throu h slot on the cell door, often hile in close pro imity and hile not earin a mas properly coverin both their noses and mouths.

---

[49] On November 1, 2020, a as ed counsel for both parties to identify the D.C. re ulations that ould fall ithin the scope of this re uirement. ere informed by the Defendants that on March 1, 2020, the Department of Health issued Emer ency Rule-ma in to order persons to stay at home due to the pandemic. The re ulation included this definition of social distancin re uirements: Social Distancin Re uirements means maintainin at least si ( ) foot social distancin from other individuals. D.C. Re . 829- 8 (Apr , 2020) (amendin 22B DCMR Sections 220 and 229.1). Mayor s Order 2020-0 (une 19, 2020) adopts this definition as ell. Mayor s Order 2020-0 at Section II. 1.

[0] *ra* at 9.

[1] Inmates confined on se re ation housin units are loc ed do n for 24 hours on ee end days.

[2] The cleanin activities performed by the inmate or details supplement the cleanin performed by the contractors ho perform daily cleanin on the housin units.

DOC e ecutive staff and other mana ers have informed *a* that they e pect correctional officers to enforce social distancin re uirements or potentially be sub ect to personnel action. They have e plained that a Correctional Surveillance Center Team (CSC Team) monitors video feeds from both facilities around the cloc . Team members are responsible for, amon other matters, reportin to DOC e ecutives if social distancin on housin units is not bein enforced. visited the CSC Team video monitorin center. Accordin to CSC Team staff, the CSC Team as instructed in March or April 2020 to monitor video feeds and identify instances of inmates not earin mas s and or not properly social distancin and for staff not earin mas s, shields, or enforcin social distancin re uirements. CSC Team staff reported that violations of these CO ID-19-related miti ation re uirements are fre uent and that the CSC Team may see as many as 100 e amples per shift. Information provided to *a* by the DOC Deputy Director of Operations, to hom the CSC Team reports, indicates that bet een April and November 29, 2020, appro imately 4 disciplinary actions ere ta en a ainst staff for violations of CO ID-19 re uirements, 84 percent of hich ere based on CSC Team observations. While less fre uent than amon inmates, durin recent site visits *a* observed correctional staff at times not earin re uired mas s and or face shields on housin units and not maintainin social distances amon themselves and hen interactin ith inmates and other non-correctional DOC staff. [4]

The DOC has ta en steps to provide additional educational materials to inmates re ardin CO ID-19 and the importance of social distancin . Si na e has been placed throu hout both

---

received a summary of the DOC s analysis of the data, but not the underlyin data itself and thus *a* did not independently analy e this data.

[4] or e ample, at one point durin a site visit, *a* observed correctional officers respond to a medical emer ency. A ser eant ho responded to the emer ency, entered the housin unit ithout a face shield. He as offered a shield by a collea ue, but he refused to ear it.

facilities remindin inmates and staff to remain at least si feet apart. Additionally, DOC e ecutive staff report that be innin in March 2020, educational materials are distributed to every inmate s cell every Wednesday and those materials at times include information related to CO ID-19.

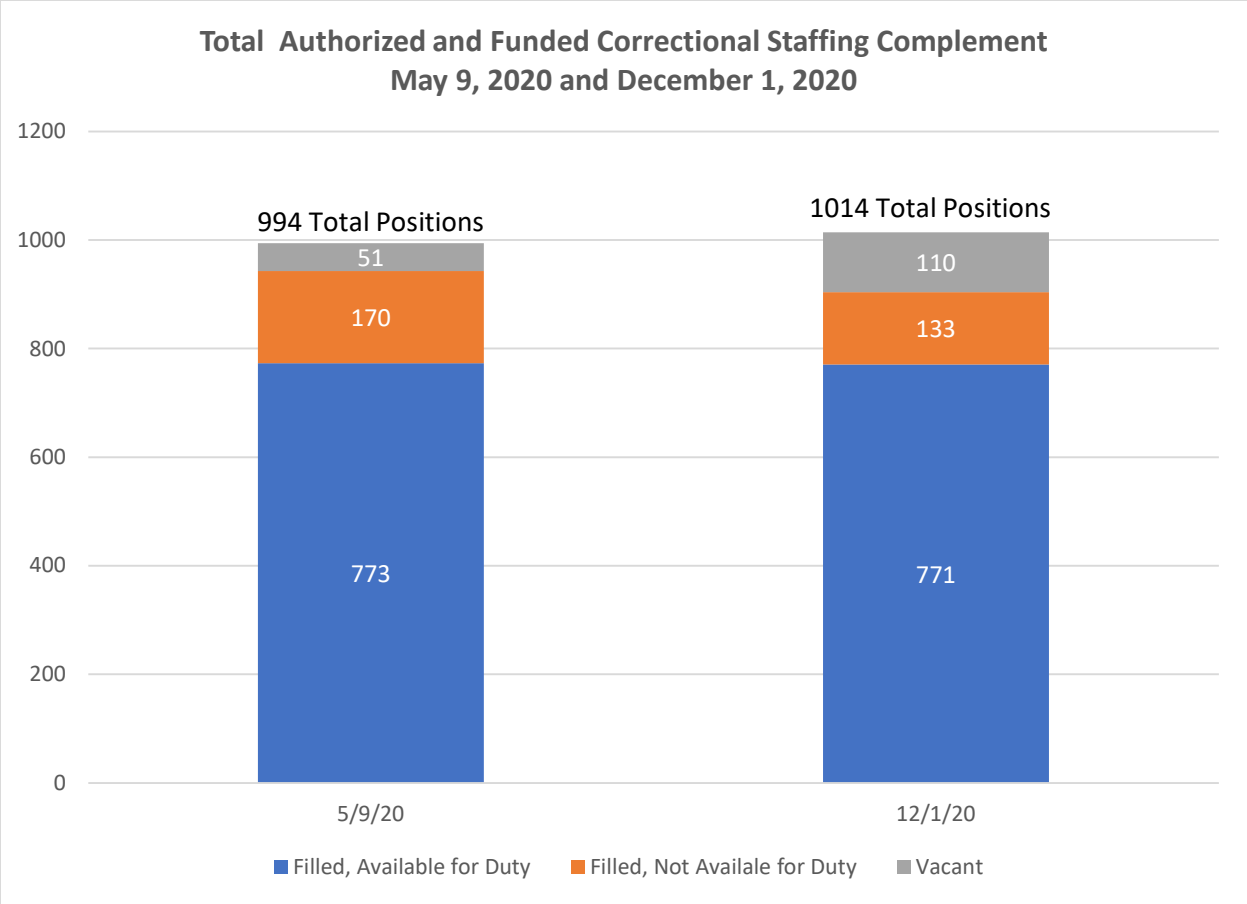
More recently, startin at the end of September 2020, the DOC idely distributed electronic tablets intended for educational purposes to inmates at the CD and CT . Distribution of the tablets is e pected to be completed by December 14, 2020. The tablets, hich are available to all inmates e cept those on inta e or se re ation status, may be used daily bet een 9:00 a.m. and 11:00 p.m. Amon other content, the tablets include educational materials re ardin CO ID-19, includin a Quic uide to CO ID-19, a Response to CO ID-19: Survival uide, and instructions on Wearin Personal Protection E uipment.

inally, ith respect to staffin , since *a* last report in May 2020, the DOC received authori ation and fundin for 20 additional correctional officer positions ho ever, as e plained above, [8] as of December 1, 2020, the si e of the correctional or force that is available for duty has remained essentially unchan ed. While the number of staff on unavailable for duty status decreased by , from 1 0 to 1 staff unavailable bet een May 9 and December 1, 2020, the number of vacant positions increased by 9, from 1 to 110 position. [9] Conse uently, the number of staff available for duty remained virtually unchan ed. The chart belo compares staffin levels on May 9 and December 1, 2020.

E . A, Quic uide to CO ID-19.
E . B, Response to CO ID Survival uide.
E . C, Wearin Personal Protective E uipment.

[8] *ra* at 2 -2 .

[9] T enty of the 9 positions ere ne ly authori ed positions in fiscal year 2021, hich be an on October 1, 2020.



B Concl sion, Re irement T o

Since the issuance of the preliminary in unction, the DOC has continued to adopt operational practices to encoura e social distancin . These practices have resulted in substantial restrictions in the time inmates spend out of their cells. While fe er inmates are out of their cells at any time than they ould other ise be in the absence of the out-of-cell time restrictions, inmates ho are out of their cells often do not maintain si feet of social distance. also observed staff members not maintainin social distance on housin units and else here throu hout both facilities. Personal protective e uipment, includin mas s for every inmate, as idely available and ith fe e ceptions inmates donned mas s. re uently, ho ever, mas s ere not properly coverin both the inmates noses and mouths. Althou h *a* observed some staff not earin appropriate PPE, these incidents ere infre uent.

As part of their effort to miti ate the spread of CO ID-19, the DOC has made educational materials available to inmates in both hardcopy format and, more recently, electronically on ne educational tablets that have been idely distributed to inmates at both facilities. Staffin limitations have persisted, creatin challen es that impede miti ation efforts.

Re irement Three

Defendants shall contin e the services of their ne l contracted environmental health and safet vendor Defendants shall f rther contin e their contract to provide CO ID 1 cleanin services on the sec re and non sec re sides of the DOC facilit , incl din the common areas of all ho sin nits Defendants shall f rther contin e their efforts to hire a re istered sanitarian Defendants shall ens re that inmates have access to the necessar materials to clean their cells, incl din cleanin sol tions hich protect a ainst CO ID 1 and ade ate cleanin textiles and tools Defendants shall f rther ens re that DOC staff and inmates are informed of and trained on the proper techni es for mixin and preparin cleanin sol tions as necessar Defendants shall provide the Co rt an pdate on their improvements to sanitation b UNE 2 , 2020

The Defendants implementation of the re uirements related to environmental health and safety is described belo .

A The Environmental Health and Safet endor and Contract Cleanin Services

The DOC s contract for environmental health and safety services be an in May 2020 and included an initial term of three months, ith three one-month options to e tend. [0] The contract included the services of a sanitarian. In mid-Au ust 2020, the Defendants e ercised an option to e tend the contract throu h October 1, 2020, at hich point the contract e pired. [1]

Durin the term of the contract, a sanitarian employed by the vendor developed a cleanin and disinfectin protocol [2] to provide uidance to the cleanin companies that the

[0] *ee Ma , e rt*, E . 10 for a copy of the contractual a reement the Defendants entered for environmental health-related services.
[1] E . 4A, Au ust 18, 2020 Modification of Contract CW82 , e tendin the contract period to October 1, 2020).
[2] E . 4B, SARS-Co -2 (CO ID-19) Disinfection and Cleanin Protocols.

DOC contracted ith in response to the April 19, 2020 Temporary Restrainin Order (TRO), (D t. No. 48), and later conducted site visits to monitor implementation of cleanin practices at the CD and CT . The vendor issued a total of four inspection reports, t o in uly 2020, [4] one in September 2020, and one in October 2020.

Department of Corrections mana ement informed *a* that the vendor s services ere not e tended beyond October 1, 2020 because the a ency anticipated the environmental health and safety services provided by the vendor ould be performed by a soon-to-be-hired DOC employee ho ould perform ob duties associated ith a sanitarian position. As discussed belo , the individual the Defendants hired to provide these services as not a re istered sanitarian and did not have the trainin , e perience or credentials to perform the same functions that ere performed by the contracted sanitarian. In response to the concerns raised about this matter at the November 9, 2020 hearin , DOC mana ement recently informed a that the a ency has decided to contract ith the environmental health and safety vendor hose contract e pired on October 1, 2020 and reinstitute its efforts to hire a re istered sanitarian. On December 11, 2020, the filin date of this report, the Defendants submitted documentation to *a* indicatin they had entered into a contract ith the vendor for a three-month period, ith

---

[63] An Amended Order filed on April 19, 2020 corrected an error in the initial Order that as issued. The error as based on a typo raphical error in *a* initial April 2020 report, hich *a* corrected. The Amended Order addressed professional cleanin services on the secure side of the facility, and in relevant part states: In addition to en a in a sanitarian, the defendants shall consider contractin for professional cleanin services on the secure side of the facility, at least until a sanitarian is hired to bolster the e istin environmental health and safety pro ram at both facilities. (D t. No. 0).

three one-month option periods. The Defendants report that the vendor intends to schedule an inspection before December 2 , 2020.

The Defendants continued the contracts for cleanin services on the secure and non-secure sides of the CD and CT , includin common areas of the housin units. Since e ecutin the contracts on an emer ency basis in May 2020 for an initial three-month period, the Defendants have e tended the contracts repeatedly for short periods, typically for one to three months at a time. In a November 2 , 2020 e-mail communication to a DOC e ecutive, the Chief Procurement Officer at the D.C. Department of eneral Services, the a ency responsible for contractin on behalf of the DOC for cleanin services at the CD and CT , approved e tension of the DOC cleanin contracts to ebruary 2021, statin his office ould or ith its Bud et Team to ensure fundin is secured to ensure compliance ith the Court Order. [8] In addition, he stated that the contracts should be revie ed in anuary 2021 to ensure that the Court Order is still valid and if so e may need to prepare a competitive solicitation in anuary if e must continue the contract beyond ebruary 2021. [9]

The cleanin contractors at the CD and CT are e pected to follo the disinfection and cleanin protocols developed by the DOC s environmental health and safety vendor. The contractors ere observed and evaluated by the DOC s contracted sanitarian on multiple occasions bet een uly and October 2020. Based on *a* intervie s and observations, it appears that by and lar e the contractors clean all of the re uisite areas of the facilities every day. Common areas and public spaces on both the secure and non-secure sides of the facilities

[69] *d.*

appeared noticeably cleaner than *a* observed durin previous site visits at both the CD and the CT . Department of Corrections mana ers and staff also reported a consistent improvement in facility cleanliness attributable to the contract cleanin teams.

B Hirin Re istered Sanitarian

The Defendants posted a position vacancy announcement for a sanitation inspection specialist on si dates bet een May 21 and October , 2020. [0] The ualifications and educational re uirements for the posted position do not meet the eli ibility re uirements to sit for the re istered sanitarian e amination administered by the relevant credentialin body. [1] Department of Corrections mana ement has informed *a* that the a ency elected to post a sanitation inspection specialist vacancy rather than a sanitarian position vacancy in order to e pedite the hirin process. Accordin to DOC mana ement, because the sanitarian position did not already e ist, additional administrative or ould be re uired to develop a ob description and classify the position and these activities ould delay fillin the vacancy.

A revie of publicly available information concernin District of Columbia overnment employees indicates that as of September 0, 2020, there ere District employees ith the title sanitarian, 4 of hom or ed for the Department of Health, and t o of hom or ed for the Department of Youth Rehabilitation Services and the Child and amily Services A ency, respectively. Additionally, *a* found a Department of Health ob vacancy announcement for a sanitarian position that as posted in anuary 2020 [2] ho ever,

[0] E . 4 , Sanitarian Inspection Specialist ob description and vacancy announcement posted on the follo in dates: May 21, 2020 une 1 , 2020 uly , 2020 uly 1, 2020 September 18, 2020 and September 29, 2020

C Access to Cleanin Materials and Related Trainin

There as a si nificant improvement in inmate access to appropriate materials to clean their cells since *a* prior site visits. The Defendants no provide inmates ith a pero ide-based cleanin and disinfectin solution and clean microfiber cloths are delivered to housin units t ice daily. At the CD , inmates and staff reported that they are re uired to clean their cells ith these materials in the mornin at the start of the shift. At the CT , inmates reported that they had access to bottles of pero ide solution and microfiber cloths hen they ere allo ed out of their cells. observed that an appropriate supply of clean microfiber cloths and bottles of pero ide solution ere available on every housin unit visited and inmates and staff consistently reported that they had access to the clean cloths and solution on a daily basis.

The pero ide solution is purchased by the DOC in a concentrated and hi hly corrosive form. It is mi ed by desi nated environmental officers prior to its distribution to housin units. The dilution of the concentrated form of the solution is performed by a machine pro rammed to add a specified amount of ater in order to dilute the solution to levels prescribed by the manufacturer.

DOC mana ers, detail inmates, and some housin unit staff have reported that inmate detail or ers and correctional officers assi ned to the housin units have been trained on cleanin protocols. The trainin , hich as conducted by the DOC Compliance and Revie

Office, as based on the cleanin protocols developed by the contracted environmental health and safety vendor.

Re irement Fo r

Defendants shall ens re that conditions in isolation nits are non p nitive This incl des ens rin reliable and re lar access to le al calls, personal telephone calls, dail sho ers, and clean clothin and clean linens to all inmates on isolation stat s Defendants shall provide the Co rt an pdate on their improvements to conditions in isolation cells b UNE 2 , 2020

Since une 18, 2020, hen the preliminary in unction as issued, there have been no isolation units in operation at the CT ho ever, an isolation unit has operated on a limited basis at the CD durin this period.

As e plained in more detail belo in the narrative related to testin re uirements, a total of 11 inmates tested positive for CO ID-19 at the CD bet een une 18, 2020 and December 1, 2020. All but one of these cases ere identified as a result of testin conducted at the time of admission, and the last one appears to have been the result of a ne ly admitted inmate ith CO ID-19 ho as placed on the mental health unit upon admission and infected another inmate. [8] DOC records indicate that upon receipt of a positive test result, each member of this cohort as transferred to NO-2, the unit at the CD desi nated for inmates on medical isolation status.

Since the time that the preliminary in unction as issued, there have been a limited number of inmates on isolation status. Unli e the conditions that ere evident before the temporary restrainin order as issued, it appears that inmates on isolation status are able to ma e personal telephone calls, ta e daily sho ers, and receive clean clothin and clean linens

---

ra at 9 - 4 .

[8] This matter is addressed *ra* at 41.

on a ee ly basis. [9] There is, ho ever, some very limited evidence indicatin that inmates on isolation status may not have access to confidential le al calls.[80]

Re irement Five

Defendants shall ens re that all inmates have access to confidential, nmonitored le al calls of a d ration s fficient to disc ss le al matters Insofar as inmates access to confidential, nmonitored le al calls is reliant on the se of ne technolo , Defendants shall s iftl implement the se of s ch technolo

In the conte t of this re uirement, t o different cate ories of le al calls should be considered: attorney-initiated le al calls and inmate-initiated le al calls. The various processes and practices applicable to each cate ory are discussed separately belo .

A Attorne Initiated Le al Calls

Currently, pursuant to a process initiated in April 2020 in response to the pandemic, an attorney can re uest a le al call ith a client confined at the CD or the CT by sendin an email to the DOC case mana ement office. DOC case mana ement staff report that these calls, hich are referred to as emer ency le al calls, are enerally scheduled for a 0-minute period, but the duration may be e tended for up to one hour or more if the attorney re uests additional time.[81] After submittin a re uest, attorneys are advised of the day they ill receive a le al call from the client but not the precise time that the client ill contact them.

Reports from DOC mana ement related to the volume of attorney-initiated emer ency le al calls indicate that a hi h number of le al calls are processed on a monthly basis at both

---

[9] ere only able to intervie one inmate ho as recently on isolation status. Based on this intervie and discussion ith medical, correctional and mana ement staff, it appears that since the preliminary in unction as issued, in the limited instances in hich an isolation unit has been operated at the CD , inmates have had access to personal telephone calls, daily sho ers, clean clothin and clean linens.

[80] One inmate on isolation status reported that hile he as able to spea by telephone to his la yer in the case mana er s office, a correctional officer remained in the office durin the telephone call.

[81] ere told that the re uest for additional time must be made in the initial email.

the CD and CT .[82] Bet een April 20, 2020 and October 1 , 2020, DOC mana ement reports that case mana ers ere responsible for facilitatin 8, 02 emer ency le al calls.[8] Durin this period, DOC mana ement reports that the avera e daily volume of emer ency le al call re uests per month ran ed from a lo of 0 calls to a hi h of 8 calls, and the avera e number of case mana ers ho ere present at both facilities to facilitate these calls durin this period as 1 .[84]

Each housin unit has an assi ned case mana er. Many case mana ers are assi ned to cover multiple housin units. As of early November 2020, the DOC had a total of funded case mana er positions, nine of hich ere vacant. Pursuant to the emer ency call re uest process initiated in April 2020, each ee day mornin case mana ers receive a list of emer ency le al calls that they are assi ned to facilitate that day. Case mana ement staff report that most if not all of their or days are devoted to facilitatin attorney-initiated emer ency le al calls. As a result, they are unable to re ularly perform many of their other ob duties,[8] includin the timely processin of inmate-initiated re uests for le al calls, hich are described in more detail belo .[8]

---

[82] E . A, chart submitted by DOC Director of Pro rams and Case Mana ement, e al Calls, Emer ency Calls to Private and Public Attorneys, April 20 - October 1 , 2020 (sho in for the 10-day period bet een April 20 and 0, 2020, attorneys re uested 448 le al calls of hich 8 ere completed for the month of May 2020, attorneys re uested 1,28 le al calls of hich 1,0 ere completed for the month of une 2020, attorneys re uested 1, 0 le al calls of hich 1, 41 ere completed for the month of uly, 2020 attorneys re uested 1, 2 le al calls of hich 1,410 ere completed for the month of Au ust 2020, attorneys re uested 1,41 le al calls of hich 1, 1 ere completed for the month of September 2020, attorneys re uested 1, 2 le al calls of hich 1, 4 ere completed and for the 1 -day period bet een October 1 and 1 , 2020, attorneys re uested 8 1 le al calls of hich 89 ere completed).

[84] *d.*

[8] In addition to le al calls, case mana ers are responsible for inmate classification, reclassification, and facilitatin various types of inmate re uests for records and services.

[8] *ra* at 8 - 9.

In instances in hich attorneys contact the DOC case mana ement office to re uest a le al call, the calls are conducted in one of the follo in ays at both the CD and CT : 1) in the case mana er s office ith the case mana er present 2) in the inmate s cell usin a cellular telephone and) in an empty cell on the housin unit usin a cellular telephone. At the CD , these le al calls are also conducted in an office in the facility s case mana ement suite.[8] received some conflictin information about hether case mana ers are present hen a le al call is conducted in a case mana er s office. Ho ever, most of the inmates and case mana ers intervie ed confirmed that the case mana er is present in the office hen these calls are conducted, hich is consistent ith the observations that *a* have made.

As of mid-November 2020, attorney-initiated emer ency le al calls ere bein conducted via cell phone in individual cells at both the CD and CT .[88] Department of Corrections mana ers report that the introduction of the cell phones and handsets initially presented connectivity and other challen es that have lar ely been overcome. or the most part, inmates and staff report that the use of the cell phones in individual cells affords inmates the opportunity to spea in a confidential settin ith their attorneys.[89]

Attorneys can also re uest to spea to their clients at the CD and CT via

---

[87] Durin an intervie *a* conducted in the case mana ement suite, an inmate as observed sittin in the door ay of an open office reportedly spea in to his attorney ithin audible distance of correctional and case mana ement staff.

[88] The Defendants purchased 0 cell phone and 10 ireless handsets for this purpose on May 1, 2020. All e uipment has been delivered. *ee* E . C, Order Confirmation, irst Net, Order No. 8 40299 (cell phones) E . D, Proof of Delivery, endor Ac no led ement Acceptance orm, September 0, 2020 (ireless handsets). Records related to the delivery of the cell phones and the order for the handsets ere re uested but not available. Accordin to case mana ement supervisors and staff, as of mid-November 2020, nine cell phones ere available for use (si at the CD and three at the CT). In addition, seven ireless handsets and nine non- ireless handsets ere also available. Department of Corrections mana ement reports that the remainin 41 cell phones ill be deployed after the Defendants receive the supplies necessary to secure them in loc ed bo es. Department of Corrections staff report that the bo es, hich are used for the nine phones that are in use, are intended to ensure that the cell phones are not dama ed or used for unauthori ed purposes.

[89] Some inmates reported that they could be overheard by inmates confined in ad acent cells hen spea in from their closed cells.

videoconference. These conferences are scheduled for a specific ee day time period by staff in the DOC eneral Counsel s Office. The Defendants report that bet een May 18, 2020 and October 1, 2020, the eneral Counsel s Office coordinated a total of 1,209 videoconferences for inmates at the CD and CT . Desi nated correctional staff have been trained to help inmates use the videoconference technolo y. have observed and participated in these videoconferences, hich are conducted under conditions that promote the confidentiality of attorney-client communications.[90]

B Inmate Initiated Le al Calls

Inmates at the CD and CT can initiate le al calls ith their attorneys by submittin an oral or ritten re uest to the case mana er assi ned to their housin unit.[91] Inmates reported substantial delays receivin responses to these re uests. i e the attorney-initiated le al calls, these calls can be conducted in the case mana er s office ith the case mana er present or in a cell on the housin unit. In addition, inmates can ma e free le al calls to their attorneys durin the one-hour daily recreation period, usin the phones mounted on the alls in the day rooms.[92] While the DOC reports that these calls are unmonitored, they are not confidential.

The DOC Office of eneral Counsel reports that inmates at the CD have been able to ma e confidential and free le al calls from their cells usin tablets provided by the vendor that

[90] In instances in hich counsel re uires a client to revie documents or other materials, they are able to do so on a confidential basis durin the videoconference. Additionally, DOC staff report that attorneys can send documents to case mana ers and the eneral Counsel s Office for transmission to inmates for revie .

[91] See E . 2C, *ra* note 1, Sample Inmate Re uest Slip. Inmates can obtain these forms, hich are used to re uest le al calls, amon other re uests, from correctional staff and case mana ers. After the forms are filled out, inmates are re uired to place them in a bo here they are pic ed up periodically by the case mana ement staff. Some of the case mana ers *a* intervie ed reported that they had difficulty eepin up ith these re uest forms.

[92] Defendants report that these calls are free and unmonitored as lon as the attorney s name and telephone number have been appropriately re istered in the system.

provides telephone services at the CD .[9] Bet een une 18 and December , 2020, the eneral Counsel s Office reports that 4 le al calls ere made usin these tablets at the CD . In addition to telephone communications, inmates can use the DOC-issued educational tablets to communicate ith their attorneys usin a confidential electronic messa in platform. As of November 0, 2020, DOC mana ement reports that 18 inmates and 1 attorneys have used the messa in platform.

C Concl sion, Re irement Five

The Defendants have made a substantial investment in ne technolo y to address the attorney-client communication challen es that have emer ed as a result of the pandemic. In addition, they have repurposed space in different parts of the CD and CT in order to accommodate confidential attorney-client videoconferences. Moreover, in an effort to ensure the technolo y is used appropriately, correctional staff assi ned to ne ly created videoconferencin posts have received trainin on s ills that ere not contemplated by their ob descriptions. inally, case mana ement ob responsibilities have been restructured in order to prioriti e the volume of attorney-client telephone and video communications associated, at least in part, ith the reported and substantial decrease in attorney visits to the CD and CT .

Re irement Six

Finall , the Co rt notes that Defendants have increased testin for CO ID 1 , no testin an resident to be transferred to Saint Eli abeths Hospital or to a federal correctional facilit Defendants also test an

[9] Unli e the educational tablets provided to inmates by the DOC, the tablets provided by the vendor contain paid content. The tablets furnish inmates at the CD ith the ability to ma e telephone calls to the same approved contacts they are allo ed to contact from the telephones in the dayrooms, includin their attorneys. Currently, these tablets are only available in limited uantities at both facilities. Ho ever, althou h inmates at the CT also have access to these tablets, they cannot use the telephonic functionality because a different vendor has the contract for telephone services at the CT and these services are currently unavailable under that contract.

cell mate of an inmate ho tests positive and all ne residents pon inta e Defendants contin e to test those inmates ho report positive for CO ID 1 s mptoms The Co rt ORDERS that Defendants contin e implementin this increased testin The Co rt f rther ORDERS that Defendants pdate the Co rt on an chan es to the testin protocol at DOC facilities, incl din the f rther testin of as mptomatic inmates

The Defendants report that they administer CO ID-19 tests to inmates in the follo in circumstances: upon admission prior to certain transports, includin transports to court if inmates are symptomatic and, to any cellmate of an inmate ho tests positive for CO ID-19. In addition to inmate testin , DOC representatives also reported that be innin in October 2020, the Department of Health be an ma in CO ID-19 testin available to DOC staff on-site every t o ee s. The testin as made available durin hours that included the mornin shift chan e to ma imi e the number of staff ho could ta e advanta e of the testin .

A Testin of Ne l Admitted Inmates

or ne ly admitted inmates, the Defendants report that their protocol is to administer a rapid CO ID-19 test and a lab test simultaneously to each inmate upon inta e.[94] An additional lab test is administered to each inmate at least seven days later[9] hile the inmate remains housed in the Inta e unit.[9] Once cleared by medical staff, inmates may be moved from the Inta e unit into other housin units. If an inmate tests positive for CO ID-19, they are transferred to housin units desi nated for inmates on isolation status.

---

[94] The lab test reportedly has a hi her sensitivity in detectin SARS-Cov-2 ho ever, results ta e lon er to process. Thus, a rapid test is administered at the same time and the test results are available shortly after the test is administered. If the rapid test returns a positive test result, the inmate is isolated sooner than s he ould other ise be if a lab test alone ere administered. Inmates ho refuse testin at the time of admission are cell restricted until medical staff clear them.

[9] This process is intended to identify inmates ho may have been CO ID-19 positive upon admission, but ho ere still in an incubation period ith viral levels that ere too lo to detect at the time of the initial test administrations.

[9] Inmates ith acute mental health needs are moved to a speciali ed unit and do not remain on the Inta e unit. Women are admitted at the CT .

obtained CO ID-19 testin data throu h November 0, 2020 from Unity representatives ho maintain clinical testin data. Accordin to that data, over the 1 days bet een une 18, 2020 and November 0, 2020, the Defendants administered 2, 1 tests to inmates, an avera e of 1 . tests per day. Additionally, tests ere administered on 91 percent of the days durin the period.

The testin records indicate that there ere a total of 11 positive tests durin the period, four in uly, t o in Au ust, four in September, none in October, and one in November. All ere at the CD . Ten of the 11 positive tests ere detected by a CO ID-19 test administered upon admission to the facility. Of those 10 inmates testin positive, nine ere housed in SO-2 initially, the Inta e unit, or ere immediately placed in the isolation unit, NO-2, before spendin a ni ht in SO-2. The 10th case involved an inmate ho as placed on the mental health unit, SO- , upon admission. When his initial test result came bac positive, he as moved to the isolation unit.

The final positive case as not a ne admission, but rather involved an inmate ho as housed on the mental health unit for an e tended period. He as housed on the mental health unit durin the period hen the ne ly admitted inmate referred to above (*.e.,* the 10th positive case) tested positive. The day after the ne ly admitted inmate received his positive test result, the entire mental health unit as tested. One inmate on the unit as confirmed positive four days later and he as transferred to the isolation unit.

B Testin of Inmates Transferred to Saint Eli abeths Hospital

obtained data re ardin all transfers to Saint Eli abeths Hospital for the period une 18 to October 1, 2020. There ere a total of 24 transfers to that facility.[9]

[9] Accordin to DOC staff, inmates may be transferred to Saint Eli abeths either as a permanent placement or on a temporary basis pendin a mental health assessment.

intervie ed DOC and Unity representatives re ardin the prerelease and CO ID-19 testin processes applicable to inmates released to Saint Eli abeths.

Accordin to Unity representatives, inmates ho are released to Saint Eli abeths are tested for CO ID-19 in advance of their transfer if Unity staff are notified in advance of the transfer. Unity and DOC records office staff reported, ho ever, that they often are not notified in advance of an inmate transfer to Saint Eli abeths. cross referenced the names of the 24 inmates ho ere transferred to Saint Eli abeths durin the revie period ith CO ID-19 testin data. T enty t o of the 24 transferred inmates ere tested for CO ID-19 hile in DOC custody *at e t* prior to their transfer to Saint Eli abeths ho ever, in most cases the testin as not conducted in close temporal pro imity to the transfer. Department of Corrections records indicate that seven of the 20 inmates ere tested ithin the ee prior to the transfer four additional inmates ere transferred bet een one and t o ee s prior to the transfer and the remainin 11 inmates ere tested bet een 24 and 128 days prior to the transfer to Saint Eli abeths. T o inmates transferred to Saint Eli abeths durin the revie period ere not tested at all prior to the transfer.

C Testin of Inmates Transferred to Federal Correctional Facilities

obtained data re ardin all transfers to the United States Marshals Service for the period une 18 to October 1, 2020: There ere a total of 1 transfers. intervie ed Unity staff re ardin CO ID-19 testin practices prior to inmate transfers to federal facilities, includin Unity staff involved in the health clearance process for inmates ho are released to the custody of the Marshals Service. Accordin to Unity staff, there is a defined process established by the Marshals Service for releasin inmates to their custody, hich Unity follo s. Unity staff are re uired to complete a Prisoner in Transit Medical

Summary form for each inmate scheduled to be transferred.[98] Unity staff e plained that at some point in early 2020, a ne section, Section , Mandatory Symptom Screenin for CO ID-19 Prior to Departure rom acility, as added to the form. This ne section includes a record of the inmate s temperature, three screenin uestions, and criteria for a certifyin health authority to medically clear the inmate for transfer. The form does not re uire a CO ID-19 test prior to release and Unity staff stated that in practice, they complete the form for each inmate released to the Marshals Service, but do not complete a CO ID-19 test as a matter of course. Unity representatives clarified that if a re uest is made to administer a CO ID-19 test (*e. .,* by the facility to hich the inmate ill be transferred), they ill conduct the test.

cross referenced a random sample of of the 1 inmates transferred to the Marshals Service bet een une 18 and October 1, 2020 ith CO ID-19 testin data. T enty-one inmates received a CO ID-19 test at some point prior to their release to the custody of the Marshals Service and 12 inmates did not. Amon this cohort, three inmates received a CO ID-19 test ithin the month prior to their release (ran in from 14 days to 28 days prior to release) and the remainin 18 inmates received a test more than one month prior to their release (ran in from days to 181 days).

D Testin of Cellmates of Inmates ho Test Positive

As noted above, the Defendants report that cellmates of all inmates ho test positive for CO ID-19 are tested. Of the 11 inmates ho tested positive for CO ID-19 bet een une 18 and October 1, 2020, one inmate had a cellmate. The t o inmates ere housed in a cell in the Inta e unit. Testin records indicate that the cellmate of the inmate ho tested positive

[98] E . , Prisoner in Transit Medical Summary redacted . This form is referred to as orm .

as tested the same day his cellmate received a positive test result and his test result as ne ative.

E Testin of Inmates ho Report CO ID 1 S mptoms

inally, *a* revie ed a sample of 49 sic call re uests submitted bet een une 18 and October 1, 2020 that reflected reported symptoms consistent ith CO ID-19 symptoms identified by CDC uidelines and or reflected in Unity s reported symptom-based testin practices.[99] orty-three of the sic call re uests ere submitted by inmates confined at the CD and si ere submitted by inmates confined at the CT . Because 1 of the sic call re uest forms did not include the date the inmate submitted the form, they ere e cluded from the analysis.

Amon the remainin sic call re uests in the sample, 2 ere from the CD and four ere from the CT . ourteen of the inmates ho submitted the sic call re uests, 9 percent, ere tested for CO ID-19 at some point after they submitted their sic call re uest. ive of the 14 tests ere administered ithin t o days of the submission of the sic call re uest and one as administered five days after the submission of the sic call re uest.[100] The remainin ei ht tests ere administered bet een 20 and 2 days after the sic call re uests ere submitted. There is no indication in the EHR maintained for these inmates that these ei ht tests ere administered in response to the sic call re uests that reported CO ID-19 symptoms. Amon the 22 inmates ho ere not tested after reportin symptoms, 1

[99] *ee* App. B, E . 1, supra note 49 (Symptoms of CO ID-19 include cou h, shortness of breath or difficulty breathin , fever, chills, muscle pain, sore throat, and ne loss of taste or smell . Other less common symptoms have been reported, includin nausea and vomitin .) Symptoms noted in the sampled sic call re uests included, but ere not limited to, the follo in : cou hin shortness of breath difficulty breathin fever nausea vomitin loss of appetite headache and or body aches chills and sore throat. Inmate re uests for CO ID-19 tests ere also included in the sample.

[100] Three sic call forms e plicitly included a re uest for a CO ID-19 test: one reported shortness of breath, one reported upset stomach and vomitin , and one reported nausea and loss of appetite.

received a CO ID-19 test at some earlier point in their confinement and five ere not tested for CO ID-19 durin their confinement.

intervie ed Unity s Medical Director re ardin clinical e pectations for testin inmates ho report symptoms consistent ith CO ID-19. The director pointed out that there are some cases in hich there are sound medical e planations for the symptoms the inmate is e periencin consistent ith somethin other than CO ID-19.[101] The director also ac no led ed that providers have some clinical discretion in decidin hen to administer a CO ID-19 test to inmates reportin CO ID-19 symptoms, but she indicated that if there is no obvious or clear e planation for the symptoms, a CO ID-19 test should be administered.

did not assess the clinical decisions made by providers ith respect to administerin CO ID-19 tests for reportedly symptomatic inmates, hich seemed beyond the scope of this appointment and ould have re uired consultation ith a medical e pert.

A revie of the EHR maintained for inmates in the sample sho s that in si cases, the inmate reported durin the sic call visit that the CO ID-19-li e symptoms reflected on the sic call re uest form as resolved and in five other cases the inmate reported that s he had re uested to be seen in sic call for other reasons despite notin symptoms of CO ID-19 on the sic call re uest form.[102] The revie of the sampled cases also sho various dia noses reached follo in the sic call visit, such as asthma, constipation, aller ies sinusitis, and acid reflu astrointestinal reflu disease. In none of these cases, as there documentation in the EHR that CO ID-19 as suspected but testin as not done.

[101] The director cited as e amples inmates dia nosed ith Crohn s disease reportin astrointestinal symptoms and inmates dia nosed ith asthma reportin a cou h. In cases such as these, a provider mi ht conclude the symptoms ere related to the dia nosed chronic condition rather than CO ID-19.

[102] These other reasons included re uests for foot cream, medicine for heartburn or treatment for constipation.

F Timeliness of Testin Res lts

Durin the November 9, 2020 hearin , the Plaintiffs in uired hether *a* ere a are of any delays in receivin testin results from laboratories. have revie ed the available data re ardin elapsed days from test administration to receipt of testin results. Amon the 2, 1 tests administered bet een une 18 and October 1, 2020, data ere available for 9 percent of the test results. Be innin in Au ust 2020, the date test results ere received as recorded much less fre uently than durin une and uly 2020. ere not able to determine hether the tests ith data sufficient to calculate the number of elapsed days bet een test administration and receipt of testin results (*.e.,* the 9 percent) ere representative of test processin times in eneral. With that caveat, in the months of October and November 2020, 9 percent of the tests for hich a calculation could be made resulted in test results that ere returned ithin four days of the test administration.[10]

Concl sion, Re irement Six

Since the issuance of the preliminary in unction, the DOC has administered over 2, 00 CO ID-19 tests to inmates at the CD and CT , over 1 tests per day. The a ency s testin protocols pay particular emphasis to identifyin and containin any inmates ith CO ID-19 before they interact ith the eneral population and have an opportunity to communicate the virus to other inmates or staff. Since the issuance of the preliminary in unction, 10 of the 11 inmates ho tested positive for CO ID-19 ere discovered durin routine inta e testin and the 11th case, caused by a ne ly admitted inmate s placement on the mental health unit, as

[10] or reference, there as sufficient data for 149 of the 1,002 tests administered in those t o months. Thirty-three of the tests ere administered t o days before the data as provided to *a* and the results of those tests ere still pendin .

uic ly contained because of the inta e testin . In the one case in hich an inmate ho tested positive for CO ID-19 had a cellmate, the cellmate as also tested.

The evidence indicates that the DOC does not as a matter of eneral practice test inmates ho are transferred to Saint Eli abeths Hospital. Medical staff indicate they often are not informed that an inmate ill be transferred to Saint Eli abeths in advance. The data also indicate that the DOC does not routinely test inmates ho are transferred to federal correctional facilities. Medical staff e plained that they follo the procedure established by the Marshals Service.

inally, a revie of a sample of sic call re uests that included symptoms consistent ith CO ID-19 revealed that most inmates ere not tested for CO ID-19 in response to the sic call re uest. Unity medical staff e plained that there is clinical ud ement involved in decidin hether to administer a CO ID-19 test to an inmate. did not assess those decisions.

CONCLUSION

are available to ans er any uestions the Court or the Parties have about the matters addressed in this report.

AMENDMENT OF SOLICITATION / MODIFICATION OF CONTRACT	1. Contract Number	Page of Pages	
	CW68868	1	2

2. Amendment/Modification Number	3. Effective Date	4. Requisition/Purchase Request No.	
M0006	May 18, 2020		Comprehensive Medical Services for DOC

6. Issued by: Peter Kern Code	7. Administered by (If other than line 6)
Office of Contracting and Procurement 441 4th Street, NW Suite 330 South Washington, DC 20001	Department of Corrections 2000 14th St. NW 7th Floor Washington, DC 20009

8. Name and Address of Contractor (No. street, city, county, state and zip code)		9A. Amendment of Solicitation No.
Unity Health Care, Inc. 1100 New Jersey Ave SE, Suite 500 Washington DC 20003 Office: 202-715-7900 Attn.: Vincent A. Keane vkeane@unityhealthcare.org		9B. Dated (See Item 11)
	X	10A. Modification of Contract/Order No. CW68868
Code Facility		10B. Dated (See Item 13) 04/05/2019

11. THIS ITEM ONLY APPLIES TO AMENDMENTS OF SOLICITATIONS

☐ The above numbered solicitation is amended as set forth in item 14. The hour and date specified for receipt of Offers ☐ is extended. ☐ is not extended. Offers must acknowledge receipt of this amendment prior to the hour and date specified in the solicitation or as amended, by one of the following methods: (a) By completing Items 8 and 15, and returning _____ copies of the amendment: (b) By acknowledging receipt of this amendment on each copy of the offer submitted; or (c) BY separate letter or fax which includes a reference to the solicitation and amendment number. FAILURE OF YOUR ACKNOWLEDGMENT TO BE RECEIVED AT THE PLACE DESIGNATED FOR THE RECEIPT OF OFFERS PRIOR TO THE HOUR AND DATE SPECIFIED MAY RESULT IN REJECTION OF YOUR OFFER. If by virtue of this amendment you desire to change an offer already submitted, such may be made by letter or fax, provided each letter or telegram makes reference to the solicitation and this amendment, and is received prior to the opening hour and date specified.

12. Accounting and Appropriation Data (If Required)

13. THIS ITEM APPLIES ONLY TO MODIFICATIONS OF CONTRACTS/ORDERS , IT MODIFIES THE CONTRACT/ORDER NO. AS DESCRIBED IN ITEM 14

	A. This change order is issued pursuant to (Specify Authority): 27 DCMR, Chapter 36, Contract Modifications The changes set forth in Item 14 are made in the contract/order no. in item 10A.
	B. The above numbered contract/order is modified to reflect the administrative changes (such as changes in paying office, appropriation data etc.) set forth in item 14, pursuant to the authority of 27 DCMR, Chapter 36, Section 3601.2.
	C. This supplemental agreement is entered into pursuant to authority of:
x	D. Other (Specify type of modification and authority)) 27 DCMR, Chapter 36 Sections 3601(a) negotiated adjustment and f3603.1 change order clause.

E. IMPORTANT: Contractor ☐ is not ☒ is required to sign this document

14. Description of Amendment/Modification (Organized by UCF Section headings, including solicitation/contract subject matter where feasible.)

This modification is in response to the COVID-19 emergency at the DC Department of Corrections Central Detention Facility and the Correctional Treatment Facility. Mod M0006 adds one CLIN funding NTE $428,672.00 for two Medical Assistant Positions and two Nurse Practioners (NP) or Physician Assistants (PA) from 05/18/2020 through 09/30/2020 and two Option Contract Line Items (CLINs) (see page 1 of this Mod), which are subject to the availability of funds. The modification is authorized and executed through WebEOC-8076716.

For this Modification only, Unity Health Care, Inc. shall submit invoices directly to Dr. Beth Jordan at beth.jordan@dc.gov and to Deborah J. White at deborahj.white@dc.gov. These invoices shall not be applied to the existing purchase order but to the purchase order specifically designated for WebEOC-8076716. All other billing shall continue as specified in the contract.

All other terms and conditions remain unchanged.

Except as provided herein, all terms and conditions of the document is referenced in Item 9A or 10A remain unchanged and in full force and effect.

15A. Name and Title of Signer (Type or print)		16A. Name of Contracting Officer	
Vincent A. Keane		Deborah J. White	
15B. Vincent A Keane (Signature of person authorized to sign)	15C. Date Signed June 2, 2020	16B. District of Columbia Deborah J White (Signature of Contracting Officer)	16C. Date Signed 08/11/2020

AMENDMENT OF SOLICITATION / MODIFICATION OF CONTRACT	1. Contract Number	Page of Pages	
	CW68868	2	2

Mod M0006 adds the following Option CLIN pricing to Section B.3.2.1 Requirements, in B.3.2 Option Year One, in response to COVID-19 and WebEOC-8076716 approval:

Contract Line Item No. (CLIN)	Labor Category	Hourly Labor Rate*	Estimated Labor Hours	Total Amount
CLIN 1010 For the Time Period 05/18/2020 to 09/302020				
CLIN 1010A C.3.36	2 Medical Assistants (MA) at 1,088 labor hours each.	$ 65.00	2,176	$ 141,440.00
CLIN 1010B C.3.36	2 Nurse Practitioners (NPs) or 2 Physician Assistants (PAs) at 1,088 labor hours each.	$ 132.00	2,176	$ 287,232.00
Total CLIN 1010 Not-to-Exceed				**$ 428,672.00**
CLIN 1011 For the Time Period 10/01/2020 to 01/31/2021				
Option CLIN 1011A C.3.36	2 Medical Assistants (MA) at 984 labor hours each.	$ 65.00	1,968	$ 127,920.00
Option CLIN 1011B C.3.36	2 Nurse Practitioners (NPs) or 2 Physician Assistants (PAs) at 984 labor hours each.	$ 132.00	1,968	$ 259,776.00
Total CLIN 1011 Not-to-Exceed				**$ 387,696.00**
CLIN 1012 For the Time Period 02/01/2021 to 04/14/2021				
Option CLIN 1012A C.3.36	2 Medical Assistants (MA) at 584 labor hours each.	$ 65.00	1,168	$ 75,920.00
Option CLIN 10121B C.3.36	2 Nurse Practitioners (NPs) or 2 Physician Assistants (PAs) at 584 labor hours each.	$ 132.00	1,168	$ 154,176.00
Total CLIN 1011 Not-to-Exceed				**$ 230,096.00**
Grand Total Not-to-Exceed Amount				**$ 1,046,464.00**

*The fixed hourly rates shall be fully loaded and include wages, benefits, overhead, general and admnistrative expenses and profit.

Ex A

What is a novel coronavirus? A novel coronavirus is a new coronavirus that has not been previously identified. The virus causing coronavirus disease 2019 (COVID-19), is not the same as the coronaviruses that commonly circulate among humans and cause mild illness, like the common cold.

Why is the disease called coronavirus disease 2019, COVID-19? On February 11, 2020 the World Health Organization (WHO) announced an official name for the disease that is causing the 2019 novel coronavirus outbreak, first identified in Wuhan China. The new name of this disease is coronavirus disease 2019, abbreviated as COVID-19. In COVID-19, 'CO' stands for 'corona,' 'VI' for 'virus,' and 'D' for disease. Formerly, this disease was referred to as "2019 novel coronavirus" or "2019-nCoV".

There are many types of human coronaviruses including some that commonly cause mild upper-respiratory tract illnesses. COVID-19 is a new disease, caused by a novel (or new) coronavirus that has not previously been seen in humans. The name of this disease was selected following WHO best practice for naming of new human infectious diseases.

What's the source of the virus? COVID-19 is caused by a coronavirus called SARS-CoV-2. Coronaviruses are a large family of viruses that are common in people and may different species of animals, including camels, cattle, cats, and bats. Rarely, animal coronaviruses can infect people and then spread between people. This occurred with MERS-CoV and SARS-CoV, and now with the virus that causes COVID-19. The SARS-CoV-2 virus is a betacoronavirus, like MERS CoV and SARS CoV All three of these viruses have their origins in bats The sequences from U.S. patients are similar to the one that China initially posted, suggesting a likely single, recent emergence of this virus from an animal reservoir However, the exact source of this virus is unknown

How does the virus spread? The virus that causes COVID 19 is thought to spread mainly from person to person, mainly through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs Spread is more likely when people are in close contact with one another (within about 6 feet).

COVID 19 seems to be spreading easily and sustainably in the community ("community spread") in many affected geographic areas. Community spread means people have been infected with the virus in an area, including some who are not sure how or where they became infected

Why are we seeing a rise in cases? The number of cases of COVID-19 being reported in the United States is rising due to increased laboratory testing and reporting across the country. The growing number of cases in part reflects the rapid spread of COVID-19 as many U.S. states and territories experience community spread. More detailed and accurate data will allow us to better understand and track the size and scope of the outbreak and strengthen prevention and response efforts.

Can someone who has had COVID-19 spread illness to others? The virus that causes COVID-19 is spreading from person-to-person. People are thought to be most contagious when they are symptomatic (the sickest). That is why CDC recommends that these patients be isolated either in the hospital or at home (depending on how sick they are) until they are better and no longer pose a risk of infecting others. More recently the virus has also been detected in asymptomatic persons.

How long someone is actively sick can vary so the decision on when to release someone from isolation is made using a test-based or non-test-based strategy (i.e. time since illness started and time since recovery) in consultation with state and local public health officials. The decision involves considering the specifics of each situation, including disease severity, illness signs and symptoms, and the results of laboratory testing for that patient. Someone who has been released from isolation is not considered to pose a risk of infection to others.

Can someone who has been quarantined for COVID-19 spread the illness to others? Quarantine means separating a person or group of people who have been exposed to a contagious disease but have not developed illness (symptoms) from others who have not been exposed, in order to prevent the possible spread of that disease. Quarantine is usually established for the incubation period of the communicable disease, which is the

span of time during which people have developed illness after exposure. For COVID-19, the period of quarantine is 14 days from the last date of exposure because the incubation period for this virus is 2 to 14 days. Someone who has been released from COVID-19 quarantine is not considered a risk for spreading the virus to others because they have not developed illness during the incubation period.

Can I get sick with COVID-19 if it's on food? Based on information about this novel coronavirus thus far, it seems unlikely that COVID-19 can be transmitted through food – additional investigation is needed.

Will warm weather stop the outbreak of COVID-19? It is not yet known whether weather and temperature affect the spread of COVID-19. Some other viruses, like those that cause the common cold and flu, spread more during cold weather months but that does not mean it is impossible to become sick with these viruses during other months. There is much more to learn about the transmissibility, severity, and other features associated with COVID-19 and investigations are ongoing.

What are the symptoms and complications that COVID-19 can cause? Current symptoms reported for patients with COVID-19 have included mild to severe respiratory illness with fever[1], cough, and difficulty breathing.

If I recovered from COVID-19, will I be immune to it? CDC and partners are investigating to determine if you can get sick with COVID-19 more than once. At this time, we are not sure if you can become re-infected. Until we know more, continue to take steps to protect yourself and others.

Who is at higher risk for serious illness from COVID-19? COVID-19 is a new disease and there is limited information regarding risk factors for severe disease. Based on currently available information and clinical expertise, **older adults** and **people of any age who have serious underlying medical conditions** might be at higher risk for severe illness from COVID-19. Based on what we know now, those at high-risk for severe illness from COVID-19 are:

- People aged 65 years and older
- People who live in a nursing home or long-term care facility

People of all ages with underlying medical conditions, particularly if not well controlled, including:

- People with chronic lung disease or moderate to severe asthma
- People who have serious heart conditions
- People who are immunocompromised
- People with severe obesity (body mass index [BMI] ≥40)
- People with diabetes
- People with chronic kidney disease undergoing dialysis
- People with liver disease

What kind of tesng is being used t o diagnose if I have COVID-19? There are actually many tests being used to diagnose COVID-19 that the U.S. Food & Drug Administration (FDA) has authorized for use during the current emergency. All of these diagnostic tests identify the virus in samples from the respiratory system, such as from nasal or nasopharyngeal swabs.

CDC Guidelines on How to Protect Yourself and Others

Know how it spreads

There is currently no vaccine to prevent coronavirus disease 2019 (COVID-19).

The best way to prevent illness is to avoid being exposed to this virus.

The virus is thought to spread mainly from person-to-person:

- Between people who are in close contact with one another (within about 6 feet).
- Through respiratory droplets produced when an infected person coughs, sneezes or talks.
- These droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
- Some recent studies have suggested that COVID-19 may be spread by people who are not showing symptoms.

Clean your hands often

- Wash your hands often with soap and water for at least 20 seconds especially after you have been in a public place, or after blowing your nose, coughing, or sneezing.
- If soap and water are not readily available, **use a hand sanitizer that contains at least 60% alcohol.** Cover all surfaces of your hands and rub them together until they feel dry.
- **Avoid touching your eyes, nose, and mouth** with unwashed hands.

Avoid close contact

- Avoid close contact with people who are sick.
- Put **distance between yourself and other people, at least 6 feet when possible**(social distancing)
- Remember that some people without symptoms may be able to spread virus.

Cover your mouth and nose with a cloth face cover when around others

- You could spread COVID-19 to others even if you do not feel sick.
- Everyone should wear a cloth face cover when they have to go out in public (cloth face coverings should not be placed on anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance).
- The cloth face cover is meant to protect other people in case you are infected.
- Do NOT use a facemask meant for a healthcare worker.
- Continue to keep about 6 feet between yourself and others. The cloth face cover is not a substitute for **social distancing.**

Cover coughs and sneezes

- If you are in a private setting and do not have on your cloth face covering, remember to always cover your mouth and nose with a tissue when you cough or sneeze or use the inside of your elbow.
- Throw used tissues in the trash.
- Immediately **wash your hands** with soap and water for at least 20 seconds. If soap and water are not readily available, clean your hands with a hand sanitizer that contains at least 60% alcohol.

Clean and disinfect

- Clean AND disinfect frequently touched surfaces daily. This includes tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets, and sinks.
- **If surfaces are dirty, clean them.** Use detergent or soap and water prior to disinfection.

Definitions:

Medical Isolation—Medical isolation refers to confining a confirmed or suspected COVID-19 case (ideally to a single cell with solid walls and a solid door that closes), to prevent contact with others and to reduce the risk of transmission. Medical isolation ends when the individual meets pre-established clinical and/or testing criteria for release from isolation, in consultation with clinical providers and public health officials. In this context, isolation does NOT refer to punitive isolation for behavioral infractions within the custodial setting.

Quarantine—Quarantine refers to the practice of confining individuals who have had close contact with
a COVID-19 case to determine whether they develop symptoms of the disease. Quarantine for COVID-19 should last for a period of 14 days. Ideally, each quarantined individual would be quarantined in a single cell with solid walls and a solid door that closes. If symptoms develop during the 14-day period, the individual should be placed undermedical isolation and evaluated for COVID-19. If symptoms do not develop, movement restrictions can be lifted, and the individual can return to their previous residency status within the facility

Social Distancing—Social distancing is the practice of increasing the space between individuals and decreasing the frequency of contact to reduce the risk of spreading a disease (ideally to maintain at least 6 feet between all individuals, even those who are asymptomatic). Social distancing strategies can be applied on an individual level (e g , avoiding physical contact), a group level (e.g., canceling group activities where individuals will be in close contact), and an operational level (e g , rearranging chairs in the dining hall to increase distance between them) Although social distancing is challenging to practice in correctional and detention environments, it is a cornerstone of reducing transmission of respiratory diseases such as COVID 19

Verbal Screening &Temperature Check Protocols for Incarcerated/Detained Persons, Staff, & Visitors

CDC guidance recommends verbal screening and temperature checks for incarcerated/detained persons, staff, volunteers, and visitors who enter correctional and detention facilities, as well as incarcerated/detained persons who are transferred to another facility or released from custody. Below, verbal screening questions for COVID-19 symptoms and contact with known cases, and a safe temperature check procedure are detailed.

√ **Verbal screening for symptoms of COVID-19 and contact with COVID-19 cases should include the following questions:**

1. *Today or in the past 24 hours, have you had any of the following symptoms? Fever, felt feverish, or had chills? Cough? Difficulty breathing?*
2. *In the past 14 days, have you had contact with a person known to be infected with the novel coronavirus (COVID-19)?*

√ **The following is a protocol for medical providers to safely check an individual's temperature:**

- Perform hand hygiene
- Put on a face mask, eye protection (goggles or disposable face shield that fully covers the front and sides of the face), gown/coveralls, and a single pair of disposable gloves
- Check individual's temperature
- If performing a temperature check on multiple individuals, ensure that a clean pair of gloves is used for each individual and that the thermometer has been thoroughly cleaned in between each check. If disposable or non-contact thermometers are used and the screener did not have physical contact with an individual, gloves do not need to be changed before the next check. If non-contact thermometers are used, they should be cleaned routinely as recommended by CDC for infection control.
- Remove and discard PPE and perform hand hygiene

Ex B

Tapping into our inner Strength…

A survivor's guide to getting through the Covid-19 Crisis

Introduction

Covid-19 is a virus that has spread around the world. It has impacted every area of our daily lives. Businesses have shut their doors, people have been asked to "shelter in place," many people have become unemployed, and the government has been issuing subsidy checks to citizens just to help people get through their financial crises.

Everyone is under stress. As so often happens, people are rallying, trying to help one another and giving lifestyle "tips" or writing self-help manuals about staying healthy. These include advice for being healthy during Covid-19, as well as staying emotionally and spiritually well when there is such disruption in our lives.

Unfortunately, these resources don't tend to address the needs of those of us in community living situations, such as jails or prisons, mental health facilities, long term rest-homes, shelters, etc. These settings present a variety of challenges, such as lack of personal space and privacy, rules limiting personal freedom, and lack of easy access to basic needs, such as running water or the ability to distance yourself from others.

> *"I have a cell mate, so it is hard to get time alone in my room. Sometimes, when I'm feeling stressed, I go take a shower just so I can be alone for a few minutes and take time to do some breathing exercises that help me feel better."*

If you are currently in this situation, this manual is for you and it's written by people that have lived in these kinds of environments!!! This information is also meant to provide information to people who may not have access to the daily news about the new coronavirus. Included is a section on the different ways we may be experiencing stress related to all the life changes caused by the virus. Strategies to stay well- physically, emotionally, intellectually and spiritually – in

challenging environments are also included. Lastly, there's a section to inspire you to use your wisdom and survival skills to share with others that are living in the same situation right now. This is called "peer support" and it is powerful! Peer support, or helping one another, can be lifesaving at times like these... It helps people we connect with and ourselves as well. With this guide, we honor your inner survivor and value your willingness to be of service to others.

Responding to Covid-19

These are difficult times for everyone. COVID-19 has impacted all of us in many ways. This can be especially difficult for those of us who don't have a strong network of support or who are isolated in jails, prisons, mental health facilities, shelters or living on the streets. Because of Covid-19 people, activities and resources that usually support our health may have been removed or changed in significant ways. Fortunately, you are a survivor and this guide is designed to remind you of all the ways you have survived and thrived through other difficult life situations. With this in mind, this guide asks you to share your skills with others around you by using what you learn to help them through this tough time. Together, you are NOT alone… you are simply people together, going through a difficult time and relying on each other's strength, kindness and skills to continue your journey of wellness! Let's start by sharing some basic information about COVID-19 and the way it may be impacting our bodies…

What is Covid-19?

COVID-19 (also called "*Coronavirus 2019*") is a virus that is transmitted from person to person:

- when people who are in close contact with one another within about 6 feet or less.
- through respiratory droplets that pop out when an infected person coughs, sneezes or is simply speaking.
- when these droplets land in the mouths, eyes or noses of people who are nearby or when they're inhaled into the lungs.

It's NEW!!

The Covid-19 virus is called a "novel" or "new" coronavirus. ***This means that humans don't have any immunity (natural disease protection) and there are no treatments or vaccines for it.*** Scientists have been able to create a test that can determine if someone has the virus but the tests aren't widely available yet. That's one of the reasons why this virus is so different and so dangerous. It can spread from person to person easily. Some people get really sick or die because there isn't any treatment available.

Of course, medical hospitals can treat the symptoms that develop, like pneumonia and other life-threatening lung diseases. But if too many people get really sick at the same time, we don't have enough hospital beds and equipment needed for that kind of resource demand. Right now, the effort is to **SLOW** the spread so hospitals can manage the people that are already sick with the virus.

Why the Big Deal?

The "social isolation" (staying in your living quarters) has been important because the virus has some sneaky ways that lead to it spreading easily:

⇒ People can carry the virus and spread it to others without having any symptoms themselves. Any of us could be a silent carrier, infecting others without even knowing it. This is called being "asymptomatic".

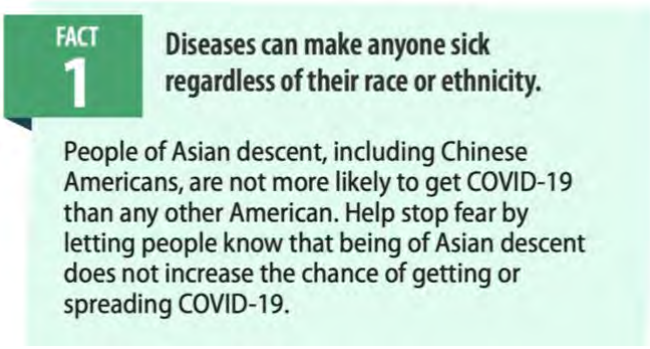
⇒ Also, people who get sick may have been carrying and spreading the virus for up to two weeks before showing symptoms.

This is why there are such dramatic efforts to keep people apart and "social distance."

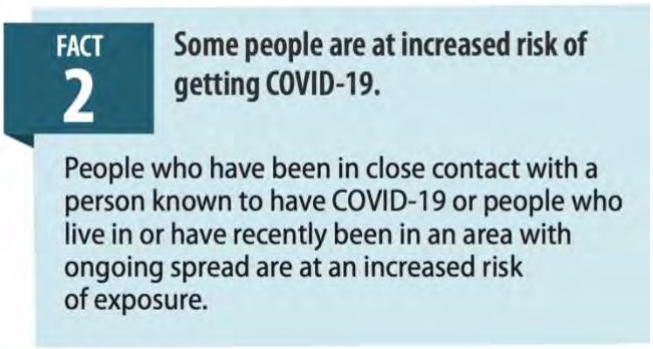
Some Quick Facts and Myth Busters

Here are some quick facts and myth busters from the Center for Disease Control (CDC).

Because the virus first emerged in China, rumors started that this was an Asian or Chinese disease. Like all viruses, Covid-19 doesn't discriminate. The coronavirus is called a "pandemic" because it's now a world-wide illness that has infected about 3 ½ million people as of this writing. This number continues to increase every day.

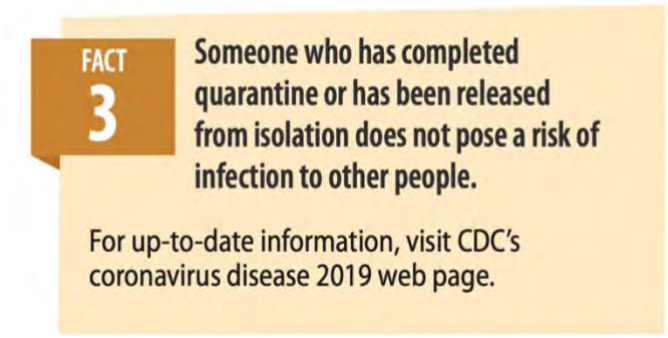


Exposure to people with Covid-19 increases your risk of getting sick with the virus. But for some people, the impact of the virus is more likely to be deadly. People at greater risk are:



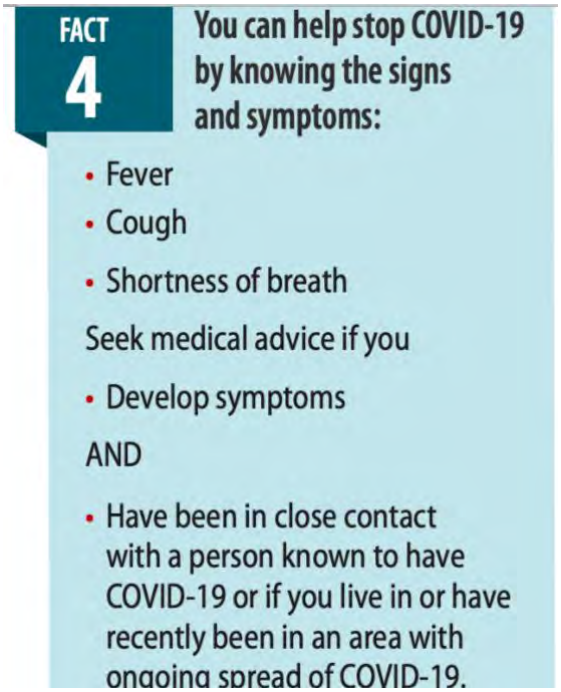
- ⇒ People over 65 years old
- ⇒ Strong bodies can probably fight off the virus so people will get sick but recover. However, people with weak bodies or immune systems can get deathly ill. People who have pre-existing illnesses, especially lung conditions, heart conditions, diabetes, etc. are especially vulnerable.

Since we can have the virus before we actually get any symptoms, it's suggested that people "quarantine" or isolate themselves for two weeks after they know they've been exposed to someone with the virus. This is to slow down the spread. As of right now, with what the experts have learned about the disease so far, it's believed that if a person who was exposed hasn't gotten any

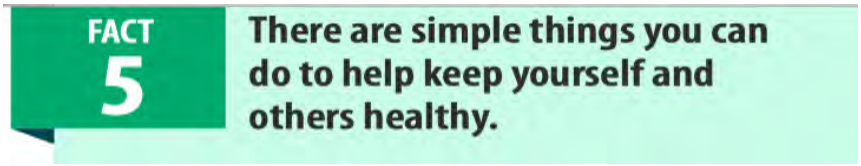


symptoms within two weeks, he or she wasn't infected and is safe to go back out into the community.

The symptoms of Covid-19 are very similar to other common illnesses, like the yearly FLU. If you have any of these symptoms, tell the correctional staff or another service provider where you are housed. Testing is usually available to those with symptoms and you can find out if you do or don't have the virus. If you're in a living situation where you don't have quick access to medical support but think you might have the virus, it's probably best to assume you do and take precautions to minimize spreading the illness to others. These are discussed below.



There is currently no vaccine to prevent the 2019 coronavirus disease (COVID-19). ***The best way to prevent illness is to avoid being exposed to this virus if it's possible.*** Of course, for most people total isolation from others isn't possible. For people currently in jails, mental health institutions or other residential facilities, isolation can be more challenging. However, there are some precautions and recommended strategies that can help you minimize your chances of getting the virus.



RECOMMENDED STRATEGIES

Washing your hands with soap for at least 20 seconds is recommended because soap is a great virus killer! The virus often gets into our bodies by traveling from our hands to our nose, mouth or eyes when we touch our face. It can also get inside our bodies when we breathe. So, the more you wash your hands, the more likely you are to kill any of the virus

germs you are exposed to during the day. If soap isn't available, using a **hand sanitizer** with at least 60% alcohol can also help. Be sure to cover all surfaces of your hands and rub them together until the hand sanitizer fully covers both hands and they feel dry.

Avoiding close contact with others when possible is important, especially with people who are sick. A good way to help is putting **distance between yourself and other people (at least 6 ft),** which can lessen your chance of getting the virus. This is particularly important for people who are at higher risk of getting very sick (see below).

Wearing a face mask is important to help minimize the chance that *you* will infect other people. The Covid-19 virus is so dangerous because you can have it and spread it to others without having any symptoms at all. Facemasks provide a barrier for the nose and mouth to either transmit droplets or receive them… It's protection for everyone!

THINGS YOU CAN DO ANYWHERE

Some people don't have the ability to follow the CDC recommendations because of the imitations of homelessness, or living in medical or penal institutions. Here are some other ways to keep yourself and others safe.

Can't Wash Your Hands Often? Try these things you can do anywhere:

Hand washing decreases the risk of carrying the virus from surfaces you touched to your eyes, nose and mouth. We tend to touch our faces, a lot – way more than we may realize – and this is one of the quickest routes for the virus to carry from person to person. If you can't wash your hands often, you can still:

- **Try to limit how many surfaces you touch**. Things like door handles, counters and other smooth surfaces can hold the virus for several days.
- **Use your sleeve over your hands.** When you go through doors or gates or when you pick up something from a counter, use an article of clothing like your sleeve to cover your hand.

- **Try to keep your hands away from your face.** This sounds simple, but it's really hard. Try to pay attention for just 15 minutes and you'll see how many times your hand goes to your face. If you can't wash your hands, keeping your hands from your face will greatly increase your safety.
- **Cover your mouth and nose with your shirt.** When you're in shared spaces where you can't keep at least 6 feet between you and others, you might want to pull up your shirt or clothing up over your face to cover your mouth and nose like a mask.
- **Cough or sneeze into your inner arm or clothing.** When you cough or sneeze, use the inner space of your elbow or a piece of clothing rather than covering your mouth with your hands. If you use tissue, throw it away as soon you're done. Don't save it.
- **Turn your head and cover your mouth.** If someone else is coughing or sneezing in your presence, try to turn your head away from the person. Stay turned away for about 30 seconds if you can. You can also use a piece of clothing to cover your mouth.

Live in Close Contact With Others? Try these things when you can't socially distance: You may not have the option of keeping a good distance between you and others in your living situation. If this is your situation, try this option:

- **If you share a room or cell,** you might want to determine an imaginary line in the room where each of you has your own space. You can even put something on the floor to remind both of you about the line, such as a piece of clothing, a sock, a sheet, etc.

THINGS YOU CAN EXPECT FROM STAFF:

- If you're in a residential living situation and everyone is on lock-down, then you're only exposed to each other. If you've been on lock-down for two weeks and no one has gotten sick, you're probably pretty safe.
- **If staff are coming in and out, it's important that they should be using safety practices like wearing masks and washing their hands so they don't bring the virus into your living setting. This will help to make sure you're safe!**
- If you're in a jail or prison, you should know that they've temporarily stopped all transfers of people from other jails and prisons, trying to decrease any spread.

If you're concerned that the staff around you are not following safety protocols to keep you healthy, you have the right to reach out to the unit supervisor. To 'advocate' means that you speak up for your rights. Filling out a grievance form or talking to a floor supervisor is a way to make sure your concerns about your health are heard.

If you feel empowered in your setting, you might also suggest some safety practices that are being currently used in other institutions. You can also use your voice to highlight some examples of great practices other places are doing to effectively handle this crisis in outside hospitals, jails, etc.

Testing is slowly becoming more available to people beyond those who are already showing symptoms. There are groups of scientists who are working every day to try to create medications to lessen the symptoms of COVID-19, others are working to create a vaccine. Like you, everyone is trying their best to slow the spread by practicing what's in this manual. These practices are important because our actions help keep the virus from infecting those who are most vulnerable. These are people who are older and have already have serious medical conditions, such as COPD, diabetes, heart conditions, HIV, immunity illnesses, etc.

How Might Covid-19 Affect Us?

STRESS is a natural response to uncertainty and disruption, and so in this time when our entire way of life has been disrupted, everyone everywhere is feeling some level of stress.

We each experience stress in our own unique ways. As we grow up, we learn how to respond to challenges by watching those around us for cues of what is and isn't acceptable. In addition, our bodies have natural defense system that sends a signal when things are out of sync with our body and mind so we can react to keep ourselves safe. Think about what happens when you startle a dog or cat. Their first reaction is to get into a defensive posture and hiss or bark. In an instant, they're ready to protect themselves. Humans are much the same way. We also get flooded with chemicals, like adrenaline, that assist our minds and bodies to prepare to combat danger.

Our Internal Alarm: Those of us who have grown up in homes with violence, abuse or neglect may have had our "danger" alert activated many times. After too many alerts over time, parts of our system can get worn out and broken. For some of us, the "alarm bell" goes off often, even when there's not any danger. For example, our alarm bell may signal a five-alarm fire, when the situation is really only a small amount of smoke. In these cases, our bodies are flooded with overwhelming amounts of "fight or flight" chemicals. We're getting ready for a battle that doesn't exist. For others, the alarm bell might fail to ring when needed, leaving us vulnerable and unprepared to address a danger that may exist.

Our Response to Danger: While some of us respond to our internal alarm by going into a "fight" stance, others of us may respond in the opposite way by "freezing" or "checking out." This is known as dissociating and is an automatic biological response. In the same way a deer freezes in the middle of the road in fear when a car approaches, we sometimes go into a freeze mode. This can lead to brain fog, an inability to speak or speak clearly, feeling stuck in place and unable to move, or spacing out. The spacing out or dissociating can be mild or more extreme. It can include a complete memory loss of the time that passes like a blackout. Here's another way to look at it, graphically:

FLIPPING OUR LID

Make a fist with your thumb tucked inside your fingers. This is a hand model of our brain.

THUMB

In this hand model, our fingers represent where our emotions and memories live. The thumb is called the Limbic System and it is where our Fight, Flight, Freeze reactions to danger are triggered.

FINGERS

In this hand model, our fingers represent our Rational Brain. When our rational brain is activated, we are able to think, reason and make decisions about how we are going to respond to danger. As in the image above, it covers our Limbic System (thumb) and we use it to think through situations.

However, at times when our Limbic System (thumb) is really activated, it can cause us to "flip our lid," and our rational brain (fingers) can be taken over by our emotions. When the Rational Brain loses control of emotions, we can't think clearly.

To "un-flip" our lids, we can use the strategies included in this manual to help us feel grounded, calm our bodies and mind, and feel more empowered to make good decisions.

Distress: What YOU Might Be Experiencing

Experts agree that a core component of stress is the perception of threat and danger. Ironically, our "stress" system is meant to protect us when we're in danger but it can sometimes work against us. When we're stressed, we tend to experience distress in our most vulnerable personal areas. This may be physical, emotional, intellectual and/or spiritual vulnerability.

Outward Signs of Distress:

Often, when we experience distress it shows up in our behavior. It's important to understand and know when our own behavior is a signal that we may be experiencing physical, emotional, intellectual or spiritual distress. Some "behavioral cues" include:

- Repeating old habits or patterns: Do you find that you are tempted to start smoking cigarettes, even though you quit years ago? Picking up old habits as a way to cope is very common and could be a signal to you that you are distressed.
- Lashing out, yelling or throwing things: When our internal distress levels reach a boiling point, we may be tempted to release stress tension out of frustration. This may be a warning sign that it's time to relieve our stress in healthier ways.
- Pacing, leg shaking, or wringing our hands: Sometimes when our nervous system needs to release tension, it does so through our body. Be aware of these stress signals.

As you read these examples, think about circumstances you've been thinking about or feeling over the past few days or weeks.

Physical Distress

Imagine you're walking down the street. When you turn the corner, you see a lion staring at you. Right away, your body starts pumping out chemicals that will allow you to do what's needed to survive if the lion attacks. That's really helpful when there's a lion but not so good when we're worried about things going on around us, like COVID-19. Our brains all have the same stress reaction to any kind of "danger" and all those neurochemicals can cause all sorts of physical discomforts. This includes:

- sweaty palms
- heart fluttering (palpitations)
- shortness of breath
- dizziness or headaches
- tingling in fingers or toes
- aches and pains (old injuries will often ache again !!)
- muscle tension
- restlessness
- digestive issues like diarrhea or constipation
- nausea

CAUTION!
Sometimes we may think that our physical discomforts are caused by stress, but they can actually be physical symptoms of COVID-19. Before you assume it's stress, have it checked out! If you have ANY of the following symptoms, please tell the staff where you currently reside!

- cough
- difficulty breathing
- fever
- chills
- muscle pain
- sore throat
- persistent pain or pressure in the chest
- Being flushed (lacking of color) in the lips or face

Think about your body, describe the physical sensations have you been experiencing over the past few weeks.

One strategy: Breathing

Why this may help:

Normally, we breathe very shallowly, up in our chests. Learning to breathe down into our stomachs first helps us naturally calm down. It also brings more oxygen into our body and brain, which helps us think more clearly. Belly breathing before a stressful situation can be very helpful. Here is what you do:

⇒ First, breathe as you normally do
⇒ What parts of your body move as you breathe? Notice what it feels like
⇒ Now, sit and place your hand on your stomach
⇒ With your mouth closed, breathe in for four seconds or until you feel your whole chest fill with air all the way down to your belly
⇒ Hold in the air for four seconds
⇒ Slowly blow all the air out of your lungs until it's all gone
⇒ Try this three or four times!

Did you notice anything different about how you feel?

Intellectual Distress

When our inner sensors tell us that something isn't right and we may be in danger, our brains work differently. We can think of our brains as being three brains in one. Part of our brain is automatically dedicated to our survival. It runs our heart, our breathing, etc. A second part of our brain is called our "emotional brain." This part of the brain rules our emotions and holds our memories. Sometimes our emotions will have words connected to them and sometimes they're just feelings with no words. Our third brain is where we do the complex thinking needed for decision making, using judgment, navigating social relationships, etc. It's this third brain that we rely on most to guide us through the complex nature of living with others in the world. However, in times of stress, our third brain steps aside a bit to allow the survival brain to be more in charge. This can lead to thinking problems, including:

- difficulty concentrating
- difficulty with decision making

- retaining information
- hard time processing information
- less patience with others
- more difficulty managing relationships that are complicated

Think about your OWN THINKING **lately. What kinds of thoughts have felt challenging?**

One strategy: Sphere of Influence

Why this may help:

We all would like to think that we have good control over a lot of things. We Don't!! We have even LESS control when we're in places where others make the majority of the rules, such as jails, prisons, mental health facilities, residential settings, etc.

For those of us with trauma histories, it can feel really scary to lose our inner sense of control. A lot of times though, our distress isn't about the realities around us. It's more about our own inner confusion, and where we do and don't have control. Trying to be in control of those things over which we have no power can lead to inner turmoil. One way to help ourselves in this situation is to figure out what we DO and DON'T have control over. The exercise below may help to decrease some of our inner racing thoughts or obsessive concerns. Instructions are on the page after the Sphere of Control model...

Taking back my Control

Instructions:

1. Take a moment to consider all the things that are contributing to you feeling overwhelmed, e.g. limited time to yourself, ongoing worry about someone you care about, feeling tired, you don't feel well, etc. If it helps, quickly scribble your thoughts on a piece of paper.

2. Add each 'Overwhelm Item' to your Spheres of Influence in the following way:

- If you have COMPLETE CONTROL over the item (i.e., you can resolve it on your own without needing anyone else's help or input), write it down in the first circle labeled "WITHIN MY CONTROL"

- If you have PARTIAL CONTROL or can INFLUENCE the item (i.e., you can resolve part of the item or influence the outcome through your actions or behavior), write this item in the second circle labeled "I CAN INFLUENCE."

- If the item is COMPLETELY OUTSIDE of your control or influence (i.e., there is nothing you could do or say that could directly impact this item), write this item OUTSIDE in the area labeled "EVERYTHING ELSE..."

- If you think of other things that are overwhelming you as you do this exercise, add those into your Sphere of Influence as above.

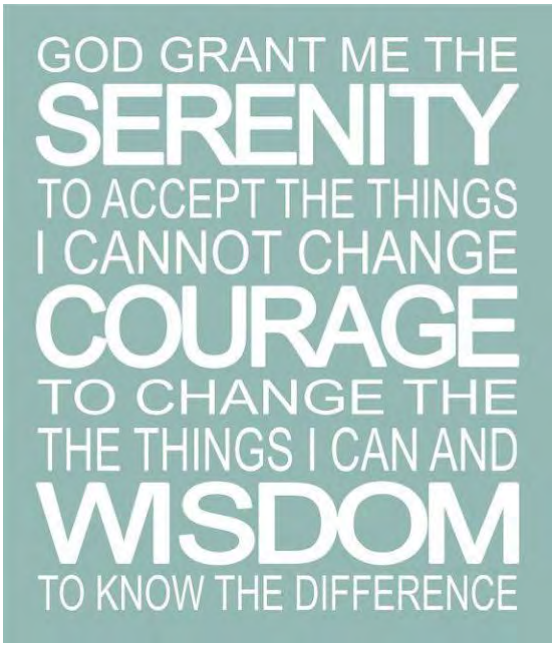
From your "Spheres of Influence" that you created:

⇒ FOR the items you have CONTROL over, TAKE ACTION (however small) on at least ONE as soon as possible – it will help you feel better.

⇒ FOR the items you have PARTIAL CONTROL or INFLUENCE over, write down the steps you can take and when you might be able to do that.

⇒ Finally (and most importantly) **LET GO of EVERYTHING ELSE!** Strikethrough each of these items on your "Spheres of Influence." If you can't control or influence it, then it's a waste of your precious energy to even think about it.

Here's a familiar quote that may help. (Feel free to replace the word "God" with what is appropriate to your beliefs!!):



Emotional Distress

For the general public, the mental health effects of COVID-19 are as important to address as the physical health effects. For the one in five who already have mental health challenges, the emotional impact of being physically ill can be even greater. Those of us that are separated from friends and family due to being in jails, prisons, hospitals, shelters or other facilities, may be feeling additional levels of emotional disconnection and distress during these times. As a result, you may be feeling:

- Constant worry or anxiety
- Overwhelmed/Stressed
- Difficulty relaxing
- Confusion
- Sense of being overwhelmed
- Feeling powerless
- Mood swings
- Feelings of hopelessness
- Irritability or short temper
- Fear and worry about your own health and the health of your loved ones
- Changes in sleep or eating patterns
- Difficulty sleeping or concentrating
- Worsening of chronic health problems
- Worsening of mental health conditions
- Increased use of alcohol, tobacco or other drugs

Think about your OWN **Emotions. What kinds of emotions have you been feeling? Have you noticed other things that let you know that you're feeling emotional stress?**

One strategy: Journaling

Why this may help:

Thinking while you write often has this magical quality of clarifying your thoughts. Research has shown that spending time to write out our thoughts or feelings - the essence of journaling - can help with clearing out our thoughts, which leads to better decision making. Personal writing can also help with coping, especially during stressful events like dealing with COVID-19. Writing can also help relieve anxiety and boost immune cell activity.

Writing can help you control your thoughts. Getting thoughts from the inside of your mind to paper can help you tap into what lies beneath - what is important to you, what is really fueling the distress and potential ways you may want to move forward.

Journaling Exercise - The 5 Minute Journal

People have been journaling for centuries! What's in a journal can vary dramatically from person-to-person. What you may find useful in a journal is personal and unique to you. The

hard part of learning if or how journaling may feel helpful is simply getting started if you haven't journaled before.

Perhaps the best way to try it out is to start small and just focus on your thoughts.

Directions:

- Put aside 5 minutes each morning and evening to journal your thoughts.
- Start your journaling each morning and evening answering these two simple questions:
    - What am I feeling right now?
    - Do I know why?
- Write down any thoughts/feelings that come to your mind. (Just write them down without thinking about them or judging them - Write them down as they come to you.)
- Keep writing for 5 minutes. If you want to stop, stop. If you want to keep writing and add other themes to your writing, feel free to do that.

Your journaling is not replaying your history. It's reflecting you. It's you working through your problems. It's you figuring things out and clearing your head. Write about the frustrating people you encountered today. Write about comments that bother you or a news headline that made you angry. You can write about the emotional wounds you still think about from your childhood or the person who didn't treat you right as an adult. Write about terrible experiences that happened to you. You can journal about a parent who was just a little too busy, a little too critical or a little too tied up dealing with their own issues instead of being what we needed. The sources of anxiety or worry, the frustrations that routinely pop up at the worst times, the reasons you have trouble staying in relationships, whatever problem you are dealing with—take them to your journal! You'll be shocked by how good you feel after writing out some of the thoughts locked in your mind.

Leave Your Destructive Thoughts In Your Journal

Spiritual Distress

Our spiritual wellbeing is important to our physical and emotional wellbeing. When we're feeling stressed, there's a good chance that our spirit may be as negatively impacted as our body

and mind. This is true whether you meet your spiritual needs through religious participation or any other ways, such as being outside, meditating, etc. In these times, it's common to experience spiritual exhaustion with the following feeling or thoughts:

- A weariness of the heart
- A sinking feeling that nothing really matters
- Questioning beliefs that were once unquestionable, like "Does God even exist?"
- Wondering about the meaning or purpose of your life
- Wondering about your own value in the world
- A sense of deep grieving

Spirituality is often a sense of connection to a bigger picture. It's often individually defined and gives meaning and purpose to a person's life.

Think about your OWN **spiritual center. What questions are you asking yourself that indicate that your spirit is feeling overwhelmed?**

One strategy: Filling Your Heart

Why this may help:

"Heart weariness" can leave us feeling empty, drained, or exhausted. When we feel it can seem like it's hard to defend yourself. Feeling defenseless can make our negative self-thoughts seem truer than they really are. Sometimes, the only way to quiet those voices that bring us to darkness and despair is to intentionally sit down and think about those things which are meaningful to us, and have a "heart-warming" effect on how we feel.

Instructions: On the next page, there's a heart, waiting to be filled. Take some time, maybe close your eyes and start to think about those things that bring you joy in life. Here are some general ideas:

- People you hope to see or talk to when lock-downs and other restrictions are lifted
- People you love and feel committed to, even if your efforts have to be delayed due to incarceration or temporary emotional struggles in your relationships, etc.
- Things you've done that your proud of
- Your hopes and dreams for the future
- Places you've been or activities that bring you peace

- Some people like to imagine the ocean, the mountains or some other special trip you'd like to take;

And remember...you deserve to feel OK!!

Fill Your Heart

Self-Help Strategies

There are many self-help strategies available to help people deal with the physical, emotional, intellectual and spiritual impacts of living through Covid-19. These are mostly for people with easy access to support networks that have the freedom to make choices about where they want to go and when. Most also have the resources to get books, movies and other distractions to help them cope with this time of uncertainty. Many people don't have these luxuries right now and this section is for people who find themselves facing limits due to imprisonment, living in group homes, residential facilities or mental health institutions. These strategies will also be divided into the categories of:

- ⇒ Strategies to help with physical distress
- ⇒ Strategies to help with emotional distress
- ⇒ Strategies to help with intellectual distress
- ⇒ Strategies to help with spiritual distress

STRATEGIES TO SUPPORT GREATER PHYSICAL WELLBEING

Why breathing may help:

Breathing is often a way to trigger our own internal "relaxation response." The great thing about breathing is that we do it all the time and we can do it anywhere. The way we breathe, though, can either add to our sense of stress or diminish it by triggering our "fight or flight" response. When we feel stressed, we often "shallow breathe." This can make you feel light-headed, dizzy or other physical discomforts. Deep breathing on the other hand can often center us and help us feel more grounded. For some people breathing exercises can actually cause greater anxiety, so always trust your own response. If you're feeling more anxious after deep breathing, stop and try something else!!

Post-traumatic stress can affect the way you breathe. Holding your breath, as well as breathing rapidly or shallowly can sometimes lead to increased anxiety. Awareness and controlling of the quality of our breathing can have several positive effects. Slowing and deepening how we breathe allows for an adequate intake of oxygen and output of carbon dioxide. Both are necessary for our physical well-being. Conscious breathing during times of distress can allow us

to release muscular and emotional tension, which reduces our level of distress. Focusing awareness on your breathing can shift your thoughts away from non-productive or negative thinking and bring us fully back into the present.

On the next few pages, there are a variety of breathing exercises. Try some of them out and see if they're helpful for you!

A simple deep breathing exercise…

Breathe in through your nose, counting silently 1, 2, 3, 4 as you slowly inhale.

Breathe out through your mouth, counting silently 1, 2, 3, 4, 5, 6, 7, 8 as you slowly exhale.

Repeat this kind of breathing and counting two more times.

Note how this makes you feel:

(You might want to try it a few times before deciding for sure if this is helpful or not. The first time or two can feel awkward because it's something new. But by the third time, you should have a pretty clear idea how you feel during or after deep breathing exercises.)

Belly Breathing

Normally, we breathe very shallowly, up in our chests. Learning to breathe down into our stomachs naturally helps calm us down. It also brings more oxygen into our body and brain, which helps us think more clearly. Belly breathing before a stressful situation can be very helpful. Here is what you do:

⇒ First, breathe as you normally breathe....
⇒ What parts of your body move as you breathe? What rises or moves? Notice what it feels like to breathe normally.
⇒ Now, sit and place your hand on your stomach.
⇒ With your mouth closed, breathe in for four seconds or until you feel your whole chest fill with air all the way down to your belly
⇒ Hold in the air for four seconds.
⇒ Slowly blow all the air out until it's all gone.
⇒ Try this three or four times and see if you feel a little more relaxed than you did before.

Note how this makes you feel:

(You might want to try it a few times before deciding for sure if this is helpful or not. The first time or two can feel awkward because it's something new. By the third time you should have a pretty clear idea how you feel during or after deep breathing exercises.)

90 SECOND STRESS BREAK

1ST 30 SECONDS:
Notice your breathing.
See if you can inhale longer than you exhale.

2ND 30 SECONDS:
Keep breathing slowly.
Notice any muscles in your body that are tense.
On each exhale, see if you can relax the tense places.

LAST 30 SECONDS:
Keep breathing slowly.
With each breath, say something positive to yourself, such as:
"I got this." "Keep going." "I can do this."
When the 90 seconds are up, go about your day!

Note how this makes you feel:

(Again, you might want to try it a few times before deciding for sure if breathing exercises are helpful or not. The first time or two can feel awkward because it's something new. But by the third time, you should have a pretty clear idea how you feel during or after deep breathing exercises.)

HERE'S ANOTHER ONE TO TRY:

Note how this makes you feel:

(Again, you might want to try it a few times before deciding for sure if this is helpful or not. The first time or two can feel awkward because it's something new. But by the third time, you should have a pretty clear idea how you feel during or after deep breathing exercises.)

STRATEGIES TO SUPPORT GREATER EMOTIONAL WELLBEING

Why using your senses helps:

Often, emotional distress comes from getting caught up in our "emotional brain." When we're caught in our emotional brain, we're often disconnected from our thinking brain that helps us to understand our emotions or cope without emotions. Using our senses can help us tap back into our healthy brain to help us think clearly about the emotions that may be overwhelming us.

Our five Senses

This technique will take you through your five senses to help remind you of the present. This is a calming technique that can help you get through tough or stressful situations.

Take a deep breath to begin.

LOOK:

Look around for five things that you can see and say them to yourself in your mind. For example, you could say, "I see the chair. I see the cup. I see the picture frame...."

FEEL:

Pay attention to your body and think of four things that you can feel and say them quietly in your mind. For example, you could say, "I feel my feet in my socks, my hands in my lap, the hair on the back of my neck, and the chair I am sitting on."

LISTEN:
Listen for three sounds. It could be the sound of cars outside, the sound of a clock ticking, or the sound of your stomach rumbling. Say the three things to yourself in your mind.

SMELL:
Name two things you can smell. If you can't smell anything, then just think of and imagine your two favorite smells.

TASTE:
Say one thing you can taste. It may be the toothpaste from brushing your teeth or your tongue in your mouth. If you can't taste anything, then think of your favorite things to taste.

The Spirit of
PEER
Mutual…Equal…
Been There Too…You're Not Alone!
SUPPORT
Lend a Hand, Prop Up, Encourage,
Assist, Be a Source of Strength & Comfort

Peer-to-peer support is all around us! It has been around since the dawn of time. As people, we are hardwired to **CONNECT.** It's in our DNA…. In times of stress and distress, we tend to feel comforted most by those who can say, "Yes…I've been there, too. You're not alone." Likewise, if we've been through something ourselves, we often feel a special compassion for those

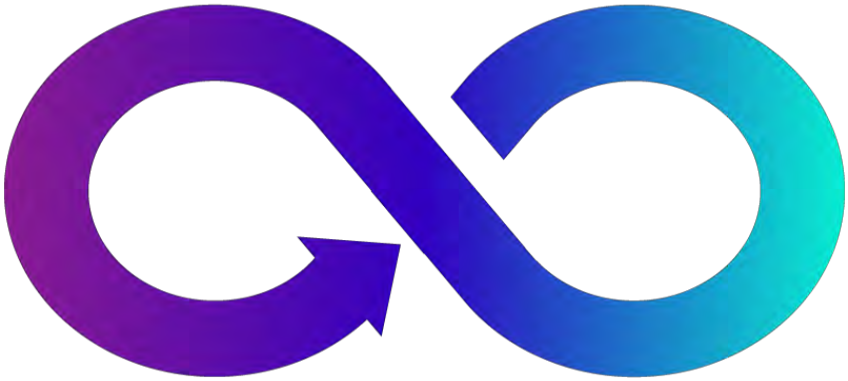
struggling with problems that we've also faced and may even have the urge to reach out a helping hand.

Sharing your story can help individuals or groups of people. It's good to share your personal story but make sure that the information you share is safe. Sometimes people take our personal information and use it against us. Unless you don't mind others outside of your peer relationship knowing, only share your experiences if you know that the person you're trying to help will keep it confidential.

> *Toni Sorenson is a well-known author who talks about 'strength from struggles. She says that walking a mile in someone else's shoes isn't as much about the physical walk or the actual shoes. Ms. Sorenson describes it is the ability to think like the other person thinks, feel what they feel, and understand why they act a certain way or are in a certain situation. Every step is about "empathy" or having experienced how another person has lived and understanding their struggles.*

Here are a few examples empathy and understanding:

- A first-time mom gets support at church from another mom with several children.
- A person hears that his co-worker lost his son in a car accident. He reaches out to the person because he also lost a child and wants to offer support.
- Someone that just had a heart attack, receives support and "lessons" learned from another person that recovered from a heart attack a year earlier.
- A widow turns to another man for support that lost his wife too. The amazing thing about people is that, even when we're struggling, we reach out and care about others. As humans we can actually get pleasure from helping others.



"Connection is the energy that exists between people when they feel seen, heard and valued; when they can give and receive without judgment; and when they derive sustenance and strength from the relationship."
Brene Brown

Did You Know?

Peer support can be formal, such as Certified Peer Specialists who work in our mental health, substance use and judicial systems. The good thing is you don't have to be a Certified Peer Specialists to provide peer support to another person. As a matter of fact, peer-to-peer relationships existed way before peer support became "formal" in professional settings with specialty trained Certified Peer Specialists.

What we know is that reaching out to others makes **US** feel better and can help **US** cope better with our own stress. In peer support we understand each other because although everyone has their own unique stories, we have similar experiences that can create a bond that allows us to learn together, figure out how to change the way we do things and the way we think, and figure out how to move forward in our lives.

EXPERTS BY EXPERIENCE: THE POWER OF SHARED EXPERIENCE

In many professional settings, people are called "experts" due to their educational background, or years working in a profession. In peer support, we are sometimes referred to as "Experts by Experience" because our knowledge and wisdom comes from surviving difficult situations.

Consider experiences you may have had such as incarceration, hospitalization, gang involvement, substance use, homelessness, and suicide attempts. Imagine what it would be like to receive support from someone else that has similar experiences. You may already know some of these people where you currently are living… Perhaps YOU are that person that reaches out when new people come around. These are examples of peer support and have proven to be an incredibly effective way to support, connect and heal together!

The irony is that it's sometimes you that feels better when you support others!

"Peer Support is different from the support you get from counselors, doctors and case managers. It is more than just being friends. In Peer Support you understand each other because although everyone has their own unique stories, you have similar experiences that can create a bond that allows you to learn together, figure out how to change the way you do things and the way you think, and to figure out how to move forward in your lives. By sharing your experiences and building trust in each other, you learn to go forward in new ways that move you away from seeing yourself as "mentally ill" and the limitations of such a view. In Peer Support, you can safely try out new ideas and new ways of being through "learning" rather than a "treatment"."

Mary Ellen Copeland

WHAT IS PEER SUPPORT?

Broadly defined, "peer support" refers to a process through which people who share common experiences or face similar challenges come together as equals to give and receive help based on the knowledge that comes through shared experiences (Riessman, 1989). A "peer" is an equal or someone with whom we share social and lifestyle similarities. "Support" expresses the kind of deeply felt empathy, encouragement, and assistance that people with shared experiences can offer one another within a reciprocal relationship.

Broken down to its simplest description, peer support is using your own personal experiences to provide support, guidance, and mentoring to those who are experiencing difficulties similar to your own.

Receiving and offering support can increase our awareness and give us the strength and courage to get through difficult circumstances like COVID-19. However, to offer support, we have to understand how each person's definition of support varies. Let's start with your experience:

In your personal experiences, how would you have defined support?

What types of relationships have been supportive in your life or recovery? What made them supportive?

What types of relationships were unsupportive? Why?

How could you find out what support means or "looks like" to your roommate, cell mate or someone that is around you right now? What could you do to provide support to your cellmate or someone else? How would you bring up the discussion in this kind of situation.

Peer to Peer Relationships: The Foundation

Healing and Recovery

We are survivors! People that have been through some of life's most difficult situations know all about healing and recovery. We are living examples of both and so in our peer relationships, we believe and share that healing and recovery is possible for everyone. We support the health and wellness of others in all of our relationships.

Mutuality

We believe in mutual, equal and shared power. We do not attempt to have power over others. In peer-to-peer relationships, we are equal and do not attempt to advise or have authority over the other person in the relationship. Instead, we recognize that mutual relationships can be healing to both individuals. Sharing this quality in a relationship can make the other person feel safe to share, which makes it easier help them.

Hope

We inspire hope, courage and/or confidence in others. Hope is a vital component of wellness. Without hope, why would anyone try to improve his/her situation or live his/her life? Hopelessness keeps people in a dark place with no plans or energy to move forward. In peer relationships, we serve as a living example of hope. Our lived experience and resilience demonstrate to others the hope of recovery or living a better life!

Empowerment

We seek to bring out the power within the other person by encouraging him/her to develop solutions to their own challenges and have the confidence in themselves to make decisions. We do that by supporting people to "find" and "use" their voice, to discover who they are and who they want to be, and by exploring all of their options, without judgement, shame, blame or guilt.

PEER SUPPORT: WHAT WE DON'T DO

1. **We do not label a person or diagnose them!**

   It is important to remember that, although we may share similar experiences with others, the treatment, approaches, medications, diagnosis, etc. that we experienced may not work for another person. Every person is unique and there is a lot that goes into clinical treatment. Therefore, if a person is receiving treatment, our role is to support them and to be educated about their treatment options. By doing this we can help them make informed decisions and be prepared to discuss any concerns they may have with their doctor or treatment provider.

2. **We are not their parent!**

   There is a difference between offering peer support and telling people what to do, or imposing rules or consequences on their personal choices. Remember, we are equal partners in the relationship and as such, we share with and learn from one another.

3. **We NEVER offer advice!**

   There is a difference between offering support, sharing experience and giving advice. People seldom take advice. This is especially so when they don't have the same resources we have. Our role is to support people to find their own solutions, not have the answers to all of their personal challenges. There is a skill to offering support without giving advice and it's one that can be practiced and learned over time.

PEER SUPPORT: WHAT IS OUR ROLE?

- **We serve as a resource:**

  We offer our experience and "lessons learned" to be a resource to others

- **We offer support:**

  We offer support by being present, providing encouragement, giving assistance, comfort and listening without advising and without judgement.

- **We serve as a coach:**

  Take a moment to reflect on the meaning that "coach" has for you; what do coaches do and what are the qualities of an effective coach? A peer relationship serves a similar role by using their experience, skills and information to guide people through difficult situations and celebrate successes.

- **We are partners together:**

  We seek to truly understand others where they are, and offer the type of support they are requesting without judgment, labels, assumptions or biases. In a partnership, we both contribute to the relationship without asserting control over the other. Partners are "in this together" and our partnership can enhance the partner's wellness as well as yours. A partner doesn't walk in front of you and pull, nor do they walk behind you and push. Instead, they walk side-by-side, shoulder-to-shoulder, participating, engaging, and discussing together.

PEER SUPPORT: WHAT WE DO!

We accept the person where they are!

This means it's important to understand that who the person is at the moment is not who the person may be in the future. Offering help or assistance to someone and judging them by one moment in their life will often make them NOT want to come to you for help.

We are friends who remember that we were once where they were and may be again!

Friends understand that we sometimes make mistakes in life but with help we apologize and correct our mistakes to be better for ourselves and other people in our lives. Mistakes are how we learn to be better people because we learn from our mistakes.

We use non-judgmental listening!

Non-judgmental listening is about trying to really understand the other person. As the listener, we should put our own views aside and try not to get distracted by our personal thoughts and feelings.

What is NON-JUDGMENTAL LISTENING?

We should show an attitude of acceptance and genuine empathy:
When we genuinely care about a person, we are more interested all of them. If we love a person when they're doing well, then certainly we can love a person when they make mistakes! Talking about problems is good but it feels great to know someone cares enough to genuinely listen.

We use our body language and verbal skills to show that we're listening to hear with genuine interest; not to defend or judge:
If you're only listening to defend yourself or half-way paying attention, this can be hurtful. Even if the person doesn't say anything, over time you will find that the person no longer wants you to help them. Can you remember a time when you needed help and people didn't listen or were distracted while you were talking to them? If they were playing on their cell phone or paying attention to other people, did you feel like they care?

We maintain a positive body language. Even when the person says something that's shocking or could be interpreted as hurtful:

This means that we turn off electronics or go to an area where the TV is not so loud. Turn your body towards the person and ask questions if you don't understand. Be sure your tone of voice and facial expressions are showing positive support.

We recognize cultural differences and help based on who the person is, not who we want them to be:
Sometimes it helps when people know that you're not judging them or where they were raised. Problems don't care about culture or ethnicity and when we're genuinely listening to help, neither should we.

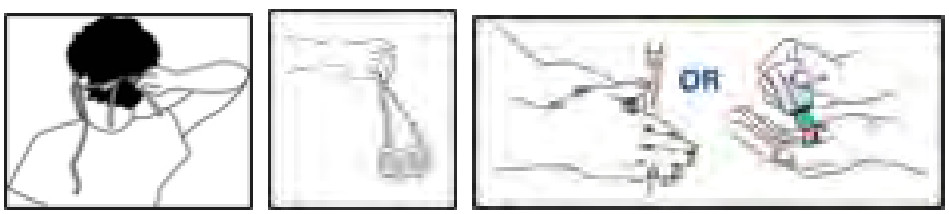
It's okay to have conflict!

Conflict can feel hurtful but the truth is that conflict is sometimes necessary. Conflict can tell us where things aren't working well. This can be in a relationship or within ourselves. It may help to think of conflict as a cut on our skin. We know where to clean it and even if it's uncomfortable while it's healing, we know that our injury will heal. Conflict is the same except it's an emotional hurt instead of a physical hurt. Cleaning emotional hurts can be done by using some of the tips in this manual. You can talk to someone. You can journal or you can share your story with someone else. As long as you don't keep it to yourself, conflict can't hurt you.

Ex C

When putting on gloves, wash your hands, pull gloves on, placing over the cuffs of your shirt or medical gown if applicable. The CDC recommends removing gloves if they become torn, damaged, or soiled. Perform hand hygiene before putting on new gloves. To remove gloves:

To remove a mask, untie the bottom then the top ties, or if the mask has elastic bands, remove the mask by grasping the elastic loops (not the cloth or paper of the mask), remove from face, and discard. Avoid touching the front of the mask as you discard. Wash your hands when you're done!



Disposal of used PPE

Once you have properly doffed your PPE, proper disposal of all used PPE is very important. At identified locations within the CDF and CTF, waste cans will be placed to receive ***used*** PPE items.

SARS-CoV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

PROJECT LOCATION: **DISTRICT OF COLUMBIA DEPARTMENT OF CORRECTIONS**

CLEANING CONTRACTORS: **SPECTRUM MANAGEMENT, LLC and ROCK SOLID DISTRICT GROUP, LLC**

1.0 Introduction

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

The purpose of this Protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors. Cleaning crews should clean and disinfect all identified areas, focusing especially on frequently touched surfaces.

The procedures described in this Protocol shall be executed by the current contractors, Spectrum Management, LLC (Spectrum), and Rock Solid District Group, LLC (Rock Solid), with oversight by Potomac-Hudson Engineering, Inc. (PHE).

2.0 Implementation

2.1 Overview

The procedures described in the Protocol comply with or exceed the United States Centers for Disease Control and Prevention's (CDC's) recommended practices in response to the COVID-19 pandemic. It is important to note that the cleaning and disinfection procedures described herein cannot remove **ALL** viral particles from surfaces; however, following these procedures will substantially decrease the number on surfaces and thereby reduce the risk of infection and spreading.

2.2 Employee Screening

As part of existing entry procedures, all Spectrum and Rock Solid employees shall undergo a temperature check prior to each day's work for signs of possible COVID-19 infection before being allowed to enter the facility. This is currently being conducted for all DOC employees, visitors, contractors, and any other visitors to the facility. Persons who screen positive, defined as having a temperature of 100.4 degrees Fahrenheit or greater will return to their vehicle.

2.3 General Procedures

i. The Spectrum and Rock Solid crew leaders shall meet at the beginning of each work day with the DOC point of contact for the facility(ies) to be cleaned to discuss the areas to be cleaned on that day and to coordinate the movement of cleaning crew staff through the facility.

ii. Whenever possible, personnel shall attempt to wait at least 24 hours to enter an area or room previously occupied by an individual known to be infected with SARS-CoV-2. The National Institute of Health (NIH) has determined that the virus can remain active in the air for up to 3 hours and for up to 2 to 3 days on surfaces; however, some organizations have cautioned that the virus can remain active on surfaces for even longer periods of time.

iii. If surfaces are visibly dirty, they shall be cleaned using a detergent or soap and water prior to disinfection. If a surface or object has been soiled with blood or other bodily fluids, initially treat the area with a 10 percent bleach solution; then proceed to disinfecting the area for COVID-19.

iv. The product to be used for COVID-19 disinfecting is *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*. (A copy of the Safety Data Sheet [SDS] for this product is included in ***Attachment A***). The product, as purchased, contains 8 percent hydrogen peroxide and has a pH of 0.5 – 1.5 (extremely corrosive) and will be provided by the DOC. Use of the product may generate irritating vapors and is corrosive to the eyes and skin. Avoid using in small spaces with limited air exchange. Avoid touching any areas of your face while cleaning to prevent contact with the disinfecting compound and potential virus.

v. An alternate product, *Xpress Detergent Disinfectant*, may also be used. This product will typically be used by Spectrum personnel in the fogging machine. An SDS for this product is also included int ***Attachment A***.

vi. Spectrum and Rock Solid shall use the designated product in accordance with the manufacturer's instructions (mixed at 6 ounces per gallon), to include ensuring the required 45-second contact time of the wet disinfectant is met. The PHE industrial hygienist(s) shall conduct random observations/inspections of disinfectant use to verify that the product is used properly, and the designated contact time is met.

vii. When mixing disinfectant, personnel shall wear eye and face protection, to include goggles, face shields, or equivalent PPE. Likewise, similar protection shall be used during fogging activities.

viii. In order to ensure that the correct contact time is met, contractor personnel will apply rag/cloth soaked with the Ecolab Peroxide Multi Surface Cleaner and Disinfectant dilute mixture and liberally wipe the cloth on all applicable surfaces to ensure complete coverage. The entire surface shall be kept visibly wet for at least 45 seconds. Once the contact time has been achieved, the surface may be wiped down with a dry rag or allowed to air dry, depending on the location and amount of traffic in a given area

2.4 Disinfecting Procedures

i. Cleaning/disinfecting shall focus on all high-touch surfaces and areas, to include but not be limited to: desks, computer mouses and keyboards, phones, lockers, cubbies, window sills and counter tops, doors, frames, doorknobs and push bars, elevator buttons, light switches, handrails, bathroom floors, faucet handles, toilet handles, toilet stall door locks, towel

dispensers and hand driers, showers, kitchen areas, cafeterias, office common areas, nursing stations, and other rooms. An alcohol solution shall be used for all electronics. These services shall be carried out in accordance with the CDC's *Coronavirus Disease 2019 (COVID-19) Environmental Cleaning and Disinfection Recommendations* without restriction.

ii. Ventilate the rooms/spaces prior to and during cleaning/disinfecting. If ventilation through open windows is not possible, use a high-volume, high efficiency particulate air (HEPA) filter system to remove airborne particles from the air during cleaning. Temporarily increase the cleaning area's humidity to approximately 50 percent relative humidity (RH), if possible.

iii. Prior to disinfecting, Spectrum and Rock Solid shall perform general cleaning, removing dirt and debris using the *Ecolab Orange Force Multi Surface Cleaner and Degreaser*, to include floor mopping. Clean all dust from horizontal surfaces with a towel dampened with the cleaner/degreaser to minimize re-aerosolization of settled contaminated dust and particles. Use a slow, smooth wiping action and change out or wet clean the towel on a regular basis to minimize re-aerosolization of collected dust and particulates.

iv. Dry sweeping with a typical straw or push-broom is not permitted. Instead, use of an electrostatic broom or brush (e.g., Swiffer Sweeper or equivalent) is permitted to remove dust and dirt particles prior to wet mopping.

v. When mopping, ensure the floor surfaces that are disinfected stay wet for at least 45 seconds. Frequently re-wet the mop head to ensure a thorough soaking of the floor. Consider changing mop water at least once per day, and ensure designated mops are used for bathrooms and that these mops are not used elsewhere. Ensure that all stairwells in the housing units are mopped as well.

vi. Pay special attention to window ledges and other commonly dusty surfaces. Also pay special attention to frequently touched surfaces, such as railings, ledges, and countertops. Ensure that glass surfaces (e.g., windows, mirrors) are also disinfected.

vii. Disinfect **ALL** vertical surfaces to a height of at least 6 feet above the floor, including but not limited to walls, windows, columns, doors, rails, etc.

viii. As part of this protocol, it is strongly recommended that the contractor clean and disinfect heating, ventilation, and air conditioning (HVAC) supply and exhaust grills/diffusers, including removal of caked-on debris, dust, grease, etc. This will likely require the use of a ladder as these features are typically located at ceiling level.

ix. Disinfect floors by mopping with *Ecolab Peroxide Multi Surface Cleaner and Disinfectant* (this is the second round of mopping). Avoid aerosolizing the dirty cleaning liquid by using steady and sweeping mop swipes and careful, deliberate mop head squeezes.

x. Restrooms shall receive special attention due to the tendency of the SARS-CoV-2 virus to bioaccumulate within feces, vomit, sputum, and urine. Clean any surfaces that have visible blood, stool, or body fluids.

xi. Trash liners shall be removed, and the trash receptacles disinfected. After air drying of the trash receptacles, a new liner shall be inserted in each receptacle.

xii. Following disinfecting, the DOC representative shall identify areas for fogging. Fogging shall be accomplished using ultra-low-volume foggers (a sprayer shall not be used as a substitute for a fogger) to ensure that all surfaces are adequately saturated. In general, fogging of walls shall be

applied to a height of 6 feet. When fogging, employees shall wear a full-face respirator equipped with organic vapor and acid gas cartridges. Access to the areas in which fogging is conducted shall be limited until the fogging aerosols have settled.

xiii. For soft (porous) surfaces such as carpeted floors, rugs, and drapes, remove visible contamination if present, and clean with appropriate cleaners indicated for use on these surfaces. If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely. Otherwise, use products with the U.S. Environmental Protection Agency (USEPA)-approved emerging viral pathogens claims that are suitable for porous surfaces.

xiv. Vacuum carpeting and other fabrics with vacuums equipped with HEPA filtration systems. Take appropriate precautions when changing the vacuum HEPA or pre-filter to minimize exposures to airborne dusts.

xv. Although the procedures described herein are designed for Spectrum and Rock Solid, ensure that any other entity performing disinfectant cleaning at the facilities (e.g., Summit in the dining rooms or the inmate cleaning detail) are following these procedures as well or are following equivalent procedures.

2.5 Employee Safety

i. Spectrum and Rock Solid employees shall complete the appropriate training, to include COVID-19 awareness, hazard communication (with specific attention on the hazards of the cleaners and disinfectants to be used), and bloodborne pathogens exposure control.

ii. Protection from potential viral infection from skin contact and aerosol inhalation is required through the use of PPE and hand washing. The minimal level of PPE for workers performing the decontamination and disinfection includes a face mask and nitrile gloves. Additional PPE shall be permitted as desired, to include half-mask or full-face negative pressure respirators with dual P-100 organic vapor and acid gas cartridges and full-body Tyvek coveralls (with shoe coverings). Gloves may be sealed to the coveralls with duct tape for additional protection, and replaced immediately if punctured or torn. Crew members shall inspect each other to verify that the PPE is donned correctly prior to beginning work. Cleaning employees shall be reminded to avoid touching any unprotected parts of the face. Employees shall wear goggles while transferring and/or diluting the *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*, and while emptying buckets. Employees shall be medically approved, trained, and properly fit-tested to wear the respective respirators.

iii. If any breaches should occur in the PPE or if contact with unprotected skin occurs, the following steps must be followed:

   a. immediately stop work;
   b. remove the damaged PPE;
   c. wash the skin with soap and warm water (if soap and water are not available, use an alcohol-based hand sanitizer that contains 60 to-95 percent alcohol); and
   d. report the breach to the crew leader.

iv. Extension cords for portable electrical equipment will be protected by ground fault circuit interrupters (GFCI).

v. Slip hazards are a potential concern due to the wet application (mopping of floors). Non-slip shoes shall be worn.

3.0 Quality Control and Oversight

The PHE industrial hygienist (or designated DC DOC employee) shall conduct random observations/inspections of wiped/mopped/fogged areas and document that the required contact time for the disinfectant (45 seconds) was achieved. The form in ***Attachment B*** may be used for this purpose, if desired.

GSA Contract No. 7QRAA18D0074
Task Order No. CW82753

INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of this protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors. PHE provided a draft protocol to DC DOC on June 15, 2020, and the procedures described in the protocol were subsequently implemented later that week.

AUDIT OVERVIEW

SCOPE

PHE was tasked with inspecting the cleaning procedures used by two independent contractors at two DC DOC facilities after implementation of the procedures described in the Draft Protocol. PHE performed these inspections on June 29 and July 1, 2020. This report documents observed deviations, omissions, inconsistencies, and deficiencies, along with corrective action recommendations.

CENTRAL DETENTION FACILITY

On June 29, 2020, PHE inspected implementation of the cleaning procedures of Rock Solid District Group, LLC at the DC DOC's Central Detention Facility (CDF). An In-Brief Meeting was held prior to the inspection and was attended by:

- Ms. Gitana Stewart-Ponder (DOC)
- Ms. Gloria Robertson (DOC)
- Sgt. D. Worthan (DOC)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

At the conclusion of the inspection, an Out-Brief Meeting was held. This meeting was attended by:

- Mr. Lennard Johnson, Warden (DOC)
- Ms. Kathy Landerkin Deputy Warden (DOC)
- Ms. Rena Myles (DOC)
- Ms. Gloria Roberts (DOC)
- Ms. Gitana Stewart-Ponder (DOC) (via telephone)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

CORRECTIONAL TREATMENT FACILITY

On July 1, 2020, PHE inspected the cleaning procedures of Spectrum Management, LLC at the DC DOC's Correctional Treatment Facility (CTF). An Out-Brief Meeting was held at the conclusion of the inspection and was attended by:

- Ms. Gloria Robertson (DOC)
- Ms. Jackie Smith (DOC)
- Ms. Florinda Eaglin (DOC)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

DRAFT SUMMARY OF FINDINGS

Table 1 summarizes findings observed during the June 29 and July 1, 2020 onsite inspections. The table also provides recommended actions to correct the findings.

Following the table is a brief Action Plan with recommendations for implementing the corrective actions identified in ***Table 1***.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT	
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*) being used. In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant.	Sufficiently spraying to adequately wet and entire surface such as a table or wall is extremely difficult and time-consuming. It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces should then be wiped dry with a dry rag or are allowed to air-dry, as appropriate in a given area. This will further ensure that the entire surface is adequately wetted for the duration of the required contact time.
The contractor did not consistently allow for adequate wetting of the floor during mopping. On several occasions it was observed that a wet mop was used for an overly extensive period of time before being re-wetted. This resulted in portions of the floor being inadequately damped with a sufficient amount of disinfectant to ensure a 45 second contact time.	Ensure that mops are frequently wetted in the slop bucket during floor mopping. Consider requiring the contractor to provide additional mop buckets and dollies so that each person mopping has access to their own dolly that can be toted along with them as they mop. Based on site observations, there was an insufficient number of mop dollies. This required the dollies to remain in a centralized position and discouraged floor cleaners from more frequently wetting their mop heads. Additionally, the mop buckets themselves, which have their own sets of wheels on them, should be removed from the dollies and transported with those mopping the floors.
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
Currently, the cleaning contractor is only responsible for disinfecting the floor and doorknobs/door handles in the basement. Although DOC staff are responsible for the remaining areas, it is unclear if they know all the surfaces they need to clean and/or if they are aware of the proper contact time for the disinfectant.	Ensure that staff cleaning personnel are familiar with and are properly implementing the cleaning protocols currently being provided to the third-party contractors.
The contractor was observed cleaning windows, mirrors, and other glass surfaces with an ammonium-based window cleaner (Ecolab Oasis 255SF Industrial Window Cleaner) as opposed to an EPA-registered product approved for COVID-19.	Test the hydrogen peroxide-based disinfectant on glass surfaces. If acceptable, consider using the disinfectant on these surfaces instead of, or in addition to, traditional window cleaning chemicals.
In some cases, contractor personnel was observed cleaning doorknobs, door handles, and other frequently-touched surfaces with a hand sanitizer. While this is technically sufficient for disinfection, it is not be applied consistently in all areas and the proper contact time may or may not be properly implemented.	Ensure that all chemicals and cleaning procedures are consistently applied throughout the facility. If hand sanitizer is to be used on a regular basis for these surfaces, they should be documented in the cleaning protocol.
The contractor (Summit) that currently provides food service duties in the cafeteria is solely responsible for cleaning and disinfecting that area of the facility. It is not known if they are aware of or are following the proper protocols for disinfection in a manner consistent with the other areas of the facility.	Ensure that Summit is performing proper disinfection in a manner that is consistent with or exceeds the procedures being used elsewhere at the facility.
CONDITIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT	
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*) being used. In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant. Although this contractor (Spectrum) generally applied greater volumes of the disinfectant with the sprayers in a given area as compared to Rock Solid, it was still observed to be insufficient.	Sufficiently spraying to adequately wet and entire surface such as a table or wall is extremely difficult and time-consuming. It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces should then be wiped dry with a dry rag or be allowed to air-dry, as appropriate in a given area. This will further ensure that the entire surface is adequately wetted for the duration of the required contact time.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure that the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.
The contractor was not always performing its duties in a consistent manner. The following observations were made: • Some of the grated stairwells in the housing areas were mopped, while others were not. • In one area, contractor personnel were using hand sanitizer to disinfect doorknobs, door handles, and phones. However, in other areas, the peroxide disinfectant was used. • In the 96 Medical Area, the contractor did not clean the area between the gates and the elevators. However, this area was cleaned in the 82 Medical Area.	The following recommendations are made: • Ensure that all stairwells in the housing units are mopped. • Since different disinfectants require different contact times (depending on the active ingredients), ensure that the contractor is consistent in what they use. The contact time for ethanol (5 minutes) is much greater than that for peroxide (45 seconds). • Ensure that the contractor is clear on what areas are considered within their scope of work and which areas are not and ensure that they clean and disinfect all of the areas for which they are responsible.
The contractor was observed mixing and handling both the concentrated form of the peroxide disinfectant as well as the diluted form. In its concentrated form, the disinfectant has a pH of less than 2 and is extremely corrosive. Even in its diluted form, the disinfectant is still corrosive and presents danger to users. Contractor personnel were not wearing certain personal protective equipment (PPE) while performing these tasks. The contractor was also observed using the fogging unit without eye protection.	It is recommended that the personnel handling and mixing the disinfectant in the mixing room wear goggles and/or face shield to protect their eyes and face. Consider also requiring longer gloves that cover exposed skin between hands and sleeves. Consider requiring the contractor to where eye protection during fogging.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The following POSITIVE observations were made with respect to Spectrum during the site inspection: • Personnel changed out mop water and/or mop heads at certain times throughout the day. • The peroxide disinfectant was used on windows, mirrors, and other glass surfaces in lieu of a typical glass cleaner. • The walls in the bathrooms were scrubbed with a hard-bristled mop.	Consider instructing Rock Solid personnel to follow some of these procedures as well.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

UPDATED PROTOCOL

As the first step in this CAP, PHE has prepared an updated COVID-19 Disinfection and Cleaning Protocol to help guide the cleaning contractors (see ***Appendix A***). The protocol has been improved to focus on and address observed contractor deficiencies. The update also revises some of the procedural language to more closely reflect site conditions, based on observations made during the site visit and conversations with both contractor and DOC personnel.

Specific items added to the protocol to correct deficiencies include:

- Added emphasis on thoroughly wetting the floors during mopping. The updates include requiring the contractors to remove mop buckets from the carts and/or providing additional carts with mop buckets to be available.
- Removing spray bottle application of the disinfectant as an option and requiring that wet cloths be used to more thoroughly wet each surface and ensure full contact time is met across the entire surface.
- Indicating that dry-sweeping is only permissible if an electrostatic broom or brush is used to collect dust and dirt with minimal aerosolization.
- Re-emphasizing that ALL vertical surfaces must be disinfected, with specific examples.
- Adding additional PPE requirements when working in the mixing room.

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

When providing the updated protocol, DOC should specifically point out those items which have changed from the draft protocol and ensure that the contractors understand all of their responsibilities and expectations.

PERIODIC RE-INSPECTIONS

As part of the existing scope of work, PHE is scheduled to conduct up two (2) follow up monthly site inspections to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected. As part of these follow-up inspections, PHE will hold a short, informal out-brief at the end of each day to discuss any findings or other observations made, and present options for correction.

PHE also recommends that DOC personnel perform additional inspections, as needed, based on the results of the PHE follow-up inspections, if deficiencies continue to be identified.

EFFECTIVENESS EVALUATION

The DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future. The DOC will also continue to perform voluntary testing of individuals onsite (both employees and inmates) every two weeks. As the year continues on, it is likely that additional waves or peaks may be observed throughout the region. DOC should closely monitor the number of persons onsite testing positive during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel from the virus.

This page intentionally blank.

APPENDIX A

SARS-COV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

SARS-CoV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

PROJECT LOCATION: **DISTRICT OF COLUMBIA DEPARTMENT OF CORRECTIONS**

CLEANING CONTRACTORS: **SPECTRUM MANAGEMENT, LLC and ROCK SOLID DISTRICT GROUP, LLC**

1.0 Introduction

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

The purpose of this Protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors. Cleaning crews should clean and disinfect all identified areas, focusing especially on frequently touched surfaces.

The procedures described in this Protocol shall be executed by the current contractors, Spectrum Management, LLC (Spectrum), and Rock Solid District Group, LLC (Rock Solid), with oversight by Potomac-Hudson Engineering, Inc. (PHE).

2.0 Implementation

2.1 Overview

The procedures described in the Protocol comply with or exceed the United States Centers for Disease Control and Prevention's (CDC's) recommended practices in response to the COVID-19 pandemic. It is important to note that the cleaning and disinfection procedures described herein cannot remove **ALL** viral particles from surfaces; however, following these procedures will substantially decrease the number on surfaces and thereby reduce the risk of infection and spreading.

2.2 Employee Screening

As part of existing entry procedures, all Spectrum and Rock Solid employees shall undergo a temperature check prior to each day's work for signs of possible COVID-19 infection before being allowed to enter the facility. This is currently being conducted for all DOC employees, visitors, contractors, and any other visitors to the facility. Persons who screen positive, defined as having a temperature of 100.4 degrees Fahrenheit or greater will return to their vehicle.

2.3 General Procedures

i. The Spectrum and Rock Solid crew leaders shall meet at the beginning of each work day with the DOC point of contact for the facility(ies) to be cleaned to discuss the areas to be cleaned on that day and to coordinate the movement of cleaning crew staff through the facility.

ii. Whenever possible, personnel shall attempt to wait at least 24 hours to enter an area or room previously occupied by an individual known to be infected with SARS-CoV-2. The National Institute of Health (NIH) has determined that the virus can remain active in the air for up to 3 hours and for up to 2 to 3 days on surfaces; however, some organizations have cautioned that the virus can remain active on surfaces for even longer periods of time.

iii. If surfaces are visibly dirty, they shall be cleaned using a detergent or soap and water prior to disinfection. If a surface or object has been soiled with blood or other bodily fluids, initially treat the area with a 10 percent bleach solution; then proceed to disinfecting the area for COVID-19.

iv. The product to be used for COVID-19 disinfecting is *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*. (A copy of the Safety Data Sheet [SDS] for this product is included in ***Attachment A***). The product, as purchased, contains 8 percent hydrogen peroxide and has a pH of 0.5 – 1.5 (extremely corrosive) and will be provided by the DOC. Use of the product may generate irritating vapors and is corrosive to the eyes and skin. Avoid using in small spaces with limited air exchange. Avoid touching any areas of your face while cleaning to prevent contact with the disinfecting compound and potential virus.

v. An alternate product, *Xpress Detergent Disinfectant*, may also be used. This product will typically be used by Spectrum personnel in the fogging machine. An SDS for this product is also included int ***Attachment A***.

vi. Spectrum and Rock Solid shall use the designated product in accordance with the manufacturer's instructions (mixed at 6 ounces per gallon), to include ensuring the required 45-second contact time of the wet disinfectant is met. The PHE industrial hygienist(s) shall conduct random observations/inspections of disinfectant use to verify that the product is used properly, and the designated contact time is met.

vii. When mixing disinfectant, personnel shall wear eye and face protection, to include goggles, face shields, or equivalent PPE. Likewise, similar protection shall be used during fogging activities.

viii. In order to ensure that the correct contact time is met, contractor personnel will apply rag/cloth soaked with the Ecolab Peroxide Multi Surface Cleaner and Disinfectant dilute mixture and liberally wipe the cloth on all applicable surfaces to ensure complete coverage. The entire surface shall be kept visibly wet for at least 45 seconds. Once the contact time has been achieved, the surface may be wiped down with a dry rag or allowed to air dry, depending on the location and amount of traffic in a given area

2.4 Disinfecting Procedures

i. Cleaning/disinfecting shall focus on all high-touch surfaces and areas, to include but not be limited to: desks, computer mouses and keyboards, phones, lockers, cubbies, window sills and counter tops, doors, frames, doorknobs and push bars, elevator buttons, light switches, handrails, bathroom floors, faucet handles, toilet handles, toilet stall door locks, towel

dispensers and hand driers, showers, kitchen areas, cafeterias, office common areas, nursing stations, and other rooms. An alcohol solution shall be used for all electronics. These services shall be carried out in accordance with the CDC's *Coronavirus Disease 2019 (COVID-19) Environmental Cleaning and Disinfection Recommendations* without restriction.

ii. Ventilate the rooms/spaces prior to and during cleaning/disinfecting. If ventilation through open windows is not possible, use a high-volume, high efficiency particulate air (HEPA) filter system to remove airborne particles from the air during cleaning. Temporarily increase the cleaning area's humidity to approximately 50 percent relative humidity (RH), if possible.

iii. Prior to disinfecting, Spectrum and Rock Solid shall perform general cleaning, removing dirt and debris using the *Ecolab Orange Force Multi Surface Cleaner and Degreaser*, to include floor mopping. Clean all dust from horizontal surfaces with a towel dampened with the cleaner/degreaser to minimize re-aerosolization of settled contaminated dust and particles. Use a slow, smooth wiping action and change out or wet clean the towel on a regular basis to minimize re-aerosolization of collected dust and particulates.

iv. Dry sweeping with a typical straw or push-broom is not permitted. Instead, use of an electrostatic broom or brush (e.g., Swiffer Sweeper or equivalent) is permitted to remove dust and dirt particles prior to wet mopping.

v. When mopping, ensure the floor surfaces that are disinfected stay wet for at least 45 seconds. Frequently re-wet the mop head to ensure a thorough soaking of the floor. Consider changing mop water at least once per day, and ensure designated mops are used for bathrooms and that these mops are not used elsewhere. Ensure that all stairwells in the housing units are mopped as well.

vi. Pay special attention to window ledges and other commonly dusty surfaces. Also pay special attention to frequently touched surfaces, such as railings, ledges, and countertops. Ensure that glass surfaces (e.g., windows, mirrors) are also disinfected.

vii. Disinfect **ALL** vertical surfaces to a height of at least 6 feet above the floor, including but not limited to walls, windows, columns, doors, rails, etc.

viii. As part of this protocol, it is strongly recommended that the contractor clean and disinfect heating, ventilation, and air conditioning (HVAC) supply and exhaust grills/diffusers, including removal of caked-on debris, dust, grease, etc. This will likely require the use of a ladder as these features are typically located at ceiling level.

ix. Disinfect floors by mopping with *Ecolab Peroxide Multi Surface Cleaner and Disinfectant* (this is the second round of mopping). Avoid aerosolizing the dirty cleaning liquid by using steady and sweeping mop swipes and careful, deliberate mop head squeezes.

x. Restrooms shall receive special attention due to the tendency of the SARS-CoV-2 virus to bioaccumulate within feces, vomit, sputum, and urine. Clean any surfaces that have visible blood, stool, or body fluids.

xi. Trash liners shall be removed, and the trash receptacles disinfected. After air drying of the trash receptacles, a new liner shall be inserted in each receptacle.

xii. Following disinfecting, the DOC representative shall identify areas for fogging. Fogging shall be accomplished using ultra-low-volume foggers (a sprayer shall not be used as a substitute for a fogger) to ensure that all surfaces are adequately saturated. In general, fogging of walls shall be

applied to a height of 6 feet. When fogging, employees shall wear a full-face respirator equipped with organic vapor and acid gas cartridges. Access to the areas in which fogging is conducted shall be limited until the fogging aerosols have settled.

xiii. For soft (porous) surfaces such as carpeted floors, rugs, and drapes, remove visible contamination if present, and clean with appropriate cleaners indicated for use on these surfaces. If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely. Otherwise, use products with the U.S. Environmental Protection Agency (USEPA)-approved emerging viral pathogens claims that are suitable for porous surfaces.

xiv. Vacuum carpeting and other fabrics with vacuums equipped with HEPA filtration systems. Take appropriate precautions when changing the vacuum HEPA or pre-filter to minimize exposures to airborne dusts.

xv. Although the procedures described herein are designed for Spectrum and Rock Solid, ensure that any other entity performing disinfectant cleaning at the facilities (e.g., Summit in the dining rooms or the inmate cleaning detail) are following these procedures as well or are following equivalent procedures.

2.5 Employee Safety

i. Spectrum and Rock Solid employees shall complete the appropriate training, to include COVID-19 awareness, hazard communication (with specific attention on the hazards of the cleaners and disinfectants to be used), and bloodborne pathogens exposure control.

ii. Protection from potential viral infection from skin contact and aerosol inhalation is required through the use of PPE and hand washing. The minimal level of PPE for workers performing the decontamination and disinfection includes a face mask and nitrile gloves. Additional PPE shall be permitted as desired, to include half-mask or full-face negative pressure respirators with dual P-100 organic vapor and acid gas cartridges and full-body Tyvek coveralls (with shoe coverings). Gloves may be sealed to the coveralls with duct tape for additional protection, and replaced immediately if punctured or torn. Crew members shall inspect each other to verify that the PPE is donned correctly prior to beginning work. Cleaning employees shall be reminded to avoid touching any unprotected parts of the face. Employees shall wear goggles while transferring and/or diluting the *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*, and while emptying buckets. Employees shall be medically approved, trained, and properly fit-tested to wear the respective respirators.

iii. If any breaches should occur in the PPE or if contact with unprotected skin occurs, the following steps must be followed:

   a. immediately stop work;
   b. remove the damaged PPE;
   c. wash the skin with soap and warm water (if soap and water are not available, use an alcohol-based hand sanitizer that contains 60 to-95 percent alcohol); and
   d. report the breach to the crew leader.

iv. Extension cords for portable electrical equipment will be protected by ground fault circuit interrupters (GFCI).

v. Slip hazards are a potential concern due to the wet application (mopping of floors). Non-slip shoes shall be worn.

3.0 Quality Control and Oversight

The PHE industrial hygienist (or designated DC DOC employee) shall conduct random observations/inspections of wiped/mopped/fogged areas and document that the required contact time for the disinfectant (45 seconds) was achieved. The form in ***Attachment B*** may be used for this purpose, if desired.

ATTACHMENT A – SAFETY DATA SHEETS (SDSs)

SAFETY DATA SHEET

PEROXIDE MULTI SURFACE CLEANER AND DISINFECTANT

SECTION 1. PRODUCT AND COMPANY IDENTIFICATION

Product name	:	PEROXIDE MULTI SURFACE CLEANER AND DISINFECTANT
Other means of identification	:	Not applicable
Recommended use	:	Disinfectant
Restrictions on use	:	Reserved for industrial and professional use.
Product dilution information	:	3.125 % - 4.6875 %
Company	:	Ecolab Inc. 1 Ecolab Place St. Paul, Minnesota USA 55102 1-800-352-5326
Emergency health information	:	1-800-328-0026 (US/Canada), 1-651-222-5352 (outside US)
Issuing date	:	02/03/2020

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Product AS SOLD

Acute toxicity (Oral)	:	Category 4
Acute toxicity (Inhalation)	:	Category 3
Acute toxicity (Dermal)	:	Category 4
Skin corrosion	:	Category 1A
Serious eye damage	:	Category 1
Skin sensitization	:	Category 1

Product AT USE DILUTION

Eye irritation	:	Category 2B

GHS label elements

Product AS SOLD

Hazard pictograms :

Signal Word : Danger

Hazard Statements : Harmful if swallowed or in contact with skin.
Causes severe skin burns and eye damage.
May cause an allergic skin reaction.
Toxic if inhaled.

Precautionary Statements : **Prevention:**
Avoid breathing dust/ fume/ gas/ mist/ vapors/ spray. Wash skin thoroughly after handling. Do not eat, drink or smoke when using this product. Use only outdoors or in a well-ventilated area. Contaminated work clothing must not be allowed out of the workplace. Wear

protective gloves/ protective clothing/ eye protection/ face protection.
Response:
IF SWALLOWED: Call a POISON CENTER/doctor if you feel unwell. Rinse mouth. IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/doctor. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/doctor. If skin irritation or rash occurs: Get medical advice/ attention. Wash contaminated clothing before reuse.
Storage:
Store in a well-ventilated place. Keep container tightly closed. Store locked up.
Disposal:
Dispose of contents/ container to an approved waste disposal plant.

Product AT USE DILUTION

Signal Word	:	Warning
Hazard Statements	:	Causes eye irritation.
Precautionary Statements	:	**Prevention:** Wash skin thoroughly after handling. **Response:** IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/ attention.

Product AS SOLD

Other hazards	:	Do not mix with bleach or other chlorinated products – will cause chlorine gas.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Product AS SOLD

Pure substance/mixture	:	Mixture

Chemical name	**CAS-No.**	**Concentration (%)**
dodecylbenzene sulfonic acid	27176-87-0	5 - 10
Hydrogen peroxide	7722-84-1	8
Proprietary Fragrance	Proprietary Ingredient	0.1 - 1
Sulfuric acid	7664-93-9	0.1 - 1

Product AT USE DILUTION

Chemical name	**CAS-No.**	**Concentration (%)**
dodecylbenzene sulfonic acid	27176-87-0	0.1 - 1
Hydrogen peroxide	7722-84-1	0.375

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact	:	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use

		a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention immediately.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

In case of eye contact	:	Rinse with plenty of water.
In case of skin contact	:	Rinse with plenty of water.
If swallowed	:	Rinse mouth. Get medical attention if symptoms occur.
If inhaled	:	Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Oxidizer. Contact with other material may cause fire.
Hazardous combustion products	:	Decomposition products may include the following materials: Carbon oxides Sulfur oxides
Special protective equipment for fire-fighters	:	Use personal protective equipment.
Specific extinguishing methods	:	Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is

		conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. Isolate absorbed wastes contaminated with this product from other waste streams containing combustible materials (paper, wood fibers, cloth, etc.). Combustible materials exposed to this product should be rinsed immediately with large amounts of water to ensure that all product is removed. Residual product which is allowed to dry on organic materials such as rags, cloths, paper, fabrics, cotton, leather, wood, or other combustibles may spontaneously ignite and result in a fire.

Product AT USE DILUTION

Personal precautions, protective equipment and emergency procedures	:	Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling. Do not mix with bleach or other chlorinated products – will cause chlorine gas. In case of mechanical malfunction, or if in contact with unknown dilution of product, wear full Personal Protective Equipment (PPE).
Conditions for safe storage	:	Keep in a cool, well-ventilated place. Keep away from reducing agents. Keep away from strong bases. Keep away from combustible material. Keep out of reach of children. Keep container tightly closed. Store in suitable labeled containers.
Storage temperature	:	15 °C to 40 °C

Product AT USE DILUTION

Advice on safe handling	:	Wash hands thoroughly after handling. In case of mechanical malfunction, or if in contact with unknown dilution of product, wear full Personal Protective Equipment (PPE).
Conditions for safe storage	:	Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD

Ingredients with workplace control parameters

Components	CAS-No.	Form of exposure	Permissible concentration	Basis
Hydrogen peroxide	7722-84-1	TWA	1 ppm	ACGIH
		TWA	1 ppm 1.4 mg/m3	NIOSH REL
		TWA	1 ppm 1.4 mg/m3	OSHA Z1
sulphuric acid	7664-93-9	TWA (Thoracic fraction)	0.2 mg/m3	ACGIH
		TWA	1 mg/m3	NIOSH REL
		TWA	1 mg/m3	OSHA Z1

Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

Hand protection : Wear the following personal protective equipment:
Standard glove type.
Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin protection : Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing

Respiratory protection : When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

Product AT USE DILUTION

Engineering measures : Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Personal protective equipment

Eye protection : No special protective equipment required.

Hand protection : No special protective equipment required.

Skin protection : No special protective equipment required.

Respiratory protection : No personal respiratory protective equipment normally required.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	clear, yellow	yellow

Odor	:	Perfumes, fragrances	Perfumes, fragrances
pH	:	0.5 - 1.5, (100 %)	2.0 - 2.5
Flash point	:	Not applicable, Does not sustain combustion.	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	> 100 °C	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	Not applicable	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	1.025 - 1.049	
Water solubility	:	soluble	
Solubility in other solvents	:	No data available	
Partition coefficient: n-octanol/water	:	No data available	
Autoignition temperature	:	No data available	
Thermal decomposition	:	No data available	
Viscosity, kinematic	:	No data available	
Explosive properties	:	No data available	
Oxidizing properties	:	The substance or mixture is not classified as oxidizing.	
Molecular weight	:	No data available	
VOC	:	No data available	

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Reactivity	:	No dangerous reaction known under conditions of normal use.
Chemical stability	:	Contamination may result in dangerous pressure increases - closed containers may rupture.
Possibility of hazardous reactions	:	Do not mix with bleach or other chlorinated products – will cause chlorine gas.
Conditions to avoid	:	None known.
Incompatible materials	:	Bases Metals
Hazardous decomposition products	:	In case of fire hazardous decomposition products may be produced such as: Carbon oxides Sulfur oxides

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Harmful if absorbed through skin. Causes severe skin burns. May cause allergic skin reaction.
Ingestion	:	Harmful if swallowed. Causes digestive tract burns.
Inhalation	:	Toxic if inhaled. May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

Eyes	:	Causes eye irritation.
Skin	:	Health injuries are not known or expected under normal use.
Ingestion	:	Health injuries are not known or expected under normal use.
Inhalation	:	Health injuries are not known or expected under normal use.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Experience with human exposure

Product AS SOLD

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Irritation, Corrosion, Allergic reactions
Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Product AT USE DILUTION

Eye contact	:	Redness, Irritation
Skin contact	:	No symptoms known or expected.
Ingestion	:	No symptoms known or expected.
Inhalation	:	No symptoms known or expected.

Toxicity

Product AS SOLD

Product

Acute oral toxicity	:	Acute toxicity estimate : > 300 mg/kg
Acute inhalation toxicity	:	Acute toxicity estimate : 0.55 mg/l Test atmosphere: dust/mist
Acute dermal toxicity	:	Acute toxicity estimate : > 1,200 mg/kg

Respiratory or skin sensitization	:	No data available
Carcinogenicity	:	No data available
Reproductive effects	:	No data available
Germ cell mutagenicity	:	No data available
Teratogenicity	:	No data available
STOT-single exposure	:	No data available
STOT-repeated exposure	:	No data available
Aspiration toxicity	:	No data available

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD
Ecotoxicity

Environmental Effects	:	Harmful to aquatic life.

Product

Toxicity to fish	:	No data available
Toxicity to daphnia and other aquatic invertebrates	:	No data available
Toxicity to algae	:	No data available

Components

Toxicity to fish	:	dodecylbenzene sulfonic acid 96 h LC50: 4.3 mg/l Sulfuric acid 96 h LC50: 22 mg/l

Components

Toxicity to algae	:	Hydrogen peroxide 72 h EC50: 1.38 mg/l

Persistence and degradability

Product AS SOLD
Not applicable - inorganic

Product AT USE DILUTION
Not applicable - inorganic

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Product AS SOLD

Disposal methods	:	Do not contaminate ponds, waterways or ditches with chemical or used container. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.
Disposal considerations	:	Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.
RCRA - Resource Conservation and Recovery Authorization Act Hazardous waste	:	D002 (Corrosive)

Product AT USE DILUTION

Disposal methods	:	Diluted product can be flushed to sanitary sewer.
Disposal considerations	:	Dispose of in accordance with local, state, and federal regulations.

SECTION 14. TRANSPORT INFORMATION

Product AS SOLD

The shipper/consignor/sender is responsible to ensure that the packaging, labeling, and markings are in compliance with the selected mode of transport.

Land transport (DOT)

Not dangerous goods

Sea transport (IMDG/IMO)

Not dangerous goods

SECTION 15. REGULATORY INFORMATION

Product AS SOLD

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

SAFETY DATA SHEET

Xpress Detergent Disinfectant

1. PRODUCT AND COMPANY IDENTIFICATION

Product Name: Xpress Detergent Disinfectant
Product Code: A0346
Recommended Use: General cleaner and disinfectant

Company
Auto-Chlor System
746 Poplar Avenue
Memphis, TN 38105
Questions/Comments: 901-579-2300

Emergency Telephone Numbers
MEDICAL: 1-866-923-4946 (PROSAR) **SPILLS:** 1-800-424-9300 (CHEMTREC)

2. HAZARDS IDENTIFICATION

OSHA Hazard Classification

Signal Word: WARNING
Acute Toxicity: Category 4 (oral)
Acute Toxicity: Category 4 (dermal)
Eye Irritation: Category 2B

HAZARD STATEMENTS
H302: Harmful if swallowed
H312: Harmful in contact with skin
H320: Causes eye irritation

PRECAUTIONARY STATEMENTS
P264: Wash hands thoroughly after handling
P270: Do not eat, drink or smoke when using this product
P280: Wear eye protection
P301/P312: If swallowed, call a poison center or or physician if you feel unwell. rinse mouth.
P302/P352: If on skin, wash with plenty of soap and water.
P362/P364: Take off contaminated clothing and wash it before reuse.

3. COMPOSITION/INFORMATION ON INGREDIENTS

INGREDIENTS	CAS NO.	%
_Diethylene glycol monobutyl ether	112-34-5	8
Tetra sodium ethylenediamine tetra acetic acid (Na4 EDTA)	64-02-8	1.6

_Alkyl (68% C12, 32% C14) dimethyl ethylbenzyl ammonium chloride	85409-23-0	0.11
_Alkyl dimethyl benzyl ammonium chloride (C12-C18)	68391-01-5	0.11
Other components below reportable levels	141-43-5	<1.0

4. FIRST AID MEASURES

Ingestion: If swallowed, call a poison center if you feel unwell. Rinse mouth.

Skin Contact: If on skin, wash with plenty of water. If skin irritation occurs, get medical advice. Take off contaminated clothing and wash it before reuse.

Eye Contact: If in eyes, rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical advice.

5. FIREFIGHTING MEASURES

Extinguishing Media: Class A/B/C fire extinguisher, dry chemical, carbon dioxide, or foam

Specific Hazards: During fire, gases hazardous to health may be formed.

Protective Equipment: Wear full protective clothing and self-contained breathing apparatus

6. ACCIDENTAL RELEASE MEASURES

Personal Precautions: Isolate spill or leak area immediately. Adequately ventilate area.

Protective Equipment: Wear appropriate personal protective equipment as specified in Section 8.

Cleanup Procedures: Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal.

7. HANDLING AND STORAGE

Handling Precautions: Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling. Avoid prolonged exposure. Avoid release to the environment. FOR INDUSTRIAL AND INSTITUTIONAL USE ONLY.

Storage: Protect from freezing. Keep tightly closed in a dry, cool and well ventilated place.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Occupational Exposure Limits: No occupational exposure limits established for this product.

Appropriate Engineering Controls: Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment

Eye Protection: Wear protective glasses, goggles or eye shield.

Skin Protection: Wear protective gloves.

Respiratory Protection: In case of insufficient ventilation, wear suitable respiratory equipment.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance:
liquid

Odor:
Citrus

pH:
11.7

Specific Gravity:
No information available

Solubility:
Soluble in water

Flash Point:
> 93.9C

Boiling Point:
No information available

VOC:
No information available

Melting/Freezing Point:
No information available

Flammability:
No information available

10.STABILITY AND REACTIVITY

Stability: Stable under normal conditions

Hazardous Polymerization: Will not occur

Incompatibility: Strong acids, alkalies, and oxidizing agents.

Hazardous Decomposition Products: Oxides of nitrogen ammonia, carbon dioxide, carbon Monoxide, and other low molecular weight hydrocarbons

11.TOXICOLOGY INFORMATION

Likely Routes of Exposure: Inhalation, eye and skin contact

Acute Symptoms

Eye and Skin Contact: Causes eye irritation and causes mild skin irritation.

Ingestion: Expected to be a low ingestion hazard.

Inhalation: Prolonged inhalation may be harmful.

Chronic Effects: None known

Assessment of acute toxicity:

Oral LD_{50}	Dermal LD_{50}	Inhalation LC_{50}
>5 g/kg	>5 g/kg	2.43 mg/l

12.ECOLOGICAL INFORMATION

Toxic to aquatic life. Harmul to aquatic life with long lasting effects. Expected to be readily biodegradable.

13.DISPOSAL CONSIDERATIONS

Pesticide wastes are acutely hazardous. Improper disposal of all excess pesticide spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label directions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representatives at the nearest EPA Regional Office for guidance.

14.TRANSPORT INFORMATION

UN Number: Not classified
Proper Shipping Name: Not classified
Hazard Class: Not classified
Packing Group: Not classified

15.REGULATORY INFORMATION

This chemical is a pesticide product registered by the Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law. These requirements differ from the classification criteria and hazard information required for safety data sheets, and for workplace labels of non-pesticide chemicals. The pesticide label also includes other important information, including directions for use, pesticide storage and container handling.

EPA REGISTRATION NUMBER: 1839-83-6243

16.OTHER INFORMATION

Revision Date: 03/05/2020
Supersedes: new
Reason for Revision: New formulation

Notice to Reader: This document has been prepared using data from sources considered technically reliable. It does not constitute a warranty, express or implied, as to the accuracy of the information contained within. Actual conditions of use and handling are beyond seller's control. User is

responsible to evaluate all available information when using product for any particular use and to comply with all Federal, State, Provincial and Local laws and regulations.

Washington, DC 20009

Prepared by
Potomac-Hudson Engineering, Inc.
77 Upper Rock Circle, Suite 302, Rockville, MD, 20850

GSA Contract No. 7QRAA18D0074
Task Order No. CW82753

INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of the protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can help prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors.

PHE provided a draft protocol to DC DOC on June 15, 2020 and conducted initial on-site observational inspections to verify compliance with the protocol on June 29 and July 1, 2020. Following these observational inspections, the disinfection protocol was revised and a report was provided to DC DOC summarizing the inspections and recommending a number of corrective actions to improve work practices and procedures. A follow up observational inspection was conducted on July 20, 2020 to verify implementation of the corrective action recommendations by the contractors who are conducting the disinfection.

AUDIT OVERVIEW

SCOPE

PHE Industrial Hygienist Gary Morris conducted the follow up inspection of the DC DOC Central Detention Facility (CDF) and the Correctional Treatment Facility (CTF). This report contains observations from these follow up inspections, deviations deficiencies and from prescribed work practices and procedures, and corrective action recommendations. An In-Brief Meeting was held prior to the inspections and was attended by DC DOC representatives Gloria Robertson and Rena Myles. At the conclusion of the inspections, an Out-Brief Meeting was held that was attended by Ms. Robertson, Ms. Myles, and Gitana Stewart-Ponder to summarize observations, deficiencies, and corrective action recommendations from the follow up inspection.

Sanitizing and disinfection of the CDF is being conducted by Rock Solid Rock Solid District Group, LLC and by Spectrum Management, LLC in the CTF.

SUMMARY OF FINDINGS

Tables 1A (CDF) and 1B (CTF) contain summaries of the findings from the initial oversight inspections, the recommended corrective action contained in the initial report, the status of each corrective action, and additional corrective action. Positive observations from the follow up inspection consist of the following:

- Some of the Spectrum Management, LLC staff did not wring out the rags after dipping in the bucket, increasing adequate coverage and contact time of surfaces (the rags were visibly soaked with the disinfectant).
- Spectrum Management, LLC staff carried the dip buckets and mop buckets with them to the areas in which they were disinfecting, increasing the frequency of re-wetting of the rags and mops.
- Spectrum Management, LLC staff periodically refilled the wipe buckets with the disinfectant.

It is recommended that these work practices be implemented by Rock Solid District Group, LLC in the CTF.

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*). In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant.	It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces can then be wiped dry with a dry rag or are allowed to air-dry, as appropriate in a given area.	The majority of contractor employees were still using spray application as opposed to wet wiping. Spray application was observed used on telephones, tables, and benches in one of the housing blocks. Also, the employees who were wet wiping were not returning to the cart to re-wet their rags at such a frequency to ensure the 45 second contact time on all of the surfaces treated. We also noted that surface drying in the housing units was faster due to the existence of wall and floor fans in the hallways (to help with conditioning the space).	Replace all spray application with wet wiping. Periodically remind contractor staff that the objective of their work is to disinfect surfaces as opposed to cleaning the surfaces, reinforcing the required 45 second contact time, with additional attention to the housing units due to the faster surface drying facilitated by the wall and floor fans. Instruct crew staff to liberally wet the rags and avoid wringing them out and to take the bucket with them to enable frequent re-wetting without returning to the cart. Ensure that all applicable items are disinfected (the exercise machine in the South 3 Housing Unit was not disinfected).

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
The contractor did not consistently allow for adequate wetting of the floor during mopping. On several occasions it was observed that a wet mop was used for an overly extensive period of time before being re-wetted. This resulted in portions of the floor being inadequately damped with a sufficient amount of disinfectant to ensure a 45 second contact time.	Ensure that mops are frequently wetted in the mop bucket during floor mopping. Consider requiring the contractor to provide additional mop buckets and dollies so that each person mopping has access to their own dolly that can be toted along with them as they mop. Based on site observations, there was an insufficient number of mop dollies. This required the dollies to remain in a centralized position and discouraged floor cleaners from more frequently wetting their mop heads. Additionally, the mop buckets themselves, which have their own sets of wheels on them, should be removed from the dollies and transported with those mopping the floors.	Observations of floor mopping indicated that the 45 second contact time was achieved.	As noted above, the existence of wall and floor fans in the housing units facilitates faster drying of surfaces, including floors in these areas. As an added measure, periodically remind contractor staff that additional attention is needed to ensure the 45 second contact time (i.e. periodically return the mop to the bucket to re-wet the mop) in the housing units. Removing the mop buckets from the carts will facilitate more frequent we-wetting of the mop heads.
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.	The contractor was not observed disinfecting walls.	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.	DC DOC has not been able to procure the dust mops through their supplier and is investigating additional suppliers. Work practices using the brooms in such a manner to minimize dispersion of accumulated dust were observed.	Continue attempts to procure the dust mops.
Currently, the cleaning contractor is only responsible for disinfecting the floor and doorknobs/door handles in the basement. Although DOC staff are responsible for the remaining areas, it is unclear if they know all the surfaces they need to clean and/or if they are aware of the proper contact time for the disinfectant.	Ensure that staff cleaning personnel are familiar with and are properly implementing the cleaning protocols currently being provided to the third-party contractors.	DOC staff has been informed of the surfaces to be addressed and the importance of the 45 second contact time.	No additional action is required.
The contractor was observed cleaning windows, mirrors, and other glass surfaces with an ammonium-based window cleaner (Ecolab Oasis 255SF Industrial Window Cleaner) as opposed to an EPA registered product.	Test the hydrogen peroxide-based disinfectant on glass surfaces. If acceptable, consider using the disinfectant on these surfaces instead of, or in addition to, traditional window cleaning chemicals.	The hydrogen peroxide-based disinfectant was used on all surfaces. Other products were not observed on the carts.	No additional action is required.

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
In some cases, contractor personnel were observed cleaning doorknobs, door handles, and other frequently-touched surfaces with a hand sanitizer. While this is technically sufficient for disinfection, it is not be applied consistently in all areas and the proper contact time may or may not be properly implemented.	Ensure that all chemicals and cleaning procedures are consistently applied throughout the facility. If hand sanitizer is to be used on a regular basis for these surfaces, they should be documented in the cleaning protocol.	The hydrogen peroxide-based disinfectant was used on all surfaces. Other products were not observed on the carts.	No additional action is required.
The contractor (Summit) that currently provides food service duties in the cafeteria is solely responsible for cleaning and disinfecting that area of the facility. It is not known if they are aware of or are following the proper protocols for disinfection in a manner consistent with the other areas of the facility.	Ensure that Summit is performing proper disinfection in a manner that is consistent with or exceeds the procedures being used elsewhere at the facility.	DC DOC has discussed appropriate disinfection practices with Summit (surfaces are disinfected three times per day).	No additional action is required.

TABLE 1B. FINDINGS FOR DC DOC CORRECTIONAL TREATMENT FACILITY			
RECOMMENDED CORRECTIVE ACTION	**RECOMMENDED CORRECTIVE ACTION**	**RECOMMENDED CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CORRECTIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT			
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*) being used. In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant.	Sufficiently spraying to adequately wet and entire surface such as a table or wall is extremely difficult and time-consuming. It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces should then be wiped dry with a dry rag or be allowed to air-dry, as appropriate in a given area. This will further ensure that the entire surface is adequately wetted for the duration of the required contact time.	Spraying and wiping of surfaces has been replaced with wet wiping. The 45 second contact time was achieved on all surfaces observed, including walls.	No additional action is required.
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.	Observations during the follow up inspection indicated that appropriate surfaces, including walls were effectively being disinfected.	No additional action is required.

TABLE 1B. FINDINGS FOR DC DOC CORRECTIONAL TREATMENT FACILITY			
RECOMMENDED CORRECTIVE ACTION	**RECOMMENDED CORRECTIVE ACTION**	**RECOMMENDED CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CORRECTIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT			
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure that the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.	DC DOC has not been able to procure the dust mops through their supplier and is investigating additional suppliers. Work practices using the brooms in such a manner to minimize dispersion of accumulated dust were observed.	Continue attempts to procure the dust mops.
The contractor was not always performing its duties in a consistent manner. The following observations were made: • Some of the grated stairwells in the housing areas were mopped, while others were not. • In one area, contractor personnel were using hand sanitizer to disinfect doorknobs, door handles, and phones. However, in other areas, the peroxide disinfectant was used. • In the 96 Medical Area, the contractor did not clean the area between the gates and the elevators. However, this area was cleaned in the 82 Medical Area.	The following recommendations are made: • Ensure that all stairwells in the housing units are mopped. • Since different disinfectants require different contact times (depending on the active ingredients), ensure that the contractor is consistent in what they use. The contact time for ethanol (5 minutes) is much greater than that for peroxide (45 seconds). • Ensure that the contractor is clear on what areas are considered within their scope of work and which areas are not and ensure that they clean and disinfect all of the areas for which they are responsible.	All applicable surfaces were addressed in the areas observed. The hydrogen peroxide-based disinfectant was used on all surfaces. Other products were not observed on the carts.	No additional action is required.

TABLE 1B. FINDINGS FOR DC DOC CORRECTIONAL TREATMENT FACILITY			
RECOMMENDED CORRECTIVE ACTION	**RECOMMENDED CORRECTIVE ACTION**	**RECOMMENDED CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CORRECTIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT			
The contractor was observed mixing and handling both the concentrated form of the peroxide disinfectant as well as the diluted form. In its concentrated form, the disinfectant has a pH of less than 2 and is extremely corrosive. Even in its diluted form, the disinfectant is still corrosive and presents danger to users. Contractor personnel were not wearing certain personal protective equipment (PPE) while performing these tasks. The contractor was also observed using the fogging unit without eye protection.	It is recommended that the personnel handling and mixing the disinfectant in the mixing room wear goggles and/or face shield to protect their eyes and face. Consider also requiring longer gloves that cover exposed skin between hands and sleeves. Consider requiring the contractor to where eye protection during fogging.	Appropriate personal protective equipment was worn during mixing and transfers of the disinfectant. Fogging was not conducted on the day of the follow-up inspection.	No additional action is required on the part of Spectrum Management. PHE will attempt to observe fogging during the next oversight inspection.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

PERIODIC RE-INSPECTIONS

As part of the existing scope of work, PHE is scheduled to conduct up two (2) follow up monthly site inspections to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected. As part of these follow-up inspections, PHE will hold a short, informal out-brief at the end of each day to discuss any findings or other observations made, and present options for correction.

PHE also recommends that DOC personnel perform additional inspections, as needed, based on the results of the PHE follow-up inspections, if deficiencies continue to be identified.

EFFECTIVENESS EVALUATION

The DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future. The DOC will also continue to perform voluntary testing of individuals onsite (both employees and inmates) every two weeks. As the year continues on, it is likely that additional waves or peaks may be observed throughout the region. DOC should closely monitor the number of persons onsite testing positive during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel from the virus.

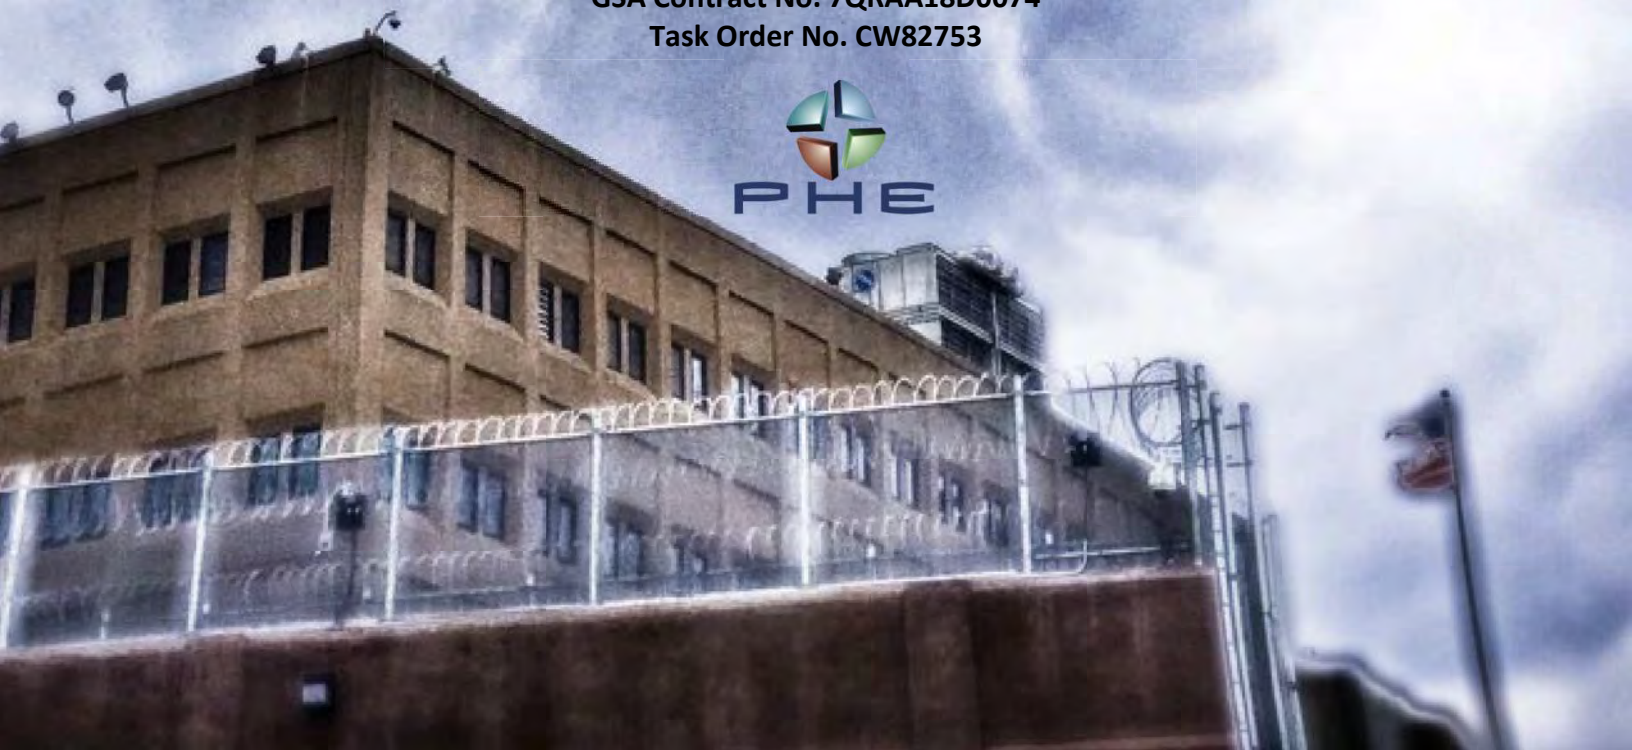
Rockville, MD, 20850

GSA Contract No. 7QRAA18D0074
Task Order No. CW82753



INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of the protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can help prevent the spread of disease to DC DOC inmates, staff, and visitors.

PHE provided a draft protocol to DC DOC on June 15, 2020 and conducted initial on-site observational inspections to verify compliance with the protocol on June 29 and July 1, 2020. Following these observational inspections, the disinfection protocol was revised, and a report was provided to DC DOC summarizing the inspections and recommending a number of corrective actions to improve work practices and procedures. An initial follow-up observational inspection was conducted on July 20, 2020 to verify implementation of the corrective action recommendations by the contractors who are conducting the disinfection, and a follow-up report was issued on July 23, 2020.

On September 28, 2020, PHE conducted a second follow-up site visit to inspect the cleaning and disinfection process. This document provides a summary of PHE's observations, findings, and recommendations.

AUDIT OVERVIEW

SCOPE

Christopher Rua, CHMM and Gary Morris, CIH of PHE conducted the follow-up inspection of the DC DOC Central Detention Facility (CDF) and the Correctional Treatment Facility (CTF) on September 28, 2020. This report contains observations from this follow-up inspection, deficiencies and deviations from prescribed work practices and procedures, and corrective action recommendations. At the conclusion of the inspection, an Out-Brief Meeting was held to summarize observations, deficiencies, and corrective action recommendations from the follow up inspection. This meeting was attended by:

- Mr. Lennard Johnson, Warden (DOC)
- Ms. Kathy Landerkin, Deputy Warden (DOC)
- Ms. Jackie Smith, Site Safety Officer (DOC)
- Ms. Gloria Roberts, Compliance and Review Officer (DOC)
- Ms. Michele Jones, CTF Programs (DOC)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

Sanitizing and disinfection of the CDF is being conducted by G-SIDA General Services, LLC (G-SIDA) and by Spectrum Management, LLC (Spectrum) in the CTF. It should be noted that G-SIDA replaced Rock Solid Management Group, LLC as the contractor at the CDF on August 5, 2020. This was PHE's first observation of this contractor.

SUMMARY OF FINDINGS

Table 1 contains a summary of the findings from this oversight inspection as well as the recommended corrective action contained. Positive observations from the follow-up inspection consist of the following:

- Some of the staff of both contractors did not wring out the rags after dipping in the bucket, increasing adequate coverage and contact time of surfaces (the rags were visibly soaked with the disinfectant).
- Staff of both contractors carried the dip buckets and mop buckets with them to the areas in which they were disinfecting, increasing the frequency of re-wetting of the rags and mops.
- Contractor staff periodically refilled the wipe buckets with the disinfectant and changed mop water and mop heads several times throughout the day.
- Fans positioned in the housing blocks are now turned off during sanitizing to help extend contact time.
- Mop and rag buckets are filled by DOC staff to ensure consistent filling practices. Bleach solutions are also mixed by DOC staff and filled in spray bottles to ensure proper bleach/water ratios in the spray bottles.
- Spectrum crew wet wiped surfaces in the CTF Visitor's Entrance with the sanitizing solution and when dry, applied the solution a second time via a spray bottle and allowed the solution to air dry.

In general, significant improvement was observed during this site visit compared to previous site visits.

TABLE 1. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY AND CONDITIONAL TREATMENT FACILITY	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*). Some contractor employees were not re-wetting their rags with sufficient frequency. As a result, some walls and other surfaces did not stay wetted for a full 45 seconds. This was particularly noted for the gates in the common areas near the elevators due to the intricate design and abundant surface area.	Periodically remind contractor staff that the objective of their work is to disinfect surfaces as opposed to cleaning the surfaces, reinforcing the required 45-second contact time. Instruct crew staff to liberally wet the rags and avoid wringing them out. Consider instructing the crews to have a brief onsite meeting at the beginning of each day to discuss these practices to reinforce the instructions. In the common areas, consider using the pump sprayer to thoroughly wet the gates. The sprayer will be able to coat the entirety of the surfaces more completely and efficiently than hand wiping.
The contractor continues to dry sweep all floors prior to disinfection in contradiction to the cleaning protocols, due to the limited availability of acceptable (i.e. plastic as opposed to metal) dusting brooms. Since dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents, every attempt should be made to sweep in a slow, smooth motion. The contractors were observed to be sweeping in a rapid manner in several area.	It has been recommended that the facility procure dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. However, DC DOC has not yet been able to procure the dust mops through their supplier and is investigating additional suppliers. Continue attempts to procure the dust mops. Until the dusting brooms are procured, ensure the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.
In some cases, contractor personnel were observed cleaning the surfaces of phones and other electronic devices (e.g., computer screens, keyboards) with a hand sanitizer. While this is technically sufficient for disinfection, the proper contact time may or may not be properly achieved. Disinfectants with ethyl alcohol as the active ingredient, such as hand sanitizer, require a minimum contact time ranging from 30 seconds up to 10 minutes, depending on the specific product and concentration.	The U.S. Environmental Protection Agency (USEPA) has compiled a list of disinfectants (List N) approved for effective use for COVID-19. The list is arranged by USEPA Registration Number, product name, manufacturer, active ingredient, and other criteria. Each product included on List N is denoted with the minimum contact time required to be effective against COVID-19. The list can be found here: https://cfpub.epa.gov/giwiz/disinfectants/index.cfm. If hand sanitizer is to be used on a regular basis for these surfaces, the product should be cross-checked against this list to determine if the product is approved and identify the proper contact time. Alternatively, if safe to use on phones and other electronic devices, consider using the *Ecolab Peroxide Multi Surface Cleaner and Disinfectant* on these surfaces for consistency.

TABLE 1. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY AND CONDITIONAL TREATMENT FACILITY	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
In general, both contractors use dedicated sets of mops for bathrooms and locker rooms which are separate from the mops they use in offices and common areas. However, in area C3-112 at the CTF, **Spectrum** personnel were observed using the same mop for two offices and a small hallway that was also used for a single-stall bathroom in that area. It appears that the contractors did not know a bathroom was located in this area and therefore only brought one set of mops with them to this location.	Ensure at all times that mops used for bathrooms and locker rooms are not used in administrative and common areas.
Fogging is not being conducted by **G-SIDA** in the CDF due to the omission of this in the current contract.	As planned, include fogging in the next G-SIDA contract.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

PERIODIC RE-INSPECTIONS

As part of the existing scope of work, PHE is scheduled to conduct one additional follow-up site inspection to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected. As part of the follow-up inspection, PHE will hold a short, informal out-brief at the end of each day to discuss any findings or other observations made and present options for correction.

PHE also recommends that DC DOC personnel perform additional inspections, as needed, based on the results of the PHE follow-up inspections, if deficiencies continue to be identified.

EFFECTIVENESS EVALUATION

The DC DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future. The DC DOC will also continue to perform voluntary testing of individuals onsite (both employees and inmates) every two weeks. As the year continues on, it is likely that additional waves or peaks in the number of virus cases may be observed throughout the region. DC DOC should closely monitor the number of persons onsite testing positive for COVID-19 during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel (employees, inmates, contractors, and visitors) from the virus.

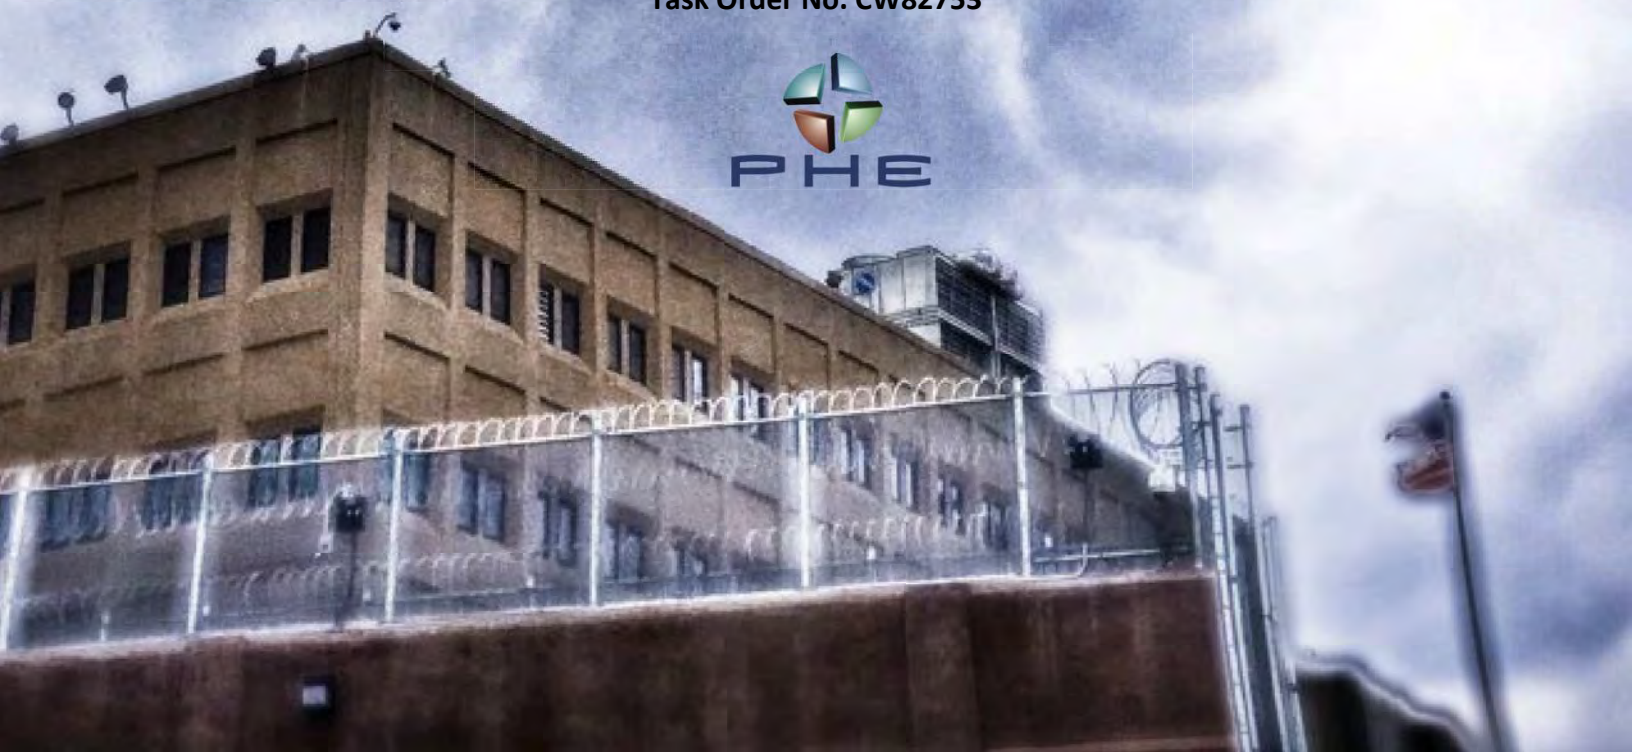
GSA Contract No. 7QRAA18D0074
Task Order No. CW82753



INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of the protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can help prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors.

PHE provided a draft protocol to DC DOC on June 15, 2020 and conducted initial on-site observational inspections to verify compliance with the protocol on June 29 and July 1, 2020. Following these observational inspections, the disinfection protocol was revised, and a report was provided to DC DOC summarizing the inspections and recommending a number of corrective actions to improve work practices and procedures. An initial follow up observational inspection was conducted on July 20, 2020 to verify implementation of the corrective action recommendations by the contractors who are conducting the disinfection, and a follow-up report was issued on July 23, 2020. A subsequent inspection was performed on September 28, 2020 and reported on October 2, 2020.

PHE conducted a final follow-up site visit on October 23, 2020 to observe disinfection practices of the two contractors who disinfecting surfaces in the two DOC buildings. This document provides a summary of PHE's observations, findings, and recommendations.

AUDIT OVERVIEW

SCOPE

Gary Morris, CIH of PHE conducted the follow up inspection of the DC DOC Central Detention Facility (CDF) and the Correctional Treatment Facility (CTF) on October 23, 2020. This report contains observations from these follow up inspections, deviations deficiencies and from prescribed work practices and procedures, and corrective action recommendations. At the conclusion of the inspections, an Out-Brief Meeting was held to summarize observations, deficiencies, and corrective action recommendations from the follow up inspection. This meeting was attended by:

- Jackie Smith, Site Safety Officer (DOC)
- Rena Myles
- Gary Morris (PHE)

Sanitizing and disinfection of the CDF is being conducted by G-SIDA General Services, LLC (G-SIDA) and by Spectrum Management, LLC (Spectrum) in the CTF. During the October 23, 2020 inspection, observations were made in the CDF during disinfection of SW-2, SO-2, and the South 2 Lobby and in the Staff Entrance of the CTF.

SUMMARY OF FINDINGS

Tables 1 contains a summary of the findings from this oversight inspection as well as the recommended corrective action contained. Positive observations from the follow up inspection consist of the following:

- Some of the staff of both contractors did not wring out the rags after dipping in the bucket, increasing adequate coverage and contact time of surfaces (the rags were visibly soaked with the disinfectant).
- Staff of both contractors carried the dip buckets and mop buckets with them to the areas in which they were disinfecting, increasing the frequency of re-wetting of the rags and mops.
- Contractor staff periodically refilled the wipe buckets with the disinfectant, and change mop water and mop heads during observation period.
- The 45 second contact time was achieved on all surfaces disinfected by the CTF contractor (Spectrum Management) during observation of disinfection in the Staff Entrance, including chairs, the floor, lockers, tables, doors, windows, window frames, and door handles.
- The 45 second contact time was achieved on surfaces disinfected by the CDF contractor, excluding phone handsets in the SO-2 housing block and the metal gates in the South 2 Lobby.

In general, significant improvement was observed during this site visit compared to previous site visits.

TABLE 1. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY AND CONDITIONAL TREATMENT FACILITY	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The 45 second contact time was not achieved by the CDF contractor on the metal partition gates in the South 2 Elevator Lobby. One employee was observed cleaning with a hand towel for about 10 minutes without re-wetting the towel.	Remind contractor staff at the beginning of each day to ensure that the 45 second contact time is achieved on all surfaces. Instruct crew staff to liberally wet the rags and avoid wringing them out. Consider using the pump sprayer to thoroughly wet the gates in the elevator lobbies. The sprayer will be able to coat the entirety of the surfaces more efficiently than hand wiping.
Both contractors continue to dry sweep the floors with standard brooms prior to disinfection (in contradiction to the cleaning protocol). Dry sweeping may result in the re-suspension of viral particles that have collected on the floor, increasing contact and inhalation risk. In general, contractor staff was observed using the wide floor brooms with a slow and short sweeping motion, while those using standard brooms (to sweep under furniture and in corners) employed a longer and more forceful sweeping motion.	Continue attempting to procure dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. Until the dusting brooms are procured, instruct contractor staff to use a smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.
G-SIDA employees were observed cleaning phones with a hand sanitizer spray. While this is technically sufficient for disinfection, the proper contact time may or may not be achieved, as disinfectants with ethyl alcohol as the active ingredient (such as hand sanitizer) require a minimum contact time ranging from 30 seconds to 10 minutes, depending on the specific product and concentration. Long contact time with hand sanitizer spray is difficult to achieve, as the alcohol dries faster than other disinfectants.	Disinfect phone handsets and key pads with the *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

PERIODIC RE-INSPECTIONS

This report represents the final follow up site inspection by PHE under the existing contract. PHE recommends that DOC personnel perform additional inspections, as needed, to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected.

EFFECTIVENESS EVALUATION

The DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future and perform voluntary testing of individuals onsite (both employees and inmates). As the year continues on, it is likely that additional waves or peaks may be observed throughout the region. DOC should closely monitor the number of persons onsite testing positive during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel from the virus.

X	D. Other (Specify type of modification and authority) **Contract DCAM-20-NC-EM-0079C and Title 27 DCMR Sections 4727**

E. IMPORTANT: Contractor [ ] is not, [X] is required to sign this document and return 1 copy to the issuing office.

14. Description of modification (Organized by UCF Section headings, including solicitation/contract subject matter where feasible.)

Contract No. **DCAM-20-NC-EM-0079C** *Comprehensive Hazardous Materials ("HAZMAT") Environmental Cleaning Services related to the SARS-CoV-2 (COVID-19) Coronavirus-19 Pandemic for the Department of Corrections* is hereby modified as follows:

1. As a result of, and pursuant to, D.C. Code § 7–2304. Issuance of emergency executive order; contents; actions of Mayor in response to the World Health Organization's ("WHO") declaration of the imminent threat and spread of SARS-CoV-2 (COVID-19) Coronavirus-19 as a world-wide Pandemic, the Department hereby issues this Modification No. 03 extending services for a period of three (3) month beginning on December 1, 2020 and ending February 28, 2021.

2. As a result of Item No. 01, of this Modification No. 03 for Comprehensive Hazardous Materials ("HAZMAT") Environmental Cleaning Services related to the SARS-CoV-2 (COVID-19) Coronavirus-19 Pandemic for the Department of Corrections, Basic Services are hereby increased from $1,007,274.72 by $755,456.04 to $1,787,730.76.

3. **CONTRACT RECAP** Basic Services shall not exceed $1,649,477.69 and Cost Reimbursement Services shall not exceed $25,000.00. ***The Total Not-To-Exceed* Value for Emergency Contract is $1,787,730.76.**

4. The continuation of services beyond February 28, 2021 is subject to the availability of FY21 Appropriated budgets and extension of the emergency executive order D.C. Code § 7–2304.

5. All other Terms and Conditions of Contract DCAM-20-NC-EM-0079C remain unchanged.

6. **RELEASE:** It is mutually agreed that in exchange for this Modification and other consideration, the Contractor hereby releases, waives, settles, and holds the Department harmless from any and all actual or potential claims or demands for delays, disruptions, additional work, additional time, additional costs, contract extensions, compensation, or liability under any theory, whether known or unknown, that the Contractor may have now or in the future against the Department arising from or out of, as a consequences or result of, relating to or in any manner connected with this Modification, the above-referenced Services, and the work provided pursuant to the Agreement.

Except as provided herein, all terms and conditions of the document referenced in Item (9A or 10A) remain unchanged and in full force and effect

Subject: RE: DOC Cleaning Contracts Renewal

Good morning Gitana. As discussed we will extend the Contract to **February 2021** and will work with our Budget Team to ensure funding is secured to ensure compliance with the Court Order.
Kim, let's extend both contracts to February 2021 and work with our team for incremental funding.
We should review in January to ensure that Court Order is sll v alid and if so we may need to prepare a compev e solicitaon in Januar y if we must connue the c ontract beyond February 2021.
Thanks all.

General Job Information

JOB SUMMARY

This position is located in the Department of Corrections (DOC), Office of Accreditation and Compliance located inside the Central Detention Facility (CDF), and Correctional Treatment Facility (CTF). The operational focus is on supporting activities related to staffs, inmates, and visitors' health and well-being.

The Environmental Safety and Sanitation Inspection Specialist (ESS) provides environmental safety and sanitation oversight for the CDF and CTF and ensures that the housing units common areas are clean, sanitary and environmentally safe, and the facilities and equipment are maintained in good working order/condition as well as the laundry operations, barber and cosmetology, and commissary areas.

DUTIES AND RESPONSIBILITIES

Plans, designs, develops and coordinates correctional environmental safety and sanitation initiatives; and serves in a key supporting role for the implementation of departmental initiatives focusing on core correctional needs and support requirements as it relates to environmental safety and sanitation of the CDF and CTF. Incumbent ensures day-to-day oversight for compliance with applicable regulations, codes and standards relevant to the mission and goals; oversees and coordinates inspections conducted by the DC Department of Health (DOH) and conducts comprehensive and thorough inspections to ensure that the facilities are compliant. Maintains a manual and automated reporting system to keep up to date with inspection schedules and cleaning squads/crews; and coordinates with department managers, supervisors, officers, and employees regarding the cleaning and inspection schedules

Provides instructions and guidelines to detail squads; replenishes/orders supplies and tools for cleaning purposes, and documents whether the operation is compliant with prevention, identification and abatement activities. Addresses departmental issues and key initiatives; and assists in the development of funding and resource proposals to support program initiatives.

Recommends revisions to internal policies and interfaces with key officials within the Department, with other Federal and District Government agencies and the private sector in the course of working out administrative systems and procedures that are inherent in attaining the goals.

Oversees and assesses the inspections of all facility areas e.g., weekly/monthly/annually; collaborates with supervisors and managers to designate employees to conduct regular internal inspections to identify and document deficiencies.

Oversees sanitation supplies are available for distribution; and are distributed to the units based on an approved schedule. Collaborates with correctional officers and supervisors to ensure cleaning equipment is utilized in the proper manner and makes inspections a part of their daily tasks.

Makes rounds with designated staff. Rounds shall include inspections of showers, dayrooms, on-unit classrooms and recreation areas, chase closets and storage area supply closets, tiers, and the control bubble. Inspections require each program manager or designee to be present when the ESS performs inspections of areas such as the medical unit, the warehouse, storage rooms, shops, commissary, food services, etc.

Collaborates with the Facilities Maintenance manager regarding repairs, based on schedule, visits housing units to

Collaborates with the Facilities Maintenance manager regarding repairs, based on schedule, visits housing units to conduct a general visual inspection for cleanliness and ensures that adequate cleaning supplies are available and equipment and fixtures are operational in common areas. Reviews inspection reports of cells and ensures cells are free from graffiti and peeling paint. Managers affected by this report are responsible for preparing a closed out Corrective Action Plan (CAP) to the ESS and appropriate DOC manager official. The ESS follows up on the CAP to ensure adequate corrective action is taken in a timely manner.

Evaluates performance management for operational efficiency and support services for effectiveness; and participates in scheduled or random audit reviews of internal programs offices. Evaluates and documents results of each program audit; and prescribes corrective action or remediation in difficult and complex work assignment

Makes sure cellblock control modules, administrative areas, office areas, medical unit, Inmate Reception Center (IRC), and other areas are thoroughly cleaned; and coordinates with maintenance staff for cleaning air vents, windows and high walls.

Maintains documentation relevant to DOH inspections, corrective action plans and abatement schedules and determines the frequency of required treatments. Keeps in contact with the DC Departments of Health, Occupational Safety and Health Administration, DC Fire and Emergency Management and other independent consultants.

QUALIFICATIONS AND EDUCATION

Applicants must have at least one (1) year of specialized experience. Specialized experience is experience which is in or directly related to the line of work of the position and has equipped the applicant with the particular knowledge, skills and abilities to successfully perform the duties of the position.

LICENSE AND CERTIFICATION

None

WORKING CONDITIONS

Work is performed both in an office and correctional institutional facility environment.

OTHER SIGNIFICANT FACTS

Tour of Duty: 7:30 a.m. - 4:30 p.m. Must be flexible to varying work hours.

Collective Bargaining: This position is not in Collective Bargaining

Duration of Appointment: Career Service Appointment

Position Designation: The incumbent of this position will be subject to enhanced suitability screening pursuant to Chapter 4 of the DC Personnel Regulations Suitability-Safety Sensitive. This position requires a background check and drug screening; therefore, you may be required to provide information about your criminal history and pass a drug screening in order to be appointed to this position. A TB Test will be required prior to entry on duty.

If the position you are applying for is in the Career, Management Supervisor, or Educational Service at an annual salary of one hundred fifty thousand dollars ($150,000) or more, you must establish residency in the District of Columbia within one hundred eighty (180) days of the effective date of the appointment and continue to maintain residency within the District of Columbia throughout the duration of appointment.

EEO Statement

The District of Columbia Government is an Equal Opportunity Employer. All qualified candidates will receive consideration without regard to race, color religion, national orgin, sex, age, marital status, personal appearance, sexual orientation, family responsibilities, matriculation, physical handicap, or political affiliation.

General Job Information

JOB SUMMARY

This position is located in the Department of Corrections (DOC), Office of Accreditation and Compliance located inside the Central Detention Facility (CDF), and Correctional Treatment Facility (CTF). The operational focus is on supporting activities related to staffs, inmates, and visitors' health and well-being.

The Environmental Safety and Sanitation Inspection Specialist (ESS) provides environmental safety and sanitation oversight for the CDF and CTF and ensures that the housing units common areas are clean, sanitary and environmentally safe, and the facilities and equipment are maintained in good working order/condition as well as the laundry operations, barber and cosmetology, and commissary areas.

DUTIES AND RESPONSIBILITIES

Plans, designs, develops and coordinates correctional environmental safety and sanitation initiatives; and serves in a key supporting role for the implementation of departmental initiatives focusing on core correctional needs and support requirements as it relates to environmental safety and sanitation of the CDF and CTF. Incumbent ensures day-to-day oversight for compliance with applicable regulations, codes and standards relevant to the mission and goals; oversees and coordinates inspections conducted by the DC Department of Health (DOH) and conducts comprehensive and thorough inspections to ensure that the facilities are compliant. Maintains a manual and automated reporting system to keep up to date with inspection schedules and cleaning squads/crews; and coordinates with department managers, supervisors, officers, and employees regarding the cleaning and inspection schedules

Provides instructions and guidelines to detail squads; replenishes/orders supplies and tools for cleaning purposes, and documents whether the operation is compliant with prevention, identification and abatement activities. Addresses departmental issues and key initiatives; and assists in the development of funding and resource proposals to support program initiatives.

Recommends revisions to internal policies and interfaces with key officials within the Department, with other Federal and District Government agencies and the private sector in the course of working out administrative systems and procedures that are inherent in attaining the goals.

Oversees and assesses the inspections of all facility areas e.g., weekly/monthly/annually; collaborates with supervisors and managers to designate employees to conduct regular internal inspections to identify and document deficiencies.

Oversees sanitation supplies are available for distribution; and are distributed to the units based on an approved schedule. Collaborates with correctional officers and supervisors to ensure cleaning equipment is utilized in the proper manner and makes inspections a part of their daily tasks.

Makes rounds with designated staff. Rounds shall include inspections of showers, dayrooms, on-unit classrooms and recreation areas, chase closets and storage area supply closets, tiers, and the control bubble. Inspections require each program manager or designee to be present when the ESS performs inspections of areas such as the medical unit, the warehouse, storage rooms, shops, commissary, food services, etc.

Collaborates with the Facilities Maintenance manager regarding repairs, based on schedule, visits housing units to

Collaborates with the Facilities Maintenance manager regarding repairs, based on schedule, visits housing units to conduct a general visual inspection for cleanliness and ensures that adequate cleaning supplies are available and equipment and fixtures are operational in common areas. Reviews inspection reports of cells and ensures cells are free from graffiti and peeling paint. Managers affected by this report are responsible for preparing a closed out Corrective Action Plan (CAP) to the ESS and appropriate DOC manager official. The ESS follows up on the CAP to ensure adequate corrective action is taken in a timely manner.

Evaluates performance management for operational efficiency and support services for effectiveness; and participates in scheduled or random audit reviews of internal programs offices. Evaluates and documents results of each program audit; and prescribes corrective action or remediation in difficult and complex work assignment

Makes sure cellblock control modules, administrative areas, office areas, medical unit, Inmate Reception Center (IRC), and other areas are thoroughly cleaned; and coordinates with maintenance staff for cleaning air vents, windows and high walls.

Maintains documentation relevant to DOH inspections, corrective action plans and abatement schedules and determines the frequency of required treatments. Keeps in contact with the DC Departments of Health, Occupational Safety and Health Administration, DC Fire and Emergency Management and other independent consultants. Must have experience working in a correctional facility.

QUALIFICATIONS AND EDUCATION

Applicants must have at least one (1) year of specialized experience equivalent to the next lower grade level. Specialized experience is experience which is in or directly related to the line of work of the position and has equipped the applicant with the particular knowledge, skills and abilities to successfully perform the duties of the position.

LICENSE AND CERTIFICATION

None

WORKING CONDITIONS

Work is performed both in an office and correctional institutional facility environment.

OTHER SIGNIFICANT FACTS

Tour of Duty: 7:30 a.m. - 4:30 p.m. Must be flexible to varying work hours.

Collective Bargaining: This position is not in Collective Bargaining

Duration of Appointment: Career Service Appointment

Position Designation: "This position is designated as a Safety Sensitive position and is subject to mandatory pre-employment and periodic Criminal Background Checks and Traffic Records Checks (as applicable). This position is also subject to mandatory pre-employment and random Drug and Alcohol Testing. In this position, you may be disqualified from employment based on the presence of marijuana in test results, even if you possess a medical card authorizing the use of medical marijuana." A TB Test will be required prior to entry on duty.

EEO Statement

The District of Columbia Government is an Equal Opportunity Employer. All qualified candidates will receive consideration without regard to race, color religion, national orgin, sex, age, marital status, personal appearance, sexual orientation, family responsibilities, matriculation, physical handicap, or political affiliation.

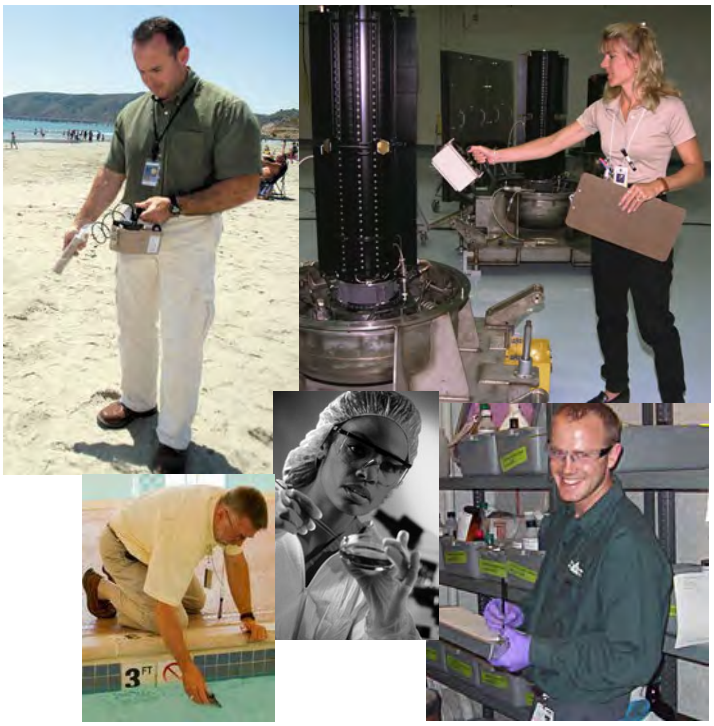
Ex

NEHA
Registered Environmental Health Specialist/Registered Sanitarian (REHS/RS®)



Candidate Information Brochure

NATIONAL ENVIRONMENTAL HEALTH ASSOCIATION

Revised 10/26/2018

REHS/RS® Examination

Eligibility Requirements

To be eligible to sit for the REHS/RS® credential examination, a candidate must meet all of the criteria for Track A or Track B or Track C.

Track A – Environmental Health Degree Track. You must be able to answer YES to all the questions for Track A. If you answer a question with a "No," proceed to Track B.

1. Do you have a Bachelor's degree, Master's degree or PhD from a college or university in the United States? Yes_____ No_____. For foreign degrees and diplomas, see the section below on foreign education.
2. Is your degree in Environmental Health? Yes_____ No_____
3. Is your school and degree program on the appropriate EHAC list below? Yes_____ No_____
    a. Bachelor's in Environmental Health: http://www.nehspac.org/about-ehac/accredited-programs-ehac-undergraduate-programs/
    b. Master's or PhD in Environmental Health: http://www.nehspac.org/about-ehac/accredited-programs-ehac-graduate-programs/

If you answered "Yes" to all three questions above, you can apply on Track A. You will not need to submit proof of work experience.

Track B – Bachelor's Degree Track. You must be able to answer YES to all questions for Track B. If you answer a question with a "No," proceed to Track C.

1. Do you have a Bachelor's degree, Master's degree or PhD from a college or university accredited in the United States? Your degree can be in any subject. Yes_____ No_____. For foreign degrees or diplomas, see the section below on foreign education.
2. Do you have 30 semester hours (or 45 quarter hours) of college credit in basic science coursework? Basic sciences include Life Sciences, Natural Sciences, Physical Sciences or Health Sciences. Yes_____ No_____.
3. Do you have credit for a college level Math or Statistics class? Yes_____ No_____
4. Do you have two years or more experience working in environmental health*? Work experience should be full-time paid work. Yes_____No_____

** Eligible areas of environmental health include general environmental health (including inspections, environmental microbiology, and contamination control), food protection, wastewater, solid and hazardous waste, potable water, inspections of facilities, vectors and pests, institutions and licensed establishments, swimming pool inspections, radiation, occupational safety and health, healthy housing, indoor air quality, disaster and emergency planning, and environmental health issues related to climate change.*

Track C – "In Training" Track. On Track B above, if you said YES to questions 1, 2, and 3 but you do NOT have two years of work experience in environmental health, you

can apply on the "In Training" Track. You would choose REHS/RS®-In Training (I.T.) on the application. You will not be required to submit proof of work experience. If you pass the exam, your certificate will say, "REHS/RS® – In Training." You will then have 3 years to obtain 2 years of work experience. Once you have acquired that experience, you can qualify for the full REHS/RS® certificate by notifying NEHA and submitting proof of work experience. If you do not obtain the 2 years of work experience, your "In Training" status will expire and you risk losing the credential and may have to reapply and retake the exam.

On Track B above, if you said NO to question 1 (and you do not have a foreign degree either) ***OR*** said NO to question 2 (science hours) ***OR*** question 3 (math class), then your education does not meet the requirements for the REHS/RS® credential set by the NEHA Board of Directors.

The Board of Directors has ruled that NEHA cannot accept work experience in lieu of college coursework.

If you are not sure about whether your college courses meet the requirements, you can request a transcript review as noted below.

Transcript Review for United States College Transcripts

Candidates with education from within the United States can request NEHA to review their transcripts for eligibility separate from the application procedure for $50. A transcript review form must be completed and is available at http://neha.org/sites/default/files/Transcript-Review.pdf.
Please see additional instructions on the form.

The $50 fee is non-refundable even if NEHA finds that your education does not meet the REHS/RS® qualification requirements. It can take 2-4 weeks for your transcripts to be reviewed and you will be notified by letter and/or e-mail.

Foreign Education

If you have college or university education from outside the United States or its territories, you must have your foreign education evaluated by a "third party" foreign education evaluation service to determine equivalency to a Bachelor's degree in the United States. You must submit an evaluation report with your NEHA Credential Application or the report can be sent by the evaluation service directly to NEHA.

NEHA cannot evaluate foreign educational documents even if they have been translated into English. All foreign transcripts must be evaluated by foreign education specialists.

NEHA strongly recommends you choose a service that is a member of the National Association of Credential Evaluation Services (NACES). For information on NACES member companies, go to www.naces.org.

Canadian education is considered foreign education. It must be evaluated by a third party evaluation service.

Completing the Application

Applications must be completed and submitted to NEHA for review at least 6 weeks prior to the exam date. If an application is received less than 6 weeks prior to your planned exam date, you may have to schedule the exam for another date.

A complete application should include:

1. Completed NEHA Application.
2. Official College Transcripts. To be considered an official transcript it should be received at the NEHA office in the sealed envelope from the College Registrar's Office/Transcript Office. It can be sent directly from the school to NEHA or submitted with the application in the sealed school envelope. Electronic transcripts from the school or transcript service are accepted when e-mailed to credentialing@neha.org.
3. Work Experience Verification Form signed by a third party.
4. Appropriate fees.
5. Third party review report (applicable for candidates with foreign education).

Application Expiration Policy

Applications are good for 2 years from the date NEHA received them. If you have not tested within 2 years of applying, you will need to submit a new application and fees.

Exam Fees

All fees should accompany the NEHA Application.

	Member Rate	Non-Member Rate
Application fees:	$95.00	$130.00
Examination fees:	$185.00	$335.00
Pearson VUE fee (if applicable):	$110.00	$110.00

Exam Scheduling and Locations

Candidates can choose to schedule the REHS/RS® examination in several different ways:

1. The REHS/RS® exam is offered annually at the NEHA Annual Educational Conference (AEC) & Exhibition. See neha.org for AEC information.

2. Candidates can choose to take the exam on computer through ***Pearson VUE.*** By choosing this option candidates can schedule the examination at their convenience at one of ***Pearson VUE's*** testing locations nationwide. To find a ***Pearson VUE*** testing center near you please visit http://www.pearsonvue.com/neha. Taking the exam at ***Pearson VUE*** not only offers the candidate flexibility in scheduling the exam, but also allows the candidate to receive his/her unofficial scores immediately following the conclusion of the exam.

3. Special test sites may be arranged through NEHA. Must have a minimum of 3 NEHA credential testing candidates. In order to accommodate requests for special test sites, arrangements must be made a minimum of 6-8 weeks prior to the requested date. The fee to set up a special test site is $350.00. For groups of 10 or more exam candidates, the special test site fee is waived. Credential applications are due 6 weeks before the test date. Please complete the Special Test Site Request form (Appendix A) and return it to NEHA with your application.

Special Accommodations for Candidates with Disabilities or Impairments
NEHA is committed to ensuring that no individual is deprived of the opportunity to take a credentialing examination solely by reason of a disability or impairment. All test centers are fully accessible and compliant with the American with Disabilities Act (ADA).

To make a request for special accommodations you must complete the ADA Accommodation Request Form including the specific diagnosis of your disability, Section 2 filled out and signed by an appropriate licensed professional, and the type of accommodation being requested. All forms and documentation must be returned to NEHA at least 8 weeks prior to the scheduled test date. To receive a copy of the form please contact Credentialing@neha.org.

If the forms are not returned to NEHA at least 8 weeks prior to the scheduled test date, your request for special accommodations may not be honored or may be delayed.

With respect to all matters related to testing accommodations, NEHA will only communicate with the candidate, professionals knowledgeable about the candidate's disability or impairment, the candidate's authorized representative (if applicable), Professional Testing Inc. (PTI) and the test administrator or proctor.

Computer Testing at Pearson VUE: NEHA will send you an authorization letter via e-mail when your application is processed as approved. Then you will get another e-mail, 1-3 days later, from Pearson VUE c/o PTI. That e-mail will have your PTI ID number and instructions on how to schedule the exam at Pearson VUE. The PTI ID number is good for one year.

On test day you must bring your photo ID as required by Pearson VUE's instructions.

If you need to postpone your scheduled computer test, you must contact Pearson VUE at least 24 hours in advance of your scheduled test time. If you do not show up and did not give at least 24 hours' notice, you will forfeit your Exam Fee and your Computer Test Fee. Contact NEHA to pay your fees again so you can be authorized to reschedule.

Taking a Paper and Pencil Exam, Admission Letter:
If you are taking the exam on paper (not computer), NEHA will send an admission letter approximately 2 weeks prior to your test date. The admission letter will detail the exam date and location, reporting time, and starting time. Those that do not appear on the date of the exam at the appropriate time will forfeit all exam fees. Persons arriving after the examination has started may not be admitted.

If you lost your admission letter or have not received an admission letter at least 2 days prior to the test date, please contact NEHA.

Only approved candidates will be admitted to the exam. No walk-in applicants will be admitted.

On test day please bring with you your admission letter, photo identification (i.e. driver's license or passport), and sharpened #2 pencils.

Scores

The NEHA REHS/RS® examination will report scores using scaled scores that range from 0 to 900 with a passing score of 650. The raw passing score is mathematically transformed so that the passing scaled score equals 650. This process is similar to the way one adjusts Celsius and Fahrenheit temperature scales. While the values may differ the temperatures are the same. For example, water boils at the same temperature regardless of the scale used.

Candidates who pass the examination will earn scaled scores of 650 and above, and those who fail will earn a scaled score between 0 and 649. A scaled score is NOT a percentage score. In summary, a scaled score is merely a transformation of a raw score. Scaling is done to report comparable results when forms and raw passing scores vary over time. This is similar to the SAT scores for entrance to college.

Your score will be based on the number of questions answered correctly. If you are unsure of the answer it is better to guess. You will not be given credit for any question left blank.

Your exam results will be mailed to you from the NEHA office 4-6 weeks after the administration.

If you pass the exam, NEHA will send you a credentialing packet with a score letter, certificate, wallet card and Continuing Education information.

If you fail the exam, NEHA will send you a score letter and a Retake Application. You must wait at least 90 days from your test date before you can retake the exam. To retake the exam, you need to submit the Retake Application and pay the Exam Fee and Computer Test Fee, if you will retake the exam on computer. You do not need to do the whole application again or resubmit transcripts. There is no limit on the number of times you can retake the exam, but you must wait 90 days between each attempt.

Reciprocity

In some cases, if you hold a state REHS/RS® credential, you may be eligible to receive NEHA's REHS/RS® credential without re-examination (reciprocity). In order to be eligible for reciprocity you must:

1. Have a valid, current state registration; and

2. Have a Bachelor's degree with 30 semester/45 quarter hours in basic sciences; and
3. Have a passing score of:
    a. 650 or higher on the NEHA exam taken on or after July 13, 2014, or
    b. 68% or higher on the NEHA exam taken between January 1, 1998, and July 12, 2014, or
    c. 70% or higher on the PES exam provided it was taken before December 31, 1997. PES exams taken after this date are not eligible to receive national REHS/RS® reciprocity through NEHA.

For more information on qualifying for national REHS/RS® reciprocity please contact the NEHA Credentialing Department at (303) 756-9090 ext. 310, or email credentialing@neha.org.

Credential Maintenance

Once you have obtained the REHS/RS® credential you must maintain it. To keep your credential in good standing you must:

1. Submit a minimum of 24 hours of continuing education every two years; and
2. Submit renewal fees for your credential every two years ($130.00 members; $345.00 non-members).

NEHA's Credentialing Handbook

It is strongly recommended that you read NEHA's Credentialing Handbook: *Guide to Policies and Procedures for NEHA's Credentialing Programs*. This handbook outlines all the policies you are expected to follow by being a NEHA credential holder. The handbook also outlines in further detail the procedures for applying for a credential, submitting continuing education, and maintaining your credential.

You can access the Credentialing Handbook at www.neha.org. Click on Professional Development, then click on Credentials and look for the link to the Handbook on the left side.

Exam Description and Content Outline

The REHS/RS® examination consists of a total of 250 multiple-choice questions. The exam is split into two parts of 125 questions each. Candidates are given a total of four (4) hours to complete the entire exam or two (2) hours for each part with a short 10-minute break in between. Of the 250 items, 225 will be scored. The remaining 25 questions will be unscored, pilot questions. Those items will not be called out within the exam.

Below is an outline of the different content areas the examination covers and the percentages allotted to each of those areas. Please use this outline as a guide when preparing for the examination.

Content Areas		Final Weight	Number of Items
A	Conducting Facility Inspections	35.0%	79
1	Prioritize Inspections	1.0%	2
2	Maintain Inspection Equipment	1.0%	2
3	Perform Food Facility Inspections	17.5%	40
4	Perform Institution Inspections	2.0%	5
5	Perform Recreational Water Inspections	2.5%	6
6	Perform Group Gathering Inspections	2.0%	4
7	Perform Healthy Homes Inspections	2.0%	4
8	Perform Hazardous Waste Inspections	1.0%	2
9	Perform Bio-Medical Facility Inspections	1.0%	2
10	Perform Confined Feeding Operations Inspections	1.0%	2
11	Perform Other Facility Inspections	2.0%	5
12	Perform Solid Waste Facility Inspections	2.0%	5
B	Conducting System Inspections	20.0%	45
1	Perform Occupational Health and Safety Inspections	2.0%	5
2	Perform Onsite Waste Water System Inspections	12.0%	27
3	Perform Potable Water Quality Inspections	6.0%	13
C	Conducting Investigations	14.0%	32
1	Perform Complaint Investigations	5.0%	11
2	Perform Epidemiology Investigations	4.0%	9
3	Investigate Illegal Operators	2.0%	4
4	Perform Hazardous Waste Investigations	1.5%	3
5	Perform Indoor Air Quality Investigations	2.0%	5
D	Ensuring Compliance	13.0%	29
1	Develop Regulations	1.0%	2
2	Conduct Plan Review	5.0%	11
3	Review Establishment's HACCP Plan	2.0%	5
4	Provide Technical Assistance to Stakeholders	5.0%	11
E	Promoting Environmental Public Health Awareness	10.0%	22
1	Conduct Environmental Public Health Assessment	1.0%	2
2	Establish Community Partnerships	1.0%	2
3	Conduct Community Outreach	2.0%	4
4	Communicate Environmental Public Health Risks to Stakeholders	3.0%	7

5	Conduct Environmental Surveillance	3.0%	7
F	Responding To Emergencies	8.0%	18
1	Assess Community Risks	1.5%	3
2	Create Environmental Public Health Emergency Preparedness Plans	2.0%	5
3	Conduct Emergency Preparedness Training	1.0%	2
4	Implement Environmental Public Health Emergency Preparedness Plan	2.0%	5
5	Conduct Recovery Follow-up	1.5%	3
	Total	**100.0%**	**225**

Sanitarian

Company: District of Columbia Department of Health

Location: Washington, D.C.

DC | HEALTH
GOVERNMENT OF THE DISTRICT OF COLUMBIA

Date Posted: January 6, 2020

Application Deadline: January 12, 2020

Employment Type: Full time

Salary: $62,287.00 - $78,190.00

Sanitarian

About the Position

Bring your professional career to Washington, D.C., the most dynamic and diverse city in the country. With its proximity to major museums, world class parks, entertainment and restaurants, increasing job opportunities and the seat of the federal government. The District of Columbia continues to be ranked the top 10 thriving city indicators where you can live work and play. Contribute to and work for a nationally accredited Health Department. The District of Columbia, Department of Health (DC Health) earned national accredited by the Public Health Accreditation Board (PHAB) and is an early adopter in attaining the designation. Come see where your skills are appreciated and rewarded by applying the following public health opportunity.

This position is located in the Department of Health (DC Health), Health Regulation and Licensing Administration (HRLA), Food Safety and Hygiene Inspection Services Division (FSHISD). The FSHISD is responsible for protecting the

public health and safety and the environment of the residents and visitors in the District of Columbia through inspecting and protecting the food supply, inspecting other non-food health establishments, such as, spas, and investigating food borne illnesses. Incumbent is responsible for inspecting and evaluating environment health conditions throughout the food service industry through periodic inspections of food service establishments, such as, restaurants, grocery stores, delicatessens, food vendors, ice cream and diary plants and open air markets. Incumbent also inspects and evaluates environment health conditions in non-food establishments, such as, beauty and barber shops, nail salons, public baths, spas, massage parlors, health clubs, bedding manufacturers, electrolysis salons and swimming pools.

Duties and Responsibilities

The incumbent serves as a Sanitarian and will be responsible for conducting daily route and work assignments to ensure timely completion as well as addressing appointments, consultations and instructional meetings relative to promoting improvement within assigned area. The incumbent performs routine inspections of low to moderate risk food and non-food establishments and determines what type of action to take once violations or unsanitary conditions are found and conducts re-inspection investigations of low to moderate risk facilities to ensure that establishments are in compliance with verbal or written instructions of abatement. The incumbent investigates low to moderate risk public and official complaints alleging violations or unsanitary conditions within food and non-food establishments that may result in a possible hygienic-related or food borne illness. In the event that the owner/manager fails to comply with requirements, the incumbent initiates enforcement actions on routine matters and refers more complex or controversial issues to Supervisor. The incumbent will prepare written reports explaining the violations found during inspections, along with recommendations and a deadline for abatement.

The incumbent utilizes observational techniques and a variety of detection instruments and solutions, as well as specialized equipment in the conduct of inspections and investigations. The incumbent serves as a witness for the agency in cases where owners/managers have not complied with the District laws and regulations and appears at the administrative trials. The incumbent provides factual testimony and prepares and presents evidence for pertinent cases. The incumbent also compiles and prepares statistical reports for use by management staff in analyzing program/project progress to ensure that internal and external reporting is completed in a timely manner. The incumbent Responds quickly, orally and in writing, to inquiries, provides relevant information to the public concerning Division programs and services.

Working Conditions and Environment

The work environment involves moderate risk or discomfort, which require safety precautions typical of an office or duties conducted in the field. The office is adequately lighted and ventilated. Incumbent is required to conduct field activities in inclement weather.

Other Significant Facts

Tour of Duty: Monday – Friday – 8:15 a.m. – 4:45 p.m.

Promotion Potential: None

Duration of Appointment: Career Service (Permanent) Appointment

Pay Plan, Series and Grade: CS-688-09

This position is in the collective bargaining unit represented by AFGE Local 2725 and you may be required to pay an agency fee (dues) through direct payroll.

Employee's work schedule will or may deviate from the standard tour of duty to accommodate evening inspections of facilities for observation of Hookah violations or other violations enforced by FSHISD.

Emergency Designation

This position has been designated as Emergency.

Employees occupying positions designated as Emergency are required to:

Provide advice, recommendations, and/or specific functional support necessary for the continuity of operations during a declared emergency.
Remain at their duty station, or alternate work location (approved by their supervisor), if activated, when a situation or condition occurs and results in early dismissal for nonessential/non-emergency employees.

Report to their duty station, when activated, on time and as scheduled when a situation or condition occurs during non-work hours, and results in the late arrival or closing of District government offices for non-essential/non-emergency employees.

Telework during a declared emergency, instead of remaining or reporting to his or her duty station, if directed by the agency head (or designee), supervisor or manager.
Carry or wear their official District government ID card during the period of the declared emergency, if not teleworking.
Position Designation: Security Sensitive under the guidelines of the DC Personnel Manual. Incumbents of this position are subject to enhanced suitability screening pursuant to Chapter 4 of DC personnel regulations, and are subject to the following checks and test:

(a) Criminal background check;

(b) Traffic record check (as applicable);

(c) Consumer credit check (as applicable);

(d) Reasonable suspicion drug and alcohol test; and

(e) Post-accident or incident drug and alcohol test.

EEO Statement: The District of Columbia Government is an Equal Opportunity Employer. All qualified candidates will receive consideration without regard to race, color, religion, national origin, sex, age, marital status, personal appearance,

sexual orientation, family responsibilities, matriculation, physical handicap, or political affiliation.

Qualifications

Individuals must possess one (1) year of specialized experience equivalent to the Grade 07 level, or its non-District equivalent. Specialized experience is experience which is in or directly related to the line of work of this position and has equipped the applicant with the particular knowledge, skills, and abilities to successfully perform the duties of this position.

A full 4-year course of study that meets all the requirements for a bachelor's degree, and that included or was supplemented by at least 30 semester hours in a science or any combination of sciences directly related to environmental health (such as sanitary science, public health, chemistry, microbiology, or any appropriate agricultural, biological, or physical science).

or

Four years of experience in inspectional, investigational, technical support, or other responsible work that provided a knowledge and a fundamental understanding of, and the ability to use, environmental health principles, methods, and techniques equivalent to that which would have been gained through a 4-year college curriculum.

or

A combination of education and experience as described above.

In addition to meeting the basic requirements, applicants must have the amounts of education and/or experience required for the grade level as shown below:

Requirements:

GS-9 - 2 full years of progressively higher level graduate education or master's or equivalent graduate degree related to environmental health and 1 year of experience equivalent to at least the GS-7 level.

Licenses, Certifications, and Other Requirements

Incumbent is required to possess a valid driver license in order to drive a government/personal vehicle to inspection sites.

How to Apply

Go to **https://dchr.dc.gov/page/careers <https://dchr.dc.gov/page/careers>** and click on Careers DC. Search for "Sanitarian" or Job ID "9490"

CENTERS FOR DISEASE CONTROL AND PREVENTION

The COVID-19 pandemic is a serious global health threat, and CDC is committed to stopping its spread. CDC has a long history of strengthening public health capacity throughout the world to contain outbreaks at their source and minimize their impact.

CDC is working closely with the World Health Organization (WHO) and other partners to assist countries to prepare for and respond to COVID-19. CDC routinely provides technical assistance to ministries of health and subnational and international partners to improve our collective response to infectious disease threats like COVID-19.

This interim guidance is based on what is currently known about the transmission and severity of coronavirus disease 2019 (COVID-19) as of the date of posting, October 7, 2020.

This document provides interim guidance specific for correctional facilities and detention centers during the outbreak of COVID-19, to ensure continuation of essential public services and protection of the health and safety of incarcerated and detained persons, staff, and visitors. Recommendations may need to be revised as more information becomes available.

*__Guidance for Cleaning and Disinfecting-__ attachment A

*__Reopening Guidance for Cleaning and Disinfecting Public Spaces, Workplaces, Businesses, Schools, and Homes-__ attachment B

*__Cleaning and Disinfecting Your Facility-__ attachment C

Interim Guidance on Management of Coronavirus Disease 2019 (COVID-19) in Correctional and Detention Facilities

Updated Oct. 21, 2020

Cleaning and Disinfecting Practices

√ Even if COVID-19 has not yet been identified inside the facility or in the surrounding community, implement intensified cleaning and disinfecting procedures according to

the recommendations below. These measures can help prevent spread of SARS-CoV-2 if introduced, and if already present through asymptomatic infections**.**

√ **Adhere to CDC recommendations for cleaning and disinfection during the COVID-19 response.** Monitor these recommendations for updates.

- Visit the CDC website for a tool to help implement cleaning and disinfection.
- Several times per day, clean and disinfect surfaces and objects that are frequently touched, especially in common areas. Such surfaces may include objects/surfaces not ordinarily cleaned daily (e.g., doorknobs, light switches, sink handles, countertops, toilets, toilet handles, recreation equipment, kiosks, telephones, and computer equipment).
- Staff should clean shared equipment (e.g., radios, service weapons, keys, handcuffs) several times per day and when the use of the equipment has concluded.
- Use household cleaners and EPA-registered disinfectants effective against SARS-CoV-2, the virus that causes COVID-19external icon as appropriate for the surface.
- Follow label instructions for safe and effective use of the cleaning product, including precautions that should be taken when applying the product, such as wearing gloves and making sure there is good ventilation during use, and around people. Clean according to label instructions to ensure safe and effective use, appropriate product dilution, and contact time. Facilities may consider lifting restrictions on undiluted disinfectants (i.e., requiring the use of undiluted product), if applicable.

√ Consider increasing the number of staff and/or incarcerated/detained persons trained and responsible for cleaning common areas to ensure continual cleaning of these areas throughout the day.

√ Ensure adequate supplies to support intensified cleaning and disinfection practices, and have a plan in place to restock rapidly if needed.

Hygiene

√ Encourage all staff and incarcerated/detained persons to wear a cloth face mask as much as safely possible, to prevent transmission of SARS-CoV-2 through respiratory droplets that are created when a person talks, coughs, or sneezes (“source control”).

- Provide masks at no cost to incarcerated/detained individuals and launder them routinely.
- Clearly explain the purpose of masks and when their use may be contraindicated. Because many individuals with COVID-19 do not have

symptoms, it is important for everyone to wear masks in order to protect each other: "My mask protects you, your mask protects me."

- Ensure staff know that cloth masks should not be used as a substitute for surgical masks or N95 respirators that may be required based on an individual's scope of duties. Cloth masks are not PPE but are worn to protect others in the surrounding area from respiratory droplets generated by the wearer.
- Surgical masks may also be used as source control but should be conserved for situations requiring PPE.

√ Reinforce healthy hygiene practices, and provide and continually restock hygiene supplies throughout the facility, including in bathrooms, food preparation and dining areas, intake areas, visitor entries and exits, visitation rooms and waiting rooms, common areas, medical, and staff-restricted areas (e.g., break rooms).

check light icon Provide incarcerated/detained persons and staff no-cost access to:

- **Soap** – Provide liquid or foam soap where possible. If bar soap must be used, ensure that it does not irritate the skin, as this would discourage frequent hand washing, and ensure that individuals are not sharing bars of soap.
- **Running water, and hand drying machines or disposable paper towels** for hand washing
- **Tissues** and (where possible) no-touch trash receptacles for disposal
- Face masks

√ **Provide alcohol-based hand sanitizer with at least 60% alcohol where permissible based on security restrictions.** Consider allowing staff to carry individual-sized bottles to maintain hand hygiene.

√ Communicate that sharing drugs and drug preparation equipment can spread SARS-CoV-2 due to potential contamination of shared items and close contact between individuals.

DC Department of Youth and Rehabilitation Services

Training schedule to be devised within next seven days.

Dwayne Coley has agreed to assist DOC in the training of our Sanitarian.

Training shall begin November 16, 2020. We will meet within the next seven days to discuss a training plan.

DC Department of Corrections Environmental and Fire Safety Programs

Internal training shall begin once training with DYRS Sanitarian is complete.

Training shall include:

Bloodborne pathogens

By: Gloria J Robertson/information from K Robinson

COVID Cleaning

By: Sgt. Wortham and Gloria J Robertson

Environmental Practices (inspections):

By: Sgt. Wortham

Self-Study:

Potomac Hudson Engineering Inc, "Onsite Audit Inspection Report" – attachment D

U.S. DEPARTMENT OF LABOR

OVERVIEW:

What are bloodborne pathogens?

Bloodborne pathogens are infectious microorganisms in human blood that can cause disease in humans. These pathogens include, but are not limited to, hepatitis B (HBV), hepatitis C (HCV) and human immunodeficiency virus (HIV). Needlesticks and other sharps-related injuries may expose workers to bloodborne pathogens. Workers in many occupations, including first responders, housekeeping personnel in some industries, nurses and other healthcare personnel, all may be at risk for exposure to bloodborne pathogens.

What can be done to control exposure to bloodborne pathogens?

In order to reduce or eliminate the hazards of occupational exposure to bloodborne pathogens, an employer must implement an exposure control plan for the worksite with details on employee protection measures. The plan must also describe how an employer will use engineering and work practice controls, personal protective clothing and equipment, employee training, medical surveillance, hepatitis B vaccinations, and other provisions as required by OSHA's Bloodborne Pathogens Standard (29 CFR 1910.1030). Engineering controls are the primary means of eliminating or minimizing employee exposure and include the use of safer medical devices, such as needleless devices, shielded needle devices, and plastic capillary tubes.

To continue training, please access via link:

https://www.osha.gov/bloodborne-pathogens

ATTACHMENT A

GUIDANCE FOR CLEANING AND DISINFECTING

GUIDANCE FOR CLEANING AND DISINFECTING

PUBLIC SPACES, WORKPLACES, BUSINESSES, SCHOOLS, AND HOMES

SCAN HERE FOR MORE INFORMATION

This guidance is intended for all Americans, whether you own a business, run a school, or want to ensure the cleanliness and safety of your home. Reopening America requires all of us to move forward together by practicing social distancing and other daily habits to reduce our risk of exposure to the virus that causes COVID-19. Reopening the country also strongly relies on public health strategies, including increased testing of people for the virus, social distancing, isolation, and keeping track of how someone infected might have infected other people. This plan is part of the larger United States Government plan and focuses on cleaning and disinfecting public spaces, workplaces, businesses, schools, and can also be applied to your home.

Cleaning and disinfecting public spaces including your workplace, school, home, and business will require you to:

- Develop your plan
- Implement your plan
- Maintain and revise your plan

Reducing the risk of exposure to COVID-19 by cleaning and disinfection is an important part of reopening public spaces that will require careful planning. Every American has been called upon to slow the spread of the virus through social distancing and prevention hygiene, such as frequently washing your hands and wearing face coverings. Everyone also has a role in making sure our communities are as safe as possible to reopen and remain open.

The virus that causes COVID-19 can be killed if you use the right products. EPA has compiled a list of disinfectant products that can be used against COVID-19, including ready-to-use sprays, concentrates, and wipes. Each product has been shown to be effective against viruses that are harder to kill than viruses like the one that causes COVID-19.

This document provides a general framework for cleaning and disinfection practices. The framework is based on doing the following:

1. Normal routine cleaning with soap and water will decrease how much of the virus is on surfaces and objects, which reduces the risk of exposure.
2. Disinfection using EPA-approved disinfectants against COVID-19 can also help reduce the risk. Frequent disinfection of surfaces and objects touched by multiple people is important.
3. When EPA-approved disinfectants are not available, alternative disinfectants can be used (for example, 1/3 cup of bleach added to 1 gallon of water, or 70% alcohol solutions). Do not mix bleach or other cleaning and disinfection products together—this can cause fumes that may be very dangerous to breathe in. Keep all disinfectants out of the reach of children.

Links to specific recommendations for many public spaces that use this framework, can be found at the end of this document.
It's important to continue to follow federal, state, tribal, territorial, and local guidance for reopening America.

A Few Important Reminders about Coronaviruses and Reducing the Risk of Exposure:

- Coronaviruses on surfaces and objects naturally die within hours to days. Warmer temperatures and exposure to sunlight will reduce the time the virus survives on surfaces and objects.
- Normal routine cleaning with soap and water removes germs and dirt from surfaces. It lowers the risk of spreading COVID-19 infection.
- Disinfectants kill germs on surfaces. By killing germs on a surface after cleaning, you can further lower the risk of spreading infection. EPA-approved disinfectants are an important part of reducing the risk of exposure to COVID-19. If disinfectants on this list are in short supply, alternative disinfectants can be used (for example, 1/3 cup of bleach added to 1 gallon of water, or 70% alcohol solutions).
- Store and use disinfectants in a responsible and appropriate manner according to the label. Do not mix bleach or other cleaning and disinfection products together—this can cause fumes that may be very dangerous to breathe in. Keep all disinfectants out of the reach of children.
- Do not overuse or stockpile disinfectants or other supplies. This can result in shortages of appropriate products for others to use in critical situations.
- Always wear gloves appropriate for the chemicals being used when you are cleaning and disinfecting. Additional personal protective equipment (PPE) may be needed based on setting and product. For more information, see CDC's website on Cleaning and Disinfection for Community Facilities.
- Practice social distancing, wear facial coverings, and follow proper prevention hygiene, such as washing your hands frequently and using alcohol-based (at least 60% alcohol) hand sanitizer when soap and water are not available.

> If you oversee staff in a workplace, your plan should include considerations about the safety of custodial staff and other people who are carrying out the cleaning or disinfecting. These people are at increased risk of being exposed to the virus and to any toxic effects of the cleaning chemicals. These staff should wear appropriate PPE for cleaning and disinfecting. To protect your staff and to ensure that the products are used effectively, staff should be instructed on how to apply the disinfectants according to the label. For more information on concerns related to cleaning staff, visit the Occupational Safety and Health Administration's website on Control and Prevention.

DEVELOP YOUR PLAN

Evaluate your workplace, school, home, or business to determine what kinds of surfaces and materials make up that area. Most surfaces and objects will just need normal routine cleaning. Frequently touched surfaces and objects like light switches and doorknobs will need to be cleaned and then disinfected to further reduce the risk of germs on surfaces and objects.

- First, clean the surface or object with soap and water.
- Then, disinfect using an EPA-approved disinfectant.
- If an EPA-approved disinfectant is unavailable, you can use 1/3 cup of bleach added to 1 gallon of water, or 70% alcohol solutions to disinfect. Do not mix bleach or other cleaning and disinfection products together. Find additional information at CDC's website on Cleaning and Disinfecting Your Facility.

You should also consider what items can be moved or removed completely to reduce frequent handling or contact from multiple people. Soft and porous materials, such as area rugs and seating, may be removed or stored to reduce the challenges with cleaning and disinfecting them. Find additional reopening guidance for cleaning and disinfecting in the Reopening Decision Tool.

It is critical that your plan includes how to maintain a cleaning and disinfecting strategy after reopening. Develop a flexible plan with your staff or family, adjusting the plan as federal, state, tribal, territorial, or local guidance is updated and if your specific circumstances change.

Determine what needs to be cleaned

Some surfaces only need to be cleaned with soap and water. For example, surfaces and objects that are not frequently touched should be cleaned and do not require additional disinfection. Additionally, disinfectants should typically not be applied on items used by children, especially any items that children might put in their mouths. Many disinfectants are toxic when swallowed. In a household setting, cleaning toys and other items used by children with soap and water is usually sufficient. Find more information on cleaning and disinfection toys and other surfaces in the childcare program setting at CDC's Guidance for Childcare Programs that Remain Open.

These questions will help you decide which surfaces and objects will need normal routine cleaning.

Is the area outdoors?

Outdoor areas generally require normal routine cleaning and do not require disinfection. Spraying disinfectant on sidewalks and in parks is not an efficient use of disinfectant supplies and has not been proven to reduce the risk of COVID-19 to the public. You should maintain existing cleaning and hygiene practices for outdoor areas.

The targeted use of disinfectants can be done effectively, efficiently and safely on outdoor hard surfaces and objects frequently touched by multiple people. Certain outdoor areas and facilities, such as bars and restaurants, may have additional requirements. More information can be found on CDC's website on Food Safety and the Coronavirus Disease 2019 (COVID-19).

There is no evidence that the virus that causes COVID-19 can spread directly to humans from water in pools, hot tubs or spas, or water play areas. Proper operation, maintenance, and disinfection (for example, with chlorine or bromine) of pools, hot tubs or spas, and water playgrounds should kill the virus that causes COVID-19. However, there are additional concerns with outdoor areas that may be maintained less frequently, including playgrounds, or other facilities located within local, state, or national parks. For more information, visit CDC's website on Visiting Parks & Recreational Facilities.

Has the area been unoccupied for the last 7 days?

If your workplace, school, or business has been unoccupied for 7 days or more, it will only need your normal routine cleaning to reopen the area. This is because the virus that causes COVID-19 has not been shown to survive on surfaces longer than this time.

There are many public health considerations, not just COVID-19 related, when reopening public buildings and spaces that have been closed for extended periods. For example, take measures to ensure the safety of your building water system. It is not necessary to clean ventilation systems, other than routine maintenance, as part of reducing risk of coronaviruses. For healthcare facilities, additional guidance is provided on CDC's Guidelines for Environmental Infection Control in Health-Care Facilities.

Determine what needs to be disinfected

Following your normal routine cleaning, you can disinfect frequently touched surfaces and objects using a product from EPA's list of approved products that are effective against COVID-19.

These questions will help you choose appropriate disinfectants.

Are you cleaning or disinfecting a hard and non-porous material or item like glass, metal, or plastic?

Consult EPA's list of approved products for use against COVID-19. This list will help you determine the most appropriate disinfectant for the surface or object. You can use diluted household bleach solutions if appropriate for the surface. Pay special attention to the personal protective equipment (PPE) that may be needed to safely apply the disinfectant and the manufacturer's recommendations concerning any additional hazards. Keep all disinfectants out of the reach of children. Please visit CDC's website on How to Clean and Disinfect for additional details and warnings.

Examples of frequently touched surfaces and objects that will need routine disinfection following reopening are:

- tables,
- doorknobs,
- light switches,
- countertops,
- handles,
- desks,
- phones,
- keyboards,
- toilets,
- faucets and sinks,
- gas pump handles,
- touch screens, and
- ATM machines.

Each business or facility will have different surfaces and objects that are frequently touched by multiple people. Appropriately disinfect these surfaces and objects. For example, transit stations have specific guidance for application of cleaning and disinfection.

Are you cleaning or disinfecting a soft and porous material or items like carpet, rugs, or seating in areas?

Soft and porous materials are generally not as easy to disinfect as hard and non-porous surfaces. EPA has listed a limited number of products approved for disinfection for use on soft and porous materials. Soft and porous materials that are not frequently touched should only be cleaned or laundered, following the directions on the item's label, using the warmest appropriate water setting. Find more information on CDC's website on Cleaning and Disinfecting Your Facility for developing strategies for dealing with soft and porous materials.

Consider the resources and equipment needed

Keep in mind the availability of cleaning and disinfection products and appropriate PPE. Always wear gloves appropriate for the chemicals being used for routine cleaning and disinfecting. Follow the directions on the disinfectant label for additional PPE needs. In specific instances, personnel with specialized training and equipment may be required to apply certain disinfectants such as fumigants or fogs. For more information on appropriate PPE for cleaning and disinfection, see CDC's website on Cleaning and Disinfection for Community Facilities.

IMPLEMENT YOUR PLAN

Once you have a plan, it's time to take action. Read all manufacturer's instructions for the cleaning and disinfection products you will use. Put on your gloves and other required personal protective equipment (PPE) to begin the process of cleaning and disinfecting.

Clean visibly dirty surfaces with soap and water

Clean surfaces and objects using soap and water prior to disinfection. Always wear gloves appropriate for the chemicals being used for routine cleaning and disinfecting. Follow the directions on the disinfectant label for additional PPE needs. When you finish cleaning, remember to wash hands thoroughly with soap and water.

Clean or launder soft and porous materials like seating in an office or coffee shop, area rugs, and carpets. Launder items according to the manufacturer's instructions, using the warmest temperature setting possible and dry items completely.

Use the appropriate cleaning or disinfectant product

EPA approved disinfectants, when applied according to the manufacturer's label, are effective for use against COVID-19. Follow the instructions on the label for all cleaning and disinfection products for concentration, dilution, application method, contact time and any other special considerations when applying.

Always follow the directions on the label

Follow the instructions on the label to ensure safe and effective use of the product. Many product labels recommend keeping the surface wet for a specific amount of time. The label will also list precautions such as wearing gloves and making sure you have good ventilation during use of the product. Keep all disinfectants out of the reach of children.

MAINTAIN AND REVISE YOUR PLAN

Take steps to reduce your risk of exposure to the virus that causes COVID-19 during daily activities. CDC provides tips to reduce your exposure and risk of acquiring COVID-19. Reducing exposure to yourself and others is a shared responsibility. Continue to update your plan based on updated guidance and your current circumstances.

Continue routine cleaning and disinfecting

Routine cleaning and disinfecting are an important part of reducing the risk of exposure to COVID-19. Normal routine cleaning with soap and water alone can reduce risk of exposure and is a necessary step before you disinfect dirty surfaces.

Surfaces frequently touched by multiple people, such as door handles, desks, phones, light switches, and faucets, should be cleaned and disinfected at least daily. More frequent cleaning and disinfection may be required based on level of use. For example, certain surfaces and objects in public spaces, such as shopping carts and point of sale keypads, should be cleaned and disinfected before each use.

Consider choosing a different disinfectant if your first choice is in short supply. Make sure there is enough supply of gloves and appropriate personal protective equipment (PPE) based on the label, the amount of product you will need to apply, and the size of the surface you are treating.

Maintain safe behavioral practices

We have all had to make significant behavioral changes to reduce the spread of COVID-19. To reopen America, we will need to continue these practices:

- social distancing (specifically, staying 6 feet away from others when you must go into a shared space)
- frequently washing hands or use alcohol-based (at least 60% alcohol) hand sanitizer when soap and water are not available
- wearing cloth face coverings
- avoiding touching eyes, nose, and mouth
- staying home when sick
- cleaning and disinfecting frequently touched objects and surfaces

It's important to continue to follow federal, state, tribal, territorial, and local guidance for reopening America. Check this resource for updates on COVID-19. This will help you change your plan when situations are updated.

Consider practices that reduce the potential for exposure

It is also essential to change the ways we use public spaces to work, live, and play. We should continue thinking about our safety and the safety of others.

To reduce your exposure to or the risk of spreading COVID-19 after reopening your business or facility, consider whether you need to touch certain surfaces or materials. Consider wiping public surfaces before and after you touch them. These types of behavioral adjustments can help reduce the spread of COVID-19. There are other resources for more information on COVID-19 and how to Prevent Getting Sick.

Another way to reduce the risk of exposure is to make long-term changes to practices and procedures. These could include reducing the use of porous materials used for seating, leaving some doors open to reduce touching by multiple people, opening windows to improve ventilation, or removing objects in your common areas, like coffee creamer containers. There are many other steps that businesses and institutions can put into place to help reduce the spread of COVID-19 and protect their staff and the public. More information can be found at CDC's Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission.

CONCLUSION

Reopening America requires all of us to move forward together using recommended best practices and maintaining safe daily habits in order to reduce our risk of exposure to COVID-19. Remember: We're all in this together!

Reopening Guidance for Cleaning and Disinfecting Public Spaces, Workplaces, Businesses, Schools, and Homes

Updated May 7, 2020 Print

This guidance is intended for all Americans, whether you own a business, run a school, or want to ensure the cleanliness and safety of your home. Reopening America requires all of us to move forward together by practicing social distancing and other daily habits to reduce our risk of exposure to the virus that causes COVID-19. Reopening the country also strongly relies on public health strategies, including increased testing of people for the virus, social distancing, isolation, and keeping track of how someone infected might have infected other people. This plan is part of the larger United States Government plan and focuses on cleaning and disinfecting public spaces, workplaces, businesses, schools, and can also be applied to your home.

Cleaning & Disinfecting Decision Tool

Reopening Guidance for Cleaning and Disinfecting [PDF – 9 pages]

Cleaning and disinfecting public spaces including your workplace, school, home, and business will require you to:

- Develop your plan
- Implement your plan
- Maintain and revise your plan

Reducing the risk of exposure to COVID-19 by cleaning and disinfection is an important part of reopening public spaces that will require careful planning. Every American has been called upon to slow the spread of the virus through social distancing and prevention hygiene, such as frequently washing your hands and wearing masks. Everyone also has a role in making sure our communities are as safe as possible to reopen and remain open.

The virus that causes COVID-19 can be killed if you use the right products. EPA has compiled a list of disinfectant products that can be used against COVID-19, including ready-to-use sprays, concentrates, and wipes. Each product has been shown to be effective against viruses that are harder to kill than viruses like the one that causes COVID-19.

This document provides a general framework for cleaning and disinfection practices. The framework is based on doing the following:

1. Normal routine cleaning with soap and water will decrease how much of the virus is on surfaces and objects, which reduces the risk of exposure.
2. Disinfection using EPA-approved disinfectants against COVID-19 can also help reduce the risk. Frequent disinfection of surfaces and objects touched by multiple people is important.
3. When EPA-approved disinfectants are not available, alternative disinfectants can be used (for example, 1/3 cup of 5.25%–8.25% bleach added to 1 gallon of water, or 70% alcohol solutions). Do not mix bleach or other cleaning and disinfection products together. This can cause fumes that may be very dangerous to breathe in. Bleach solutions will be effective for disinfection up to 24 hours. Keep all disinfectants out of the reach of children. Read EPA's infographic on how to use these disinfectant products safely and effectively.

Always read and follow the directions on the label to ensure safe and effective use.

- Wear skin protection and consider eye protection for potential splash hazards
- Ensure adequate ventilation
- Use no more than the amount recommended on the label
- Use water at room temperature for dilution (unless stated otherwise on the label)
- Avoid mixing chemical products
- Label diluted cleaning solutions
- Store and use chemicals out of the reach of children and pets

You should never eat, drink, breathe or inject these products into your body or apply directly to your skin as they can cause serious harm. Do not wipe or bathe pets with these products or any other products that are not approved for animal use.

See EPA's 6 steps for Safe and Effective Disinfectant Use .

Special considerations should be made for people with asthma and they should not be present when cleaning and disinfecting is happening as this can trigger asthma exacerbations. Learn more about reducing asthma triggers.

Links to specific recommendations for many public spaces that use this framework, can be found at the end of this document.

It's important to continue to follow federal, state, tribal, territorial, and local guidance for reopening America.

A Few Important Reminders about Coronaviruses and Reducing the Risk of Exposure:

- Coronaviruses on surfaces and objects naturally die within hours to days. Warmer temperatures and exposure to sunlight will reduce the time the virus survives on surfaces and objects.
- Normal routine cleaning with soap and water removes germs and dirt from surfaces. It lowers the risk of spreading COVID-19 infection.
- Disinfectants kill germs on surfaces. By killing germs on a surface after cleaning, you can further lower the risk of spreading infection. EPA-approved disinfectants are an important part of reducing the risk of exposure to COVID-19. If disinfectants on this list are in short supply, alternative disinfectants can be used (for example, 1/3 cup of 5.25%–8.25% bleach added to 1 gallon of water, or 70% alcohol solutions). Bleach solutions will be effective for disinfection up to 24 hours.
- Store and use disinfectants in a responsible and appropriate manner according to the label. Do not mix bleach or other cleaning and disinfection products together–this can cause fumes that may be very dangerous to breathe in. Keep all disinfectants out of the reach of children.
- Do not overuse or stockpile disinfectants or other supplies. This can result in shortages of appropriate products for others to use in critical situations.
- Always wear gloves appropriate for the chemicals being used when you are cleaning and disinfecting. Additional personal protective equipment (PPE) may be needed based on setting and product. For more information, see CDC's website on Cleaning and Disinfection for Community Facilities.
- Practice social distancing, wear facial coverings, and follow proper prevention hygiene, such as washing your hands frequently and using alcohol-based (at least 60% alcohol) hand sanitizer when soap and water are not available.

If you oversee staff in a workplace, your plan should include considerations about the safety of custodial staff and other people who are carrying out the cleaning or disinfecting. These people are at increased risk of being exposed to the virus and to any toxic effects of the cleaning chemicals. These staff should wear appropriate PPE for cleaning and disinfecting. To protect your staff and to ensure that the products are used effectively, staff should be instructed on how to apply the disinfectants according to the label. For more information on concerns related to cleaning staff, visit the Occupational Safety and Health Administration's website on Control and Prevention.

Develop Your Plan

Evaluate your workplace, school, home, or business to determine what kinds of surfaces and materials make up that area. Most surfaces and objects will just need normal routine cleaning. Frequently touched surfaces and objects like light switches and doorknobs will need to be cleaned and then disinfected to further reduce the risk of germs on surfaces and objects.

- First, clean the surface or object with soap and water.
- Then, disinfect using an EPA-approved disinfectant .
- If an EPA-approved disinfectant is unavailable, you can use 1/3 cup of 5.25%–8.25% bleach added to 1 gallon of water, or 70% alcohol solutions to disinfect. Do not mix bleach or other cleaning and disinfection products together. Bleach solutions will be effective for disinfection up to 24 hours. Find additional information at CDC's website on Cleaning and Disinfecting Your Facility.

You should also consider what items can be moved or removed completely to reduce frequent handling or contact from multiple people. Soft and porous materials, such as area rugs and seating, may be removed or stored to reduce the challenges with cleaning and disinfecting them. Find additional reopening guidance for cleaning and disinfecting in the Reopening Decision Tool .

It is critical that your plan includes how to maintain a cleaning and disinfecting strategy after reopening. Develop a flexible plan with your staff or family, adjusting the plan as federal, state, tribal, territorial, or local guidance is updated and if your specific circumstances change.

Determine what needs to be cleaned

Some surfaces only need to be cleaned with soap and water. For example, surfaces and objects that are not frequently touched should be cleaned and do not require additional disinfection. Additionally, disinfectants should typically not be applied on items used by children, especially any items that children might put in their mouths. Many disinfectants are toxic when swallowed. In a household setting, cleaning toys and other items used by children with soap and water is usually sufficient. Find more information on cleaning and disinfection toys and other surfaces in the childcare program setting at CDC's Guidance for Childcare Programs that Remain Open.

These questions will help you decide which surfaces and objects will need normal routine cleaning.

Is the area outdoors?

Outdoor areas generally require normal routine cleaning and do not require disinfection. Spraying disinfectant on sidewalks and in parks is not an efficient use of disinfectant supplies and has not been proven to reduce the risk of COVID-19 to the public. You should maintain existing cleaning and hygiene practices for outdoor areas.

The targeted use of disinfectants can be done effectively, efficiently and safely on outdoor hard surfaces and objects frequently touched by multiple people. Certain outdoor areas and facilities, such as bars and restaurants, may have additional requirements. More information can be found on FDA's website on Food Safety and the Coronavirus Disease 2019 (COVID-19) .

There is no evidence that the virus that causes COVID-19 can spread directly to humans from water in pools, hot tubs or spas, or water play areas. Proper operation, maintenance, and disinfection (for example, with chlorine or bromine) of pools, hot tubs or spas, and water playgrounds should kill the virus that causes COVID-19. However, there are additional concerns with outdoor areas that may be maintained less frequently, including playgrounds, or other facilities located within local, state, or national parks. For more information, visit CDC's website on Visiting Parks & Recreational Facilities.

Has the area been unoccupied for the last 7 days?

If your workplace, school, or business has been unoccupied for 7 days or more, it will only need your normal routine cleaning to reopen the area. This is because the virus that causes COVID-19 has not been shown to survive on surfaces longer than this time.

There are many public health considerations, not just COVID-19 related, when reopening public buildings and spaces that have been closed for extended periods. For example, take measures to ensure the safety of your building water system. It is not necessary to clean ventilation systems, other than routine maintenance, as part of reducing risk of corona viruses. For healthcare facilities, additional guidance is provided on CDC's Guidelines for Environmental Infection Control in Health-Care Facilities .

Determine what needs to be disinfected

Following your normal routine cleaning, you can disinfect frequently touched surfaces and objects using a product from EPA's list of approved products that are effective against COVID-19.

These questions will help you choose appropriate disinfectants.

Are you cleaning or disinfecting a hard and non-porous material or item like glass, metal, or plastic?

Consult EPA's list of approved products for use against COVID-19 . This list will help you determine the most appropriate disinfectant for the surface or object. You can use diluted household bleach solutions if appropriate for the surface. Pay special attention to the personal protective equipment (PPE) that may be needed to safely apply the disinfectant and the manufacturer's recommendations concerning any additional hazards. Keep all disinfectants out of the reach of children. Please visit CDC's website on How to Clean and Disinfect for additional details and warnings.

Examples of frequently touched surfaces and objects that will need routine disinfection following reopening are:

- tables,
- doorknobs,
- light switches,
- countertops,
- handles,
- desks,
- phones,
- keyboards,
- toilets,
- faucets and sinks,
- gas pump handles,
- touch screens, and
- ATM machines

Each business or facility will have different surfaces and objects that are frequently touched by multiple people. Appropriately disinfect these surfaces and objects. For example, transit stations have specific guidance for application of cleaning and disinfection.

Are you cleaning or disinfecting a soft and porous material or items like carpet, rugs, or seating in areas?

Soft and porous materials are generally not as easy to disinfect as hard and non-porous surfaces. EPA has listed a limited number of products approved for disinfection for use on soft and porous materials . Soft and porous materials that are not frequently touched should only be cleaned or laundered, following the directions on the item's label, using the warmest appropriate water setting. Find more information on CDC's website on Cleaning and Disinfecting Your Facility for developing strategies for dealing with soft and porous materials.

Consider the resources and equipment needed

Keep in mind the availability of cleaning and disinfection products and appropriate PPE. Always wear gloves appropriate for the chemicals being used for routine cleaning and disinfecting. Follow the directions on the disinfectant label for additional PPE needs. In specific instances, personnel with specialized training and equipment may be required to apply certain disinfectants such as fumigants or fogs. For more information on appropriate PPE for cleaning and disinfection, see CDC's website on Cleaning and Disinfection for Community Facilities.

Implement Your Plan

Once you have a plan, it's time to take action. Read all manufacturer's instructions for the cleaning and disinfection products you will use. Put on your gloves and other required personal protective equipment (PPE) to begin the process of cleaning and disinfecting.

Clean visibly dirty surfaces with soap and water

Clean surfaces and objects using soap and water prior to disinfection. Always wear gloves appropriate for the chemicals being used for routine cleaning and disinfecting. Follow the directions on the disinfectant label for additional PPE needs. When you finish cleaning, remember to wash hands thoroughly with soap and water.

Clean or launder soft and porous materials like seating in an office or coffee shop, area rugs, and carpets. Launder items according to the manufacturer's instructions, using the warmest temperature setting possible and dry items completely.

Use the appropriate cleaning or disinfectant product

EPA approved disinfectants , when applied according to the manufacturer's label, are effective for use against COVID-19. Follow the instructions on the label for all cleaning and disinfection products for concentration, dilution, application method, contact time and any other special considerations when applying.

Always follow the directions on the label

Follow the instructions on the label to ensure safe and effective use of the product. Many product labels recommend keeping the surface wet for a specific amount of time. The label will also list precautions such as wearing gloves and making sure you have good ventilation during use of the product. Keep all disinfectants out of the reach of children.

Maintain and Revise Your Plan

Take steps to reduce your risk of exposure to the virus that causes COVID-19 during daily activities. CDC provides tips to reduce your exposure and risk of acquiring COVID-19. Reducing exposure to yourself and others is a shared responsibility. Continue to update your plan based on updated guidance and your current circumstances.

Continue routine cleaning and disinfecting

Routine cleaning and disinfecting are an important part of reducing the risk of exposure to COVID-19. Normal routine cleaning with soap and water alone can reduce risk of exposure and is a necessary step before you disinfect dirty surfaces.

Surfaces frequently touched by multiple people, such as door handles, desks, phones, light switches, and faucets, should be cleaned and disinfected at least daily. More frequent cleaning and disinfection may be required based on level of use. For example, certain surfaces and objects in public spaces, such as shopping carts and point of sale keypads, should be cleaned and disinfected before each use.

Consider choosing a different disinfectant if your first choice is in short supply. Make sure there is enough supply of gloves and appropriate personal protective equipment (PPE) based on the label, the amount of product you will need to apply, and the size of the surface you are treating.

Maintain safe behavioral practices

We have all had to make significant behavioral changes to reduce the spread of COVID-19. To reopen America, we will need to continue these practices:

- social distancing (specifically, staying 6 feet away from others when you must go into a shared space)
- frequently washing hands or use alcohol-based (at least 60% alcohol) hand sanitizer when soap and water are not available
- wearing masks
- avoiding touching eyes, nose, and mouth
- staying home when sick
- cleaning and disinfecting frequently touched objects and surfaces

It's important to continue to follow federal, state, tribal, territorial, and local guidance for reopening America. Check this resource for updates on COVID-19 . This will help you change your plan when situations are updated.

Consider practices that reduce the potential for exposure

It is also essential to change the ways we use public spaces to work, live, and play. We should continue thinking about our safety and the safety of others.

To reduce your exposure to or the risk of spreading COVID-19 after reopening your business or facility, consider whether you need to touch certain surfaces or materials. Consider wiping public surfaces before and after you touch them. These types of behavioral adjustments can help reduce the spread of COVID-19. There are other resources for more information on COVID-19 and how to Prevent Getting Sick.

Another way to reduce the risk of exposure is to make long-term changes to practices and procedures. These could include reducing the use of porous materials used for seating, leaving some doors open to reduce touching by multiple people, opening windows to improve ventilation, or removing objects in your common areas, like coffee creamer containers. There are many other steps that businesses and institutions can put into place to help reduce the spread of COVID-19 and protect their staff and the public. More information can be found at CDC's Implementation of Mitigation Strategies for Communities with Local COVID-19 Transmission .

Conclusion

Reopening America requires all of us to move forward together using recommended best practices and maintaining safe daily habits in order to reduce our risk of exposure to COVID-19. Remember: We're all in this together!

Cleaning and Disinfecting Your Facility

Disinfecting Your Facility

Everyday Steps, Steps When Someone is Sick, and Considerations for Employers

Updated July 28, 2020 Print

How to clean and disinfect

Clean

- **Wear disposable gloves** to clean and disinfect.
- **Clean surfaces using soap and water, then use disinfectant.**
- Cleaning with soap and water **reduces number of germs, dirt and impurities** on the surface. **Disinfecting kills germs** on surfaces.
- **Practice routine cleaning** of frequently touched surfaces.
  - More frequent cleaning and disinfection may be required based on level of use.
  - Surfaces and objects in public places, such as shopping carts and point of sale keypads should be cleaned and disinfected before each use.
- **High touch surfaces include:**
  - Tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets, sinks, etc.

Disinfect

- **Disinfect with a household disinfectant on** List N: Disinfectants for use against SARs-CoV-2 , the virus that causes COVID 19.

Follow the instructions on the label to ensure safe and effective use of the product.
Many products recommend:

- Keeping surface wet for a period of time (see product label).
- Precautions such as wearing gloves and making sure you have good ventilation during use of the product.

Always read and follow the directions on the label to ensure safe and effective use.

- Wear skin protection and consider eye protection for potential splash hazards
- Ensure adequate ventilation
- Use no more than the amount recommended on the label
- Use water at room temperature for dilution (unless stated otherwise on the label)
- Avoid mixing chemical products
- Label diluted cleaning solutions
- Store and use chemicals out of the reach of children and pets

You should never eat, drink, breathe or inject these products into your body or apply directly to your skin as they can cause serious harm. Do not wipe or bathe pets with these products or any other products that are not approved for animal use.

See EPA's 6 steps for Safe and Effective Disinfectant Use

Special considerations should be made for people with asthma and they should not be present when cleaning and disinfecting is happening as this can trigger asthma exacerbations. Learn more about reducing asthma triggers.

- If products on List N are not available, **diluted household bleach solutions** can be used if appropriate for the surface. Unexpired household bleach will be effective against coronaviruses when properly diluted.
  - Use bleach containing 5.25%–8.25% sodium hypochlorite. Do not use a bleach product if the percentage is not in this range or is not specified.
  - Follow the manufacturer's application instructions for the surface, ensuring a contact time of at least 1 minute.
  - Ensure proper ventilation during and after application.
  - Check to ensure the product is not past its expiration date.
  - Never mix household bleach with ammonia or any other cleanser. This can cause fumes that may be very dangerous to breathe in.
- **Prepare a bleach solution** by mixing:
  - 5 tablespoons (1/3rd cup) of 5.25%–8.25% bleach per gallon of room temperature water OR
  - 4 teaspoons of 5.25%–8.25% bleach per quart of room temperature water
- Bleach solutions will be effective for disinfection up to 24 hours.
- **Alcohol solutions with at least 70% alcohol may also be used.**

Soft surfaces

For soft surfaces such as carpeted floor, rugs, and drapes

- **Clean the surface using soap and water** or with cleaners appropriate for use on these surfaces.
- **Launder items** (if possible) according to the manufacturer's instructions.Use the warmest appropriate water setting and dry items completely.

  OR

- Disinfect with a household disinfectant on List N: Disinfectants for use against SARs-CoV-2 .
- Vacuum as usual.

Electronics

For electronics, such as tablets, touch screens, keyboards, remote controls, and ATM machines

- Consider putting a **wipeable cover** on electronics.
- **Follow manufacturer's instruction** for cleaning and disinfecting.
  - If no guidance, **use alcohol-based wipes or sprays containing at least 70% alcohol**. Dry surface thoroughly.

Laundry

For clothing, towels, linens and other items

- Launder items according to the manufacturer's instructions. Use the warmest appropriate water setting and dry items completely.
- **Wear disposable gloves** when handling dirty laundry from a person who is sick.
- Dirty laundry from a person who is sick can be washed with other people's items.
- **Do not shake** dirty laundry.
- Clean and **disinfect clothes hampers** according to guidance above for surfaces.
- Remove gloves, and wash hands right away.

Cleaning and disinfecting your building or facility if someone is sick

- **Close off areas** used by the person who is sick.
  - Companies do not necessarily need to close operations, if they can close off affected areas.
- **Open outside doors and windows** to increase air circulation in the area.
- **Wait 24 hours** before you clean or disinfect. If 24 hours is not feasible, wait as long as possible.
- Clean and disinfect **all areas used by the person who is sick**, such as offices, bathrooms, common areas, shared electronic equipment like tablets, touch screens, keyboards, remote controls, and ATM machines.
- Vacuum the space if needed. Use a vacuum equipped with high-efficiency particulate air (HEPA) filter, if available.
  - Do not vacuum a room or space that has people in it. Wait until the room or space is empty to vacuum, such as at night, for common spaces, or during the day for private rooms.
  - Wear disposable gloves to clean and disinfect. For soft (porous) surfaces such as carpeted floors or rugs, clean the surface with detergents or cleaners appropriate for use on these surfaces, according to the textile's label. After cleaning, disinfect with an appropriate EPA-registered disinfectant on List N: Disinfectants for use against SARS-CoV-2 . Soft and porous materials, like carpet, are generally not as easy to disinfect as hard and non-porous surfaces. EPA has listed a limited number of products approved for disinfection for use on soft and porous materials on List N. Follow the disinfectant manufacturer's safety instructions (such as wearing gloves and ensuring adequate ventilation), concentration level, application method and contact time. Allow sufficient drying time if vacuum is not intended for wet surfaces.
  - Temporarily turn off in-room, window-mounted, or on-wall recirculation HVAC to avoid contamination of the HVAC units.
  - Do NOT deactivate central HVAC systems. These systems tend to provide better filtration capabilities and introduce outdoor air into the areas that they serve.
  - Consider temporarily turning off room fans and the central HVAC system that services the room or space, so that particles that escape from vacuuming will not circulate throughout the facility.
- Once area has been **appropriately disinfected**, it **can be opened for use**.
  - **Workers without close contact** with the person who is sick can return to work immediately after disinfection.
- If **more than 7 days** since the person who is sick visited or used the facility, additional cleaning and disinfection is not necessary.
  - Continue routing cleaning and disinfection. This includes everyday practices that businesses and communities normally use to maintain a healthy environment.

Cleaning and disinfecting outdoor areas

- Outdoor areas, like **playgrounds in schools and parks** generally require **normal routine cleaning**, but **do not require disinfection.**
  - Do not spray disinfectant on outdoor playgrounds- it is not an efficient use of supplies and is not proven to reduce risk of COVID-19 to the public.
  - High touch surfaces made of plastic or metal, such as grab bars and railings should be cleaned routinely.

- Cleaning and disinfection of wooden surfaces (play structures, benches, tables) or groundcovers (mulch, sand) is not recommended.

- **Sidewalks and roads should not be disinfected.**
  - Spread of COVID-19 from these surfaces is very low and disinfection is not effective.

When cleaning

- **Regular cleaning staff** can clean and disinfect community spaces.
  - Ensure they are trained on appropriate use of cleaning and disinfection chemicals.
- **Wear disposable gloves and gowns for all tasks in the cleaning process, including handling trash**.
  - Additional personal protective equipment (PPE) might be required based on the cleaning/disinfectant products being used and whether there is a risk of splash.
  - Gloves and gowns should be removed carefully to avoid contamination of the wearer and the surrounding area.
- **Wash your hands often** with soap and water for 20 seconds.
  - Always wash immediately after removing gloves and after contact with a person who is sick.
  - Hand sanitizer: If soap and water are not available and hands are not visibly dirty, an alcohol-based hand sanitizer that contains at least 60% alcohol may be used. However, if hands are visibly dirty, always wash hands with soap and water.

Always read and follow the directions on the label to ensure safe and effective use.

- Keep hand sanitizers away from fire or flame
- For children under six years of age, hand sanitizer should be used with adult supervision
- Always store hand sanitizer out of reach of children and pets

See FDA's Tips for Safe Sanitizer Use and CDC's Hand Sanitizer Use Considerations

- **Additional key times to wash hands** include:
  - After blowing one's nose, coughing, or sneezing.
  - After using the restroom.
  - Before eating or preparing food.
  - After contact with animals or pets.
  - Before and after providing routine care for another person who needs assistance (e.g., a child).

Additional considerations for employers

- **Educate workers** performing cleaning, laundry, and trash pick-up to recognize the symptoms of COVID-19.
- Provide instructions on what to do if they develop symptoms within 14 days after their last possible exposure to the virus.
- **Develop policies for worker protection and provide training** to all cleaning staff on site prior to providing cleaning tasks.
  - Training should include when to use PPE, what PPE is necessary, how to properly don (put on), use, and doff (take off) PPE, and how to properly dispose of PPE.
- Ensure workers are trained on the hazards of the cleaning chemicals used in the workplace in accordance with OSHA's Hazard Communication standard (29 CFR 1910.1200).
- **Comply with OSHA's standards** on Bloodborne Pathogens (29 CFR 1910.1030), including proper disposal of regulated waste, and PPE (29 CFR 1910.132).

Alternative disinfection methods

- The efficacy of alternative disinfection methods, such as ultrasonic waves, high intensity UV radiation, and LED blue light against COVID-19 virus is not known.
  - EPA does not routinely review the safety or efficacy of pesticidal devices, such as UV lights, LED lights, or ultrasonic devices. Therefore, EPA cannot confirm whether, or under what circumstances, such products might be effective against the spread of COVID-19.
- CDC does not recommend the use of sanitizing tunnels. There is no evidence that they are effective in reducing the spread of COVID-19. Chemicals used in sanitizing tunnels could cause skin, eye, or respiratory irritation or damage.
- CDC only recommends use of the surface disinfectants identified on List N against the virus that causes COVID-19.

For facilities that house people overnight

- Follow CDC's guidance for colleges and universities. Work with state and local health officials to determine the best way to isolate people who are sick and if temporary housing is needed.
- For guidance on cleaning and disinfecting the bedroom/bathroom for someone who is sick, review CDC's guidance on disinfecting your home if someone is sick.

Interim Guidance on Management of Coronavirus Disease 2019 (COVID-19) in Correctional and Detention Facilities

Updated Oct. 21, 2020 Print

This interim guidance is based on what is currently known about the transmission and severity of coronavirus disease 2019 (COVID-19) as of the date of posting, October 7, 2020.

The US Centers for Disease Control and Prevention (CDC) will update this guidance as needed and as additional information becomes available. Please check the CDC website periodically for updated interim guidance.

This document provides interim guidance specific for correctional facilities and detention centers during the outbreak of COVID-19, to ensure continuation of essential public services and protection of the health and safety of incarcerated and detained persons, staff, and visitors. Recommendations may need to be revised as more information becomes available.

A revision was made 10/21/2020 to reflect the following:

- Updated language for the close contact definition.

A revision was made 10/7/2020 to reflect the following:

- Updated criteria for releasing individuals with confirmed COVID-19 from medical isolation (symptom-based approach).
- Added link to CDC Guidance for Performing Broad-Based Testing for SARS-CoV-2 in Congregate Settings
- Reorganized information on Quarantine into 4 sections: Contact Tracing, Testing Close Contacts, Quarantine Practices, and Cohorted Quarantine for Multiple Close Contacts

A revision was made 7/14/20 to reflect the following:

- Added testing and contact tracing considerations for incarcerated/detained persons (including testing newly incarcerated or detained persons at intake; testing close contacts of cases; repeated testing of persons in cohorts of quarantined close contacts; testing before release). Linked to more detailed Interim Considerations for SARS-CoV-2 Testing in Correctional and Detention Facilities.
- Added recommendation to consider testing and a 14-day quarantine for individuals preparing for release or transfer to another facility.
- Added recommendation that confirmed COVID-19 cases may be medically isolated as a cohort. (Suspected cases should be isolated individually.)
- Reduced recommended frequency of symptom screening for quarantined individuals to once per day (from twice per day).
- Added recommendation to ensure that PPE donning/doffing stations are set up directly outside spaces requiring PPE. Train staff to move from areas of lower to higher risk of exposure if they must re-use PPE due to shortages.
- Added recommendation to organize staff assignments so that the same staff are assigned to the same areas of the facility over time, to reduce the risk of transmission through staff movements.
- Added recommendation to suspend work release programs, especially those within other congregate settings, when there is a COVID-19 case in the correctional or detention facility.
- Added recommendation to modify work details so that they only include incarcerated/detained persons from a single housing unit.
- Added considerations for safely transporting individuals with COVID-19 or their close contacts.

- Added considerations for release and re-entry planning in the context of COVID-19.

Intended Audience

This document is intended to provide guiding principles for healthcare and non-healthcare administrators of correctional and detention facilities (including but not limited to federal and state prisons, local jails, and detention centers), law enforcement agencies that have custodial authority for detained populations (i.e., U.S. Immigration and Customs Enforcement and U.S. Marshals Service), and their respective health departments, to assist in preparing for potential introduction, spread, and mitigation of SARS-CoV-2 (the virus that causes Coronavirus Disease 2019, or COVID-19) in their facilities. In general, the document uses terminology referring to correctional environments but can also be applied to civil and pre-trial detention settings.

This guidance will not necessarily address every possible custodial setting and may not use legal terminology specific to individual agencies' authorities or processes.

The guidance may need to be adapted based on individual facilities' physical space, staffing, population, operations, and other resources and conditions. Facilities should contact CDC or their state, local, territorial, and/or tribal public health department if they need assistance in applying these principles or addressing topics that are not specifically covered in this guidance.

This guidance will not necessarily address every possible custodial setting and may not use legal terminology specific to individual agencies' authorities or processes.

The guidance may need to be adapted based on individual facilities' physical space, staffing, population, operations, and other resources and conditions. Facilities should contact CDC or their state, local, territorial, and/or tribal public health department if they need assistance in applying these principles or addressing topics that are not specifically covered in this guidance.

Guidance Overview

The guidance below includes detailed recommendations on the following topics related to COVID-19 in correctional and detention settings:

- ✓ Operational and communications preparations for COVID-19
- ✓ Enhanced cleaning/disinfecting and hygiene practices
- ✓ Social distancing strategies to increase space between individuals in the facility
- ✓ Strategies to limit transmission from visitors
- ✓ Infection control, including recommended personal protective equipment (PPE) and potential alternatives during PPE shortages
- ✓ Verbal screening and temperature check protocols for incoming incarcerated/detained individuals, staff, and visitors
- ✓ Testing considerations for SARS-CoV-2
- ✓ Medical isolation of individuals with confirmed and suspected COVID-19 and quarantine of close contacts, including considerations for cohorting when individual spaces are limited
- ✓ Healthcare evaluation for individuals with suspected COVID-19
- ✓ Clinical care for individuals with confirmed and suspected COVID-19
- ✓ Considerations for people who are at increased risk for severe illness from COVID-19

Definitions of Commonly Used Terms

Close contact of someone with COVID-19 – Someone who was within 6 feet of an infected person for a cumulative total of 15 minutes or more over a 24-hour period* starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to test specimen collection) until the time the patient is isolated.

** Individual exposures added together over a 24-hour period (e.g., three 5-minute exposures for a total of 15 minutes). Data are limited, making it difficult to precisely define "close contact;" however, 15 cumulative minutes of exposure at a distance of 6 feet or less can be used as an operational definition for contact investigation. Factors to consider when defining close contact include proximity (closer distance likely increases exposure risk), the duration of exposure (longer exposure time likely increases exposure risk), whether the infected individual has symptoms (the period around onset of symptoms is associated with the highest levels of viral shedding), if the infected person was likely to generate respiratory aerosols (e.g., was coughing, singing, shouting), and other environmental factors (crowding, adequacy of ventilation, whether exposure was indoors or outdoors). Because the general public has not received training on proper selection and use of respiratory PPE, such as an N95, the determination of close contact should generally be made irrespective of whether the contact was wearing respiratory PPE. At this time, differential determination of close contact for those using fabric face coverings is not recommended.*

Cohorting – In this guidance, cohorting refers to the practice of isolating multiple individuals with laboratory-confirmed COVID-19 together or quarantining close contacts of an infected person together as a group due to a limited number of individual cells. While cohorting those with confirmed COVID-19 is acceptable, cohorting individuals with suspected COVID-19 is not recommended due to high risk of transmission from infected to uninfected individuals. See Quarantine and Medical Isolation sections below for specific details about ways to implement cohorting as a harm reduction strategy to minimize the risk of disease spread and adverse health outcomes.

Community transmission of SARS-CoV-2 – Community transmission of SARS-CoV-2 occurs when individuals are exposed to the virus through contact with someone in their local community, rather than through travel to an affected location. When community transmission is occurring in a particular area, correctional facilities and detention centers are more likely to start seeing infections inside their walls. Facilities should consult with local public health departments if assistance is needed to determine how to define "local community" in the context of SARS-CoV-2 spread. However, because all states have reported cases, all facilities should be vigilant for introduction of the virus into their populations.

Confirmed vs. suspected COVID-19 – A person has **confirmed COVID-19** when they have received a positive result from a COVID-19 viral test (antigen or PCR test) but they may or may not have symptoms. A person has **suspected COVID-19** if they show symptoms of COVID-19 but either have not been tested via a viral test or are awaiting test results. If their test result is positive, suspected COVID-19 is reclassified as confirmed COVID-19.

Incarcerated/detained persons – For the purpose of this document, "incarcerated/detained persons" refers to persons held in a prison, jail, detention center, or other custodial setting. The term includes those who have been sentenced (i.e., in prisons) as well as those held for pre-trial (i.e., jails) or civil purposes (i.e., detention centers). Although this guidance does not specifically reference individuals in every type of custodial setting (e.g., juvenile facilities, community confinement facilities), facility administrators can adapt this guidance to apply to their specific circumstances as needed.

Masks – Masks cover the nose and mouth and are intended to help prevent people who have the virus from transmitting it to others, even if they do not have symptoms. CDC recommends wearing cloth masks in public settings where social distancing measures are difficult to maintain. Masks are recommended as a simple barrier to help prevent respiratory droplets from traveling into the air and onto other people when the person wearing the mask coughs, sneezes, talks, or raises their voice. This is called source control. If everyone wears a mask in congregate settings, the risk of exposure to SARS-CoV-2 can be reduced. Anyone who has trouble breathing or is unconscious, incapacitated, younger than 2 years of age or otherwise unable to remove the mask without assistance should not wear a mask (for more details see How to Wear Masks). **CDC does not recommend use of masks for source control if they have an exhalation valve or vent).** Individuals working under conditions that require PPE should not use a cloth mask when a surgical mask or N95 respirator is indicated (see Table 1). Surgical masks and N95 respirators should be reserved for situations where the wearer needs PPE. Detailed recommendations for wearing a mask can be found here.

Medical isolation – Medical isolation refers to separating someone with confirmed or suspected COVID-19 infection to prevent their contact with others to reduce the risk of transmission. Medical isolation ends when the individual meets pre-established criteria for release from isolation, in consultation with clinical providers and public health officials. In this context, isolation

does NOT refer to punitive isolation for behavioral infractions within the custodial setting. Staff are encouraged to use the term “medical isolation” to avoid confusion, and should ensure that the conditions in medical isolation spaces are distinct from those in punitive isolation.

Quarantine – Quarantine refers to the practice of separating individuals who have had close contact with someone with COVID-19 to determine whether they develop symptoms or test positive for the disease. Quarantine reduces the risk of transmission if an individual is later found to have COVID-19. Quarantine for COVID-19 should last for 14 days after the exposure has ended. Ideally, each quarantined individual should be housed in a single cell with solid walls and a solid door that closes. If symptoms develop during the 14-day period, and/or a quarantined individual receives a positive viral test result for SARS-CoV-2, the individual should be placed under medical isolation and evaluated by a healthcare professional. If symptoms do not develop during the 14-day period and the individual does not receive a positive viral test result for SARS-CoV-2, quarantine restrictions can be lifted. (NOTE: Some facilities may also choose to implement a “routine intake quarantine,” in which individuals newly incarcerated/detained are housed separately or as a group for 14 days before being integrated into general housing. This type of quarantine is conducted to prevent introduction of SARS-CoV-2 from incoming individuals whose exposure status is unknown, rather than in response to a known exposure to someone infected with SARS-CoV-2.)

Social distancing – Social distancing is the practice of increasing the space between individuals and decreasing their frequency of contact to reduce the risk of spreading a disease (ideally to maintain at least 6 feet between all individuals, even those who are asymptomatic). Social distancing strategies can be applied on an individual level (e.g., avoiding physical contact), a group level (e.g., canceling group activities where individuals would be in close contact), and an operational level (e.g., rearranging chairs in the dining hall to increase distance between them). Social distancing can be challenging to practice in correctional and detention environments; examples of potential social distancing strategies for correctional and detention facilities are detailed in the guidance below. Social distancing is vital for the prevention of respiratory diseases such as COVID-19, especially because people who have been infected with SARS-CoV-2 but do not have symptoms can still spread the infection. Additional information about social distancing, including information on its use to reduce the spread of other viral illnesses, is available in this CDC publication [900 KB, 36 pages].

Staff – In this document, “staff” refers to all public or private-sector employees (e.g., contracted healthcare or food service workers) working within a correctional facility. Except where noted, “staff” does not distinguish between healthcare, custody, and other types of staff, including private facility operators.

Symptoms – Symptoms of COVID-19 include cough, shortness of breath or difficulty breathing, fever, chills, muscle pain, sore throat, and new loss of taste or smell. This list is not exhaustive. Other less common symptoms have been reported, including nausea and vomiting. Like other respiratory infections, COVID-19 can vary in severity from mild to severe, and pneumonia, respiratory failure, and death are possible. COVID-19 is a novel disease, therefore the full range of signs and symptoms, the clinical course of the disease, and the individuals and populations at increased risk for severe illness are not yet fully understood. Monitor the CDC website for updates on symptoms.

Facilities with Limited Onsite Healthcare Services

Although many large facilities such as prisons and some jails employ onsite healthcare staff and have the capacity to evaluate incarcerated/detained persons for potential illness within a dedicated healthcare space, many smaller facilities do not. Some of these facilities have access to on-call healthcare staff or providers who visit the facility every few days. Others have neither onsite healthcare capacity nor onsite medical isolation/quarantine space and must transfer ill patients to other correctional or detention facilities or local hospitals for evaluation and care.

The majority of the guidance below is designed to be applied to any correctional or detention facility, either as written or with modifications based on a facility’s individual structure and resources. However, topics related to healthcare evaluation and clinical care of persons with confirmed and suspected COVID-19 infection and their close contacts may not apply directly to facilities with limited or no onsite healthcare services. It will be especially important for these types of facilities to coordinate closely with their state, local, tribal, and/or territorial health department when they identify incarcerated/detained persons or staff with confirmed or suspected COVID-19, in order to ensure effective medical isolation and quarantine, necessary medical evaluation and care, and medical transfer if needed. The guidance makes note of strategies tailored to facilities without onsite healthcare where possible.

Note that all staff in any sized facility, regardless of the presence of onsite healthcare services, should observe guidance on recommended PPE in order to ensure their own safety when interacting with persons with confirmed or suspected COVID-19

infection.

COVID-19 Guidance for Correctional Facilities

Guidance for correctional and detention facilities is organized into 3 sections: Operational Preparedness, Prevention, and Management of COVID-19. Recommendations across these sections should be applied simultaneously based on the progress of the outbreak in a particular facility and the surrounding community.

- Operational Preparedness. This guidance is intended to help facilities prepare for potential SARS-CoV-2 transmission in the facility. Strategies focus on operational and communications planning, training, and personnel practices.
- Prevention. This guidance is intended to help facilities prevent spread of SARS-CoV-2 within the facility and between the community and the facility. Strategies focus on reinforcing hygiene practices; intensifying cleaning and disinfection of the facility; regular symptom screening for new intakes, visitors, and staff; continued communication with incarcerated/detained persons and staff; social distancing measures; as well as testing symptomatic and asymptomatic individuals in correctional and detention facilities. Refer to the Interim Guidance on Testing for SARS-CoV-2 in Correctional and Detention Facilities for additional considerations regarding testing in correctional and detention settings.
- Management. This guidance is intended to help facilities clinically manage persons with confirmed or suspected COVID-19 inside the facility and prevent further transmission of SARS-CoV-2. Strategies include medical isolation and care of incarcerated/detained persons with COVID-19 (including considerations for cohorting), quarantine and testing of close contacts, restricting movement in and out of the facility, infection control practices for interactions with persons with COVID-19 and their quarantined close contacts or contaminated items, intensified social distancing, and cleaning and disinfecting areas where infected persons spend time.

Operational Preparedness

Administrators can plan and prepare for COVID-19 by ensuring that all persons in the facility know the symptoms of COVID-19 and the importance of reporting those symptoms if they develop. Other essential actions include developing contingency plans for reduced workforces due to absences, coordinating with public health and correctional partners, training staff on proper use of personal protective equipment (PPE) that may be needed in the course of their duties, and communicating clearly with staff and incarcerated/detained persons about these preparations and how they may temporarily alter daily life.

Communication and Coordination

✓ **Develop information-sharing systems with partners.**

- Identify points of contact in relevant state, local, tribal, and/or territorial public health departments before SARS-CoV-2 infections develop. Actively engage with the health department to understand in advance which entity has jurisdiction to implement public health control measures for COVID-19 in a particular correctional or detention facility.
- Create and test communications plans to disseminate critical information to incarcerated/detained persons, staff, contractors, vendors, and visitors as the pandemic progresses.
- Communicate with other correctional facilities in the same geographic area to share information including disease surveillance and absenteeism patterns among staff.
- Where possible, put plans in place with other jurisdictions to prevent individuals with confirmed or suspected COVID-19 and their close contacts from being transferred between jurisdictions and facilities unless necessary for medical evaluation, medical isolation/quarantine, clinical care, extenuating security concerns, release, or to prevent overcrowding.
- Stay informed about updates to CDC guidance via the CDC COVID-19 website as more information becomes known.

✓ **Review existing influenza, all-hazards, and disaster plans, and revise for COVID-19.**

- Train staff on the facility's COVID-19 plan. All personnel should have a basic understanding of COVID-19, how the disease is thought to spread, what the symptoms of the disease are, and what measures are being implemented and can be taken by individuals to prevent or minimize the transmission of SARS-CoV-2.
- Ensure that **separate** physical locations (dedicated housing areas and bathrooms) have been identified to 1) isolate individuals with confirmed COVID-19 (individually or cohorted), 2) isolate individuals with suspected COVID-19 (individually – do not cohort), and 3) quarantine close contacts of those with confirmed or suspected COVID-19

(ideally individually; cohorted if necessary). The plan should include contingencies for multiple locations if numerous infected individuals and/or close contacts are identified and require medical isolation or quarantine simultaneously. See Medical Isolation and Quarantine sections below for more detailed cohorting considerations.

- Facilities without onsite healthcare capacity should make a plan for how they will ensure that individuals with suspected COVID-19 will be isolated, evaluated, tested, and provided necessary medical care.
- Make a list of possible social distancing strategies that could be implemented as needed at different stages of transmission intensity.
- Designate officials who will be authorized to make decisions about escalating or de-escalating response efforts as the disease transmission patterns change.

✓ **Coordinate with local law enforcement and court officials.**

- Identify legally acceptable alternatives to in-person court appearances, such as virtual court, as a social distancing measure to reduce the risk of SARS-CoV-2
- Consider options to prevent overcrowding (e.g., diverting new intakes to other facilities with available capacity, and encouraging alternatives to incarceration and other decompression strategies where allowable).

✓ **Encourage all persons in the facility to take the following actions to protect themselves and others from COVID-19. Post signs throughout the facility and communicate this information verbally on a regular basis. Sample signage and other communications materials are available on the CDC website.** Ensure that materials can be understood by non-English speakers and those with low literacy, and make necessary accommodations for those with cognitive or intellectual disabilities and those who are deaf, blind, or have low-vision.

- **For all:**
  - Practice good cough and sneeze etiquette: Cover your mouth and nose with your elbow (or ideally with a tissue) rather than with your hand when you cough or sneeze, and throw all tissues in the trash immediately after use.
  - Practice good hand hygiene: Regularly wash your hands with soap and water for at least 20 seconds, especially after coughing, sneezing, or blowing your nose; after using the bathroom; before eating; before and after preparing food; before taking medication; and after touching garbage.
  - Wear masks, unless PPE is indicated.
  - Avoid touching your eyes, nose, or mouth without cleaning your hands first.
  - Avoid sharing eating utensils, dishes, and cups.
  - Avoid non-essential physical contact.
- **For incarcerated/detained persons**:
  - the importance of reporting symptoms to staff
  - Social distancing and its importance for preventing COVID-19
  - Purpose of quarantine and medical isolation
- **For staff**:
  - Stay at home when sick
  - If symptoms develop while on duty, leave the facility as soon as possible and follow CDC-recommended steps for persons who are ill with COVID-19 symptoms including self-isolating at home, contacting a healthcare provider as soon as possible to determine whether evaluation or testing is needed, and contacting a supervisor.

Personnel Practices

✓ **Review the sick leave policies of each employer that operates within the facility.**

- Review policies to ensure that they are flexible, non-punitive, and actively encourage staff not to report to work when sick.
- Determine which officials will have the authority to send symptomatic staff home.

✓ **Identify duties that can be performed remotely.** Where possible, allowing staff to work from home can be an effective social distancing strategy to reduce the risk of SARS-CoV-2

✓ **Plan for staff absences.** Staff should stay home when they are sick, or they may need to stay home to care for a sick household member or care for children in the event of school and childcare dismissals.

- Identify critical job functions and plan for alternative coverage.
- Determine minimum levels of staff in all categories required for the facility to function safely. If possible, develop a plan to secure additional staff if absenteeism due to COVID-19 threatens to bring staffing to minimum levels.
- Review CDC guidance on safety practices for critical infrastructure workers (including correctional officers, law enforcement officers, and healthcare workers) who continue to work after a potential exposure to SARS-CoV-2.
- Consider increasing keep on person (KOP) medication orders to cover 30 days in case of healthcare staff shortages.

✓ **Consider offering revised duties to staff who are at increased risk for severe illness from COVID-19.** Persons at increased risk may include older adults and persons of any age with serious underlying medical conditions including lung disease, moderate to severe asthma, heart disease, chronic kidney disease, severe obesity, and diabetes. See CDC's website for a complete list and check regularly for updates as more data become available.

- Consult with occupational health providers to determine whether it would be allowable to reassign duties for specific staff members to reduce their likelihood of exposure to SARS-CoV-2.

✓ **Make plans in advance for how to change staff duty assignments to prevent unnecessary movement between housing units during a COVID-19**

- If there are people with COVID-19 inside the facility, it is **essential** for staff members to maintain a consistent duty assignment in the same area of the facility across shifts to prevent transmission across different facility areas.
- Where feasible, consider the use of telemedicine to evaluate persons with COVID-19 symptoms and other health conditions to limit the movement of healthcare staff across housing units.

✓ **Offer the seasonal influenza vaccine to all incarcerated/detained persons (existing population and new intakes) and staff throughout the influenza season.** Symptoms of COVID-19 are similar to those of influenza. Preventing influenza in a facility can speed the detection of COVID-19 and reduce pressure on healthcare resources.

✓ **Reference the Occupational Safety and Health Administration website for recommendations regarding worker health.**

✓ **Review CDC's guidance for businesses and employers** to identify any additional strategies the facility can use within its role as an employer, or share with others.

Operations, Supplies, and PPE Preparations

✓ **Ensure that sufficient stocks of hygiene supplies, cleaning supplies, PPE, and medical supplies (consistent with the healthcare capabilities of the facility) are on hand and available and have a plan in place to restock as needed.**

- Standard medical supplies for daily clinic needs
- Tissues
- Liquid or foam soap when possible. If bar soap must be used, ensure that it does not irritate the skin and thereby discourage frequent hand washing. Ensure a sufficient supply of soap for each individual.
- Hand drying supplies
- Alcohol-based hand sanitizer containing at least 60% alcohol (where permissible based on security restrictions)
- Cleaning supplies, including EPA-registered disinfectants effective against SARS-CoV-2 , the virus that causes COVID-19
- Recommended PPE (surgical masks, N95 respirators, eye protection, disposable medical gloves, and disposable gowns/one-piece coveralls). See PPE section and Table 1 for more detailed information, including recommendations for extending the life of all PPE categories in the event of shortages, and when surgical masks are acceptable alternatives to N95s. Visit CDC's website for a calculator to help determine rate of PPE usage.

- Cloth face masks for source control
- SARS-CoV-2 specimen collection and testing supplies

✓ **Make contingency plans for possible PPE shortages during the COVID-19 pandemic, particularly for non-healthcare workers.**

- See CDC guidance optimizing PPE supplies.

✓ **Consider relaxing restrictions on allowing alcohol-based hand sanitizer in the secure setting, where security concerns allow.** If soap and water are not available, CDC recommends cleaning hands with an alcohol-based hand sanitizer that contains at least 60% alcohol. Consider allowing staff to carry individual-sized bottles for their personal hand hygiene while on duty, and place dispensers at facility entrances/exits and in PPE donning/doffing stations.

✓ **Provide a no-cost supply of soap to incarcerated/detained persons, sufficient to allow frequent hand washing.** (See Hygiene section below for additional detail regarding recommended frequency and protocol for hand washing.)

- Provide liquid or foam soap where possible. If bar soap must be used, ensure that it does not irritate the skin and thereby discourage frequent hand washing, and ensure that individuals do not share bars of soap.

✓ **If not already in place, employers operating within the facility should establish a respiratory protection program as appropriate, to ensure that staff and incarcerated/detained persons are fit-tested for any respiratory protection they will need within the scope of their responsibilities.**

✓ **Ensure that staff and incarcerated/detained persons are trained to correctly don, doff, and dispose of PPE that they will need to use within the scope of their responsibilities.**

- See Table 1 for recommended PPE for incarcerated/detained persons and staff with varying levels of contact with persons with COVID-19 or their close contacts.
- Visit CDC's website for PPE donning and doffing training videos and job aids [2.9 MB, 3 pages].

✓ **Prepare to set up designated PPE donning and doffing areas outside all spaces where PPE will be used. These spaces should include:**

- A dedicated trash can for disposal of used PPE
- A hand washing station or access to alcohol-based hand sanitizer
- A poster demonstrating correct PPE donning and doffing procedures

✓ Review CDC and EPA guidance for cleaning and disinfecting of the facility.

Prevention

Cases of COVID-19 have been documented in all 50 US states. Correctional and detention facilities can prevent introduction of SARS-CoV-2 and reduce transmission if it is already inside by reinforcing good hygiene practices among incarcerated/detained persons, staff, and visitors (including increasing access to soap and paper towels), intensifying cleaning/disinfection practices, and implementing social distancing strategies.

Because many individuals infected with SARS-CoV-2 do not display symptoms, the virus could be present in facilities before infections are identified. Good hygiene practices, vigilant symptom screening, wearing cloth face masks (if not contraindicated), and social distancing are critical in preventing further transmission.

Testing symptomatic and asymptomatic individuals and initiating medical isolation for suspected and confirmed cases and quarantine for close contacts, can help prevent spread of SARS-CoV-2.

Operations

operations

✓ **Stay in communication with partners about your facility's current situation.**

- State, local, territorial, and/or tribal health departments
- Other correctional facilities

✓ **Communicate with the public about any changes to facility operations, including visitation programs.**

✓ **Limit transfers of incarcerated/detained persons to and from other jurisdictions and facilities unless necessary for medical evaluation, medical isolation/quarantine, clinical care, extenuating security concerns, release, or to prevent overcrowding.**

- **If a transfer is absolutely necessary**:
  - Perform verbal screening and a temperature check as outlined in the Screening section below, before the individual leaves the facility. If an individual does not clear the screening process, delay the transfer and follow the protocol for suspected COVID-19 infection – including giving the individual a cloth face mask (unless contraindicated), if not already wearing one, immediately placing them under medical isolation, and evaluating them for SARS-CoV-2
  - Ensure that the receiving facility has capacity to properly quarantine or isolate the individual upon arrival.
  - See Transportation section below on precautions to use when transporting an individual with confirmed or suspected COVID-19.

✓**Make every possible effort to modify staff assignments to minimize movement across housing units and other areas of the facility.** For example, ensure that the same staff are assigned to the same housing unit across shifts to prevent cross-contamination from units where infected individuals have been identified to units with no infections.

✓ **Consider suspending work release and other programs that involve movement of incarcerated/detained individuals in and out of the facility, especially if the work release assignment is in another congregate setting, such as a food processing plant.**

✓ **Implement lawful alternatives to in-person court appearances where permissible.**

✓ **Where relevant, consider suspending co-pays for incarcerated/detained persons seeking medical evaluation for possible COVID-19 symptoms, to remove possible barriers to symptom reporting.**

✓ **Limit the number of operational entrances and exits to the facility.**

✓ **Where feasible, consider establishing an on-site laundry option for staff so that they can change out of their uniforms, launder them at the facility, and wear street clothes and shoes home.** If on-site laundry for staff is not feasible, encourage them to change clothes before they leave the work site, and provide a location for them to do so. This practice may help minimize the risk of transmitting SARS-CoV-2 between the facility and the community.

Cleaning and Disinfecting Practices

✓ **Even if COVID-19 has not yet been identified inside the facility or in the surrounding community, implement intensified cleaning and disinfecting procedures according to the recommendations below. These measures can help prevent spread of SARS-CoV-2 if introduced, and if already present through asymptomatic infections.**

✓ **Adhere to CDC recommendations for cleaning and disinfection during the COVID-19 response.** Monitor these recommendations for updates.

- Visit the CDC website for a tool to help implement cleaning and disinfection.
- Several times per day, clean and disinfect surfaces and objects that are frequently touched, especially in common areas. Such surfaces may include objects/surfaces not ordinarily cleaned daily (e.g., doorknobs, light switches, sink handles, countertops, toilets, toilet handles, recreation equipment, kiosks, telephones, and computer equipment).
- Staff should clean shared equipment (e.g., radios, service weapons, keys, handcuffs) several times per day and when the use of the equipment has concluded.
- Use household cleaners and EPA-registered disinfectants effective against SARS-CoV-2, the virus that causes COVID-19 as appropriate for the surface

19 as appropriate for the surface.

- Follow label instructions for safe and effective use of the cleaning product, including precautions that should be taken when applying the product, such as wearing gloves and making sure there is good ventilation during use, and around people. Clean according to label instructions to ensure safe and effective use, appropriate product dilution, and contact time. Facilities may consider lifting restrictions on undiluted disinfectants (i.e., requiring the use of undiluted product), if applicable.

✓ **Consider increasing the number of staff and/or incarcerated/detained persons trained and responsible for cleaning common areas to ensure continual cleaning of these areas throughout the day.**

✓ **Ensure adequate supplies to support intensified cleaning and disinfection practices, and have a plan in place to restock rapidly if needed.**

Hygiene

✓ **Encourage all staff and incarcerated/detained persons to wear a cloth face mask as much as safely possible, to prevent transmission of SARS-CoV-2 through respiratory droplets that are created when a person talks, coughs, or sneezes ("source control").**

- Provide masks at no cost to incarcerated/detained individuals and launder them routinely.
- Clearly explain the purpose of masks and when their use may be contraindicated. Because many individuals with COVID-19 do not have symptoms, it is important for everyone to wear masks in order to protect each other: "My mask protects you, your mask protects me."
- Ensure staff know that cloth masks should not be used as a substitute for surgical masks or N95 respirators that may be required based on an individual's scope of duties. Cloth masks are not PPE but are worn to protect others in the surrounding area from respiratory droplets generated by the wearer.
- Surgical masks may also be used as source control but should be conserved for situations requiring PPE.

✓ **Reinforce healthy hygiene practices, and provide and continually restock hygiene supplies throughout the facility, including in bathrooms, food preparation and dining areas, intake areas, visitor entries and exits, visitation rooms and waiting rooms, common areas, medical, and staff-restricted areas (e.g., break rooms).**

✓ **Provide incarcerated/detained persons and staff no-cost access to:**

- **Soap** – Provide liquid or foam soap where possible. If bar soap must be used, ensure that it does not irritate the skin, as this would discourage frequent hand washing, and ensure that individuals are not sharing bars of soap.
- **Running water, and hand drying machines or disposable paper towels** for hand washing
- **Tissues** and (where possible) no-touch trash receptacles for disposal
- Face masks

✓ **Provide alcohol-based hand sanitizer with at least 60% alcohol where permissible based on security restrictions.** Consider allowing staff to carry individual-sized bottles to maintain hand hygiene.

✓ **Communicate that sharing drugs and drug preparation equipment can spread SARS-CoV-2 due to potential contamination of shared items and close contact between individuals.**

Testing for SARS-CoV-2

Correctional and detention facilities are high-density congregate settings that present unique challenges to implementing testing for SARS-CoV-2, the virus that causes COVID-19. Refer to Testing guidance for details regarding testing strategies in correctional and detention settings.

Prevention Practices for Incarcerated/Detained Persons

✓ **Provide cloth face masks (unless contraindicated) and perform pre-intake symptom screening and temperature checks for all new entrants in order to identify and immediately place individuals with symptoms under medical isolation. Screening should take place in an outdoor space prior to entry, in the sally port, or at the point of entry into the facility immediately upon entry, before beginning the intake process.** See Screening section below for the wording of screening questions and a recommended procedure to safely perform a temperature check. Staff performing temperature checks should wear recommended PPE (see PPE section below).

- **If an individual has symptoms of COVID-19:**
  - Require the individual to wear a mask (as much as possible, use cloth masks in order to reserve surgical masks for situations requiring PPE). Anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance should not wear a mask.
  - Ensure that staff who have direct contact with the symptomatic individual wear recommended PPE.
  - Place the individual under medical isolation and refer to healthcare staff for further evaluation. (See Infection Control and Clinical Care sections below.)
  - Facilities without onsite healthcare staff should contact their state, local, tribal, and/or territorial health department to coordinate effective medical isolation and necessary medical care. See Transport section and coordinate with the receiving facility.
- **If an individual is an asymptomatic close contact of someone with COVID-19:**
  - Quarantine the individual and monitor for symptoms at least once per day for 14 days. (See Quarantine section below.)
  - Facilities without onsite healthcare staff should contact their state, local, tribal, and/or territorial health department to coordinate effective quarantine and necessary medical care. See Transport section and coordinate with the receiving facility.

✓ **Consider strategies for testing asymptomatic incarcerated/detained persons without known SARS-CoV-2 exposure for early identification of SARS-CoV-2 in the facility.**

Implement social distancing strategies to increase the physical space between incarcerated/detained persons (ideally 6 feet between all individuals, regardless of symptoms), and to minimize mixing of individuals from different housing units. Strategies will need to be tailored to the individual space in the facility and the needs of the population and staff. Not all strategies will be feasible in all facilities. Example strategies with varying levels of intensity include:

- **Common areas:**
  - Enforce increased space between individuals in holding cells as well as in lines and waiting areas such as intake (e.g., remove every other chair in a waiting area).
- **Recreation:**
  - Choose recreation spaces where individuals can spread out
  - Stagger time in recreation spaces (clean and disinfect between groups).
  - Restrict recreation space usage to a single housing unit per space (where feasible).
- **Meals:**
  - Stagger meals in the dining hall (one housing unit at a time; clean and disinfect between groups).
  - Rearrange seating in the dining hall so that there is more space between individuals (e.g., remove every other chair and use only one side of the table).
  - Provide meals inside housing units or cells.
- **Group activities:**
  - Limit the size of group activities.
  - Increase space between individuals during group activities.
  - Suspend group programs where participants are likely to be in closer contact than they are in their housing environment.
  - Consider alternatives to existing group activities, in outdoor areas or other areas where individuals can spread out.
- **Housing:**

- If space allows, reassign bunks to provide more space between individuals, ideally 6 feet or more in all directions. (Ensure that bunks are cleaned thoroughly if assigned to a new occupant.)
- Arrange bunks so that individuals sleep head to foot to increase the distance between their faces.
- Minimize the number of individuals housed in the same room as much as possible.
- Rearrange scheduled movements to minimize mixing of individuals from different housing areas.

- **Work details:**
  - Modify work detail assignments so that each detail includes only individuals from a single housing unit.
- **Medical:**
  - If possible, designate a room near each housing unit to evaluate individuals with COVID-19 symptoms, rather than having them walk through the facility to be evaluated in the medical unit. If this is not feasible, consider staggering individuals' sick call visits.
  - Stagger pill line, or stage pill line within individual housing units.
  - Identify opportunities to implement telemedicine to minimize the movement of healthcare staff across multiple housing units and to minimize the movement of ill individuals through the facility.
  - Designate a room near the intake area to evaluate new entrants who are flagged by the intake symptom screening process before they move to other parts of the facility.

✓ **Note that if group activities are discontinued, it will be important to identify alternative forms of activity to support the mental health of incarcerated/detained persons.**

✓ **Provide up-to-date information about COVID-19 to incarcerated/detained persons on a regular basis.** As much as possible, provide this information in person and allow opportunities for incarcerated/detained individuals to ask questions (e.g., town hall format if social distancing is feasible, or informal peer-to-peer education). Updates should address:

- Symptoms of COVID-19 and its health risks
- Reminders to report COVID-19 symptoms to staff at the first sign of illness
  - Address concerns related to reporting symptoms (e.g., being sent to medical isolation), explain the need to report symptoms immediately to protect everyone, and explain the differences between medical isolation and solitary confinement.
- Reminders to use masks as much as possible
- Changes to the daily routine and how they can contribute to risk reduction

Prevention Practices for Staff

✓ **When feasible and consistent with security priorities, encourage staff to maintain a distance of 6 feet or more from an individual with COVID-19 symptoms while interviewing, escorting, or interacting in other ways, and to wear recommended PPE if closer contact is necessary.**

✓ **Ask staff to keep interactions with individuals with COVID-19 symptoms as brief as possible.**

✓ **Remind staff to stay at home if they are sick.**Ensure staff are aware that they will not be able to enter the facility if they have symptoms of COVID-19, and that they will be expected to leave the facility as soon as possible if they develop symptoms while on duty.

✓ **Consider strategies for testing asymptomatic staff without known SARS-CoV-2 exposure** for early identification of SARS-CoV-2 in the facility.

- Follow guidance from the Equal Employment Opportunity Commission when offering testing to staff. **Any time a positive test result is identified, relevant employers should:**
  - Ensure that the individual is rapidly notified, connected to appropriate medical care, and advised how to self-isolate.
  - Inform other staff about their possible exposure in the workplace but should maintain the infected employee's confidentiality as required by the Americans with Disabilities Act .

✓ **Perform verbal screening and temperature checks for all staff daily on entry.** See Screening section below for wording of screening questions and a recommended procedure to safely perform temperature checks.

- In very small facilities with only a few staff, consider self-monitoring or virtual monitoring (e.g., reporting to a central authority via phone).
- Send staff home who do not clear the screening process, and advise them to follow CDC-recommended steps for persons who are ill with COVID-19 symptoms.

✓ **Provide staff with up-to-date information about COVID-19 and about facility policies on a regular basis, including:**

- Symptoms of COVID-19 and its health risks
- Employers' sick leave policy

✓ **If staff develop a fever or other symptoms of COVID-19 while at work**, they should immediately put on a mask (if not already wearing one), inform their supervisor, leave the facility, and follow CDC-recommended steps for persons who are ill with COVID-19 symptoms.

✓ **Staff identified as close contacts of someone with COVID-19 should self-quarantine at home for 14 days, unless a shortage of critical staff precludes quarantine.**

- Staff identified as close contacts should self-monitor for symptoms and seek testing.
- Refer to CDC guidelines for further recommendations regarding home quarantine.
- **To ensure continuity of operations, critical infrastructure workers (including corrections officers, law enforcement officers, and healthcare staff) may be permitted to continue work following potential exposure to SARS-CoV-2 , provided that they remain *asymptomatic* and additional precautions are implemented to protect them and others.**
  - **Screening:** The facility should ensure that temperature and symptom screening takes place daily before the staff member enters the facility.
  - **Regular Monitoring:** The staff member should self-monitor under the supervision of their employer's occupational health program. If symptoms develop, they should follow CDC guidance on isolation with COVID-19 symptoms.
  - **Wear a Mask:** The staff member should wear a mask (unless contraindicated) at all times while in the workplace for 14 days after the last exposure (if not already wearing one due to universal use of masks).
  - **Social Distance:** The staff member should maintain 6 feet between themselves and others and practice social distancing as work duties permit.
  - **Disinfect and Clean Workspaces:** The facility should continue enhanced cleaning and disinfecting practices in all areas including offices, bathrooms, common areas, and shared equipment.

✓ **Staff with confirmed or suspected COVID-19 should inform workplace and personal contacts immediately. These staff should be required to meet CDC criteria for ending home isolation before returning to work.** Monitor CDC guidance on discontinuing home isolation regularly, as circumstances evolve rapidly.

Prevention Practices for Visitors

✓ **Restrict non-essential vendors, volunteers, and tours from entering the facility.**

✓ **If possible, communicate with potential visitors to discourage contact visits in the interest of their own health and the health of their family members and friends inside the facility.**

✓ **Require visitors to wear masks (unless contraindicated), and perform verbal screening and temperature checks for all visitors and volunteers on entry.** See Screening section below for wording of screening questions and a recommended procedure to safely perform temperature checks.

- Staff performing temperature checks should wear recommended PPE.
- Exclude visitors and volunteers who do not clear the screening process or who decline screening.

✓ **Provide alcohol-based hand sanitizer with at least 60% alcohol in visitor entrances, exits, and waiting areas.**

✓ **Provide visitors and volunteers with information to prepare them for screening.**

- Instruct visitors to postpone their visit if they have COVID-19 symptoms.
- If possible, inform potential visitors and volunteers before they travel to the facility that they should expect to be screened for COVID-19 (including a temperature check), and will be unable to enter the facility if they do not clear the screening process or if they decline screening.
- Display signage outside visiting areas explaining the COVID-19 symptom screening and temperature check process. Ensure that materials are understandable for non-English speakers and those with low literacy.

✓ **Promote non-contact visits:**

- Encourage incarcerated/detained persons to limit in-person visits in the interest of their own health and the health of their visitors.
- Consider reducing or temporarily eliminating the cost of phone calls for incarcerated/detained persons.
- Consider increasing incarcerated/detained persons' telephone privileges to promote mental health and reduce exposure from direct contact with community visitors.

✓ **Consider suspending or modifying visitation programs, if legally permissible. For example, provide access to virtual visitation options where available.**

- If moving to virtual visitation, clean electronic surfaces regularly after each use. (See Cleaning guidance below for instructions on cleaning electronic surfaces.)
- Inform potential visitors of changes to, or suspension of, visitation programs.
- Clearly communicate any visitation program changes to incarcerated/detained persons, along with the reasons for them (including protecting their health and their family and community members' health).
- If suspending contact visits, provide alternate means (e.g., phone or video visitation) for incarcerated/detained individuals to engage with legal representatives, clergy, and other individuals with whom they have legal right to consult.

NOTE: Suspending visitation should only be done in the interest of incarcerated/detained persons' physical health and the health of the general public. Visitation is important to maintain mental health. If visitation is suspended, facilities should explore alternative ways for incarcerated/detained persons to communicate with their families, friends, and other visitors in a way that is not financially burdensome for them.

Management

If there is an individual with suspected COVID-19 inside the facility (among incarcerated/detained persons, staff, or visitors who have recently been inside), begin implementing Management strategies while test results are pending. Essential Management strategies include placing individuals with suspected or confirmed COVID-19 under medical isolation, quarantining their close contacts, and facilitating necessary medical care, while observing relevant infection control and environmental disinfection protocols and wearing recommended PPE.

Testing symptomatic and asymptomatic individuals (incarcerated or detained individuals and staff) and initiating medical isolation for suspected and confirmed cases and quarantine for close contacts, can help prevent spread of SARS-CoV-2 in correctional and detention facilities. Continue following recommendations outlined in the Preparedness and Prevention sections above.

Operations

✓ **Coordinate with state, local, tribal, and/or territorial health departments.** When an individual has suspected or confirmed COVID-19, notify public health authorities and request any necessary assistance with medical isolation, evaluation, and clinical care, and contact tracing and quarantine of close contacts. See Medical Isolation, Quarantine and Clinical Care sections below.

✓ Implement alternate work arrangements deemed feasible in the Operational Preparedness section.

✓ **Suspend all transfers of incarcerated/detained persons to and from other jurisdictions and facilities (including work release), unless necessary for medical evaluation, medical isolation/quarantine, health care, extenuating security concerns, release, or to prevent overcrowding.**

✓ **Set up PPE donning/doffing stations as described in the Preparation section.**

✓ **If possible, consider quarantining all new intakes for 14 days before they enter the facility's general population (separately from other individuals who are quarantined due to contact with someone who has COVID-19).** This practice is referred to as routine intake quarantine.

✓ **Consider testing all newly incarcerated/detained persons before they join the rest of the population in the correctional or detention facility.**

✓ **Minimize interactions between incarcerated/detained persons living in different housing units, to prevent transmission from one unit to another.** For example, stagger mealtimes and recreation times, and consider implementing broad movement restrictions.

✓ **Ensure that work details include only incarcerated/detained persons from a single housing unit, supervised by staff who are normally assigned to the same housing unit.**

- If a work detail provides goods or services for other housing units (e.g., food service or laundry), ensure that deliveries are made with extreme caution. For example, have a staff member from the work detail deliver prepared food to a set location, leave, and have a staff member from the delivery location pick it up. Clean and disinfect all coolers, carts, and other objects involved in the delivery.

✓ **Incorporate COVID-19 prevention practices into release planning.**

- Consider implementing a release quarantine (ideally in single cells) for 14 days prior to individuals' projected release date.
- Consider testing individuals for SARS-CoV-2 before release, particularly if they will be released to a congregate setting or to a household with persons at increased risk for severe illness from COVID-19.
- Screen all releasing individuals for COVID-19 symptoms and perform a temperature check (see Screening section below.)
  - If an individual does not clear the screening process, follow the protocol for suspected COVID-19 – including giving the individual a mask, if not already wearing one, immediately placing them under medical isolation, and evaluating them for SARS-CoV-2 testing.
  - If the individual is released from the facility before the recommended medical isolation period is complete, discuss release of the individual with state, local, tribal, and/or territorial health departments to ensure safe medical transport and continued shelter and medical care, as part of release planning. Make direct linkages to community resources to ensure proper medical isolation and access to medical care.
  - Before releasing an incarcerated/detained individual who has confirmed or suspected COVID-19, or who is a close contact of someone with COVID-19, contact local public health officials to ensure they are aware of the individual's release and anticipated location. If the individual will be released to a community-based facility, such as a homeless shelter, contact the facility's staff to ensure adequate time for them to prepare to continue medical isolation or quarantine as needed.

✓ **Incorporate COVID-19 prevention practices into re-entry programming.**

- Ensure that facility re-entry programs include information on accessing housing, social services, mental health services, and medical care within the context of social distancing restrictions and limited community business operations related to COVID-19.
  - Provide individuals about to be released with COVID-19 prevention information, hand hygiene supplies, and masks.

- Link individuals who need medication-assisted treatment for opioid use disorder to substance use, harm reduction, and/or recovery support systems . If the surrounding community is under movement restrictions due to COVID-19, ensure that referrals direct releasing individuals to programs that are continuing operations.
- Link releasing individuals to Medicaid enrollment and healthcare resources , including continuity of care for chronic conditions that may place an individual at increased risk for severe illness from COVID-19.
- When possible, encourage releasing individuals to seek housing options among their family or friends in the community, to prevent crowding in other congregate settings such as homeless shelters. When linking individuals to shared housing, link preferentially to accommodations with the greatest capacity for social distancing.

Hygiene

✓ **Continue to ensure that hand hygiene supplies are well-stocked in all areas of the facility** (see above).

✓ **Continue to emphasize practicing good hand hygiene and cough etiquette** (see above).

Cleaning and Disinfecting Practices

✓ Continue adhering to recommended cleaning and disinfection procedures for the facility at large (see above).

✓ Reference specific cleaning and disinfection procedures for areas where individuals with COVID-19 spend time (see below).

Management of Incarcerated/Detained Persons with COVID-19 Symptoms

NOTE: Some recommendations below apply primarily to facilities with onsite healthcare capacity. Facilities without onsite healthcare capacity or without sufficient space for medical isolation should coordinate with local public health officials to ensure that individuals with suspected COVID-19 will be effectively isolated, evaluated, tested (if indicated), and given care.

✓ Staff interacting with incarcerated/detained individuals with COVID-19 symptoms should wear recommended PPE (see Table 1).

✓ If possible, designate a room near each housing unit for healthcare staff to evaluate individuals with COVID-19 symptoms, rather than having symptomatic individuals walk through the facility to be evaluated in the medical unit.

✓ Incarcerated/detained individuals with COVID-19 symptoms should wear a mask (if not already wearing one, and unless contraindicated) and should be placed under medical isolation immediately. See Medical Isolation section below.

✓ **Medical staff should evaluate symptomatic individuals to determine whether SARS-CoV-2 testing is indicated.** Refer to CDC guidelines for information on evaluation and testing. See Infection Control and Clinical Care sections below as well. Incarcerated/detained persons with symptoms are included in the high-priority group for testing in CDC's recommendations due to the high risk of transmission within congregate settings.

- If the individual's SARS-CoV-2 test is positive, continue medical isolation. (See Medical Isolation section below.)
- If the SARS-CoV-2 test is negative, the individual can be returned to their prior housing assignment unless they require further medical assessment or care or if they need to be quarantined as a close contact of someone with COVID-19.

✓ **Work with public health or private labs, as available, to access testing supplies or services.**

Medical Isolation of Individuals with Confirmed or Suspected COVID-19

NOTE: Some recommendations below apply primarily to facilities with onsite healthcare capacity. Facilities without onsite healthcare capacity, or without sufficient space to implement effective medical isolation, should coordinate with local public health officials to ensure that individuals with confirmed or suspected COVID-19 will be appropriately isolated, evaluated

health officials to ensure that individuals with confirmed or suspected COVID-19 will be appropriately isolated, evaluated, tested, and given care.

✓ As soon as an individual develops symptoms of COVID-19 or tests positive for SARS-CoV-2 they should be given a mask (if not already wearing one and if it can be worn safely), immediately placed under medical isolation in a separate environment from other individuals, and medically evaluated.

✓ Ensure that medical isolation for COVID-19 is distinct from punitive solitary confinement of incarcerated/detained individuals, both in name and in practice.

Because of limited individual housing spaces within many correctional and detention facilities, infected individuals are often placed in the same housing spaces that are used for solitary confinement. To avoid being placed in these conditions, incarcerated/detained individuals may be hesitant to report COVID-19 symptoms, leading to continued transmission within shared housing spaces and, potentially, lack of health care and adverse health outcomes for infected individuals who delay reporting symptoms. Ensure that medical isolation is *operationally* distinct from solitary confinement, even if the same housing spaces are used for both. For example:

- Ensure that individuals under medical isolation receive regular visits from medical staff and have access to mental health services.
- Make efforts to provide similar access to radio, TV, reading materials, personal property, and commissary as would be available in individuals' regular housing units.
- Consider allowing increased telephone privileges without a cost barrier to maintain mental health and connection with others while isolated.
- Communicate regularly with isolated individuals about the duration and purpose of their medical isolation period.

✓ Keep the individual's movement outside the medical isolation space to an absolute minimum.

  - Provide medical care to isolated individuals inside the medical isolation space, unless they need to be transferred to a healthcare facility. See Infection Control and Clinical Care sections for additional details.
  - Serve meals inside the medical isolation space.
  - Exclude the individual from all group activities.
  - Assign the isolated individual(s) a dedicated bathroom when possible. When a dedicated bathroom is not feasible, do not reduce access to restrooms or showers as a result. Clean and disinfect areas used by infected individuals frequently on an ongoing basis during medical isolation.

✓ Ensure that the individual is wearing a mask if they must leave the medical isolation space for any reason, and whenever another individual enters. Provide clean masks as needed. Masks should be washed routinely and changed when visibly soiled or wet.

✓ If the facility is housing individuals with confirmed COVID-19 as a cohort:

  - Only individuals with laboratory-confirmed COVID-19 should be placed under medical isolation as a cohort. Do not cohort those with confirmed COVID-19 with those with suspected COVID-19, with close contacts of individuals with confirmed or suspected COVID-19, or with those with undiagnosed respiratory infection who do not meet the criteria for suspected COVID-19.
  - Ensure that cohorted groups of people with confirmed COVID-19 wear masks whenever anyone else (including staff) enters the isolation space. (Anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance should not wear a mask.)
  - When choosing a space to cohort groups of people with confirmed COVID-19, use a well-ventilated room with solid walls and a solid door that closes fully.
  - Use one large space for cohorted medical isolation rather than several smaller spaces. This practice will conserve PPE and reduce the chance of cross-contamination across different parts of the facility.

✓ If possible, avoid transferring infected individual(s) to another facility unless necessary for medical care. If transfer is necessary, see Transport section for safe transport guidance.

✓ **Staff assignments to isolation spaces should remain as consistent as possible, and these staff should limit their movements to other parts of the facility as much as possible.** These staff should wear recommended PPE as appropriate for their level of contact with the individual under medical isolation (see PPE section below) and should limit their own movement between different parts of the facility.

- If staff must serve multiple areas of the facility, ensure that they change PPE when leaving the isolation space. If a shortage of PPE supplies necessitates reuse, ensure that staff move only from areas of low to high exposure risk while wearing the same PPE, to prevent cross-contamination. For example, start in a housing unit where no one is known to be infected, then move to a space used as quarantine for close contacts, and end in an isolation unit. Ensure that staff are highly trained in infection control practices, including use of recommended PPE.

✓ **Provide individuals under medical isolation with tissues and, if permissible, a lined no-touch trash receptacle.** Instruct them to:

- **Cover** their mouth and nose with a tissue when they cough or sneeze
- **Dispose** of used tissues immediately in the lined trash receptacle
- Wash hands immediately with soap and water for at least 20 seconds. If soap and water are not available, clean hands with an alcohol-based hand sanitizer that contains at least 60% alcohol (where security concerns permit). Ensure that hand washing supplies are continually restocked.

✓ **Maintain medical isolation at least until CDC criteria for discontinuing home-based isolation have been met. These criteria have changed since CDC corrections guidance was originally issued and may continue to change as new data become available. Monitor the sites linked below regularly for updates.** This content will not be outlined explicitly in this document due to the rapid pace of change.

- CDC's recommended strategy for release from home-based isolation can be found in the *Discontinuation of Isolation for Persons with COVID-19 Not in Healthcare Settings Interim Guidance*.
- Detailed information about the data informing the symptom-based strategy, and considerations for extended isolation periods for persons in congregate settings including corrections, can be found here.
- If persons will require ongoing care by medical providers, discontinuation of transmission-based precautions (PPE) should be based on similar criteria found here.

Cleaning Spaces where Individuals with COVID-19 Spend Time

✓ **Ensure that staff and incarcerated/detained persons performing cleaning wear recommended PPE.** (See PPE section below.)

✓ **Thoroughly and frequently clean and disinfect all areas where individuals with confirmed or suspected COVID-19 spend time.**

- After an individual has been medically isolated for COVID-19, close off areas that they have used prior to isolation. If possible, open outside doors and windows to increase air circulation in the area. Wait as long as practical, up to 24 hours under the poorest air exchange conditions (consult CDC Guidelines for Environmental Infection Control in Health-Care Facilities for wait time based on different ventilation conditions) before beginning to clean and disinfect, to minimize potential for exposure to respiratory droplets.
- Clean and disinfect all areas (e.g., cells, bathrooms, and common areas) used by the infected individual, focusing especially on frequently touched surfaces (see list above in Prevention section).
- Clean and disinfect areas used by infected individuals on an ongoing basis during medical isolation.

✓ **Hard (non-porous) surface cleaning and disinfection**

- If surfaces are soiled, they should be cleaned using a detergent or soap and water prior to disinfection.
- Consult the list of products that are EPA-approved for use against the virus that causes COVID-19 . Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).

- If EPA-approved disinfectants are not available, diluted household bleach solutions can be used if appropriate for the surface. Unexpired household bleach will be effective against coronaviruses when properly diluted.
  - Use bleach containing 5.25%–8.25% sodium hypochlorite. Do not use a bleach product if the percentage is not in this range or is not specified.
  - Follow the manufacturer's application instructions for the surface, ensuring a contact time of at least 1 minute.
  - Ensure proper ventilation during and after application.
  - Check to ensure the product is not past its expiration date.
  - Never mix household bleach with ammonia or any other cleanser. This can cause fumes that may be very dangerous to breathe in.
- Prepare a bleach solution by mixing:
  - 5 tablespoons (1/3rd cup) of 5.25%–8.25% bleach per gallon of room temperature water

    OR
  - 4 teaspoons of 5.25%–8.25% bleach per quart of room temperature water
- Bleach solutions will be effective for disinfection up to 24 hours.
- Alcohol solutions with at least 70% alcohol may also be used.

✓ **Soft (porous) surface cleaning and disinfection**

- For soft (porous) surfaces such as carpeted floors and rugs, remove visible contamination if present and clean with appropriate cleaners indicated for use on these surfaces. After cleaning:
  - If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely.
  - Otherwise, use products that are EPA-approved for use against the virus that causes COVID-19 and are suitable for porous surfaces.

✓ **Electronics cleaning and disinfection**

- For electronics such as tablets, touch screens, keyboards, and remote controls, remove visible contamination if present.
  - Follow the manufacturer's instructions for all cleaning and disinfection products.
  - Consider use of wipeable covers for electronics.
  - If no manufacturer guidance is available, consider the use of alcohol-based wipes or spray containing at least 70% alcohol to disinfect touch screens. Dry surfaces thoroughly to avoid pooling of liquids.

  Additional information on cleaning and disinfection of communal facilities such can be found on CDC's website.

✓ **Food service items.** Individuals under medical isolation should throw disposable food service items in the trash in their medical isolation room. Non-disposable food service items should be handled with gloves and washed following food safety requirements. Individuals handling used food service items should clean their hands immediately after removing gloves.

✓ **Laundry from individuals with COVID-19 can be washed with other's laundry.**

- Individuals handling laundry from those with COVID-19 should wear a mask, disposable gloves, and a gown, discard after each use, and clean their hands immediately after.
- Do not shake dirty laundry. This will minimize the possibility of dispersing virus through the air. Ensure that individuals performing cleaning wear recommended PPE (see PPE section below).
- Launder items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely.
- Clean and disinfect clothes hampers according to guidance above for surfaces. If permissible, consider using a bag liner that is either disposable or can be laundered.

Transporting Individuals with Confirmed and Suspected COVID-19 and Quarantined Close Contacts

✓ **Refer to CDC guidance for Emergency Medical Services (EMS) on safely transporting individuals with confirmed or suspected COVID-19.** This guidance includes considerations for vehicle type, air circulation, communication with the receiving facility, and cleaning the vehicle after transport.

- If the transport vehicle is not equipped with the features described in the EMS guidance, at minimum drive with the windows down and ensure that the fan is set to high, in non-recirculating mode. If the vehicle has a ceiling hatch, keep it open.

✓ **Use the same precautions when transporting individuals under quarantine as close contacts of someone with COVID-19.**

✓ **See Table 1 for the recommended PPE for staff transporting someone with COVID-19.**

Managing Close Contacts of Individuals with COVID-19

NOTE: Some recommendations below apply primarily to facilities with onsite healthcare capacity. Facilities without onsite healthcare capacity or without sufficient space to implement effective quarantine should coordinate with local public health officials to ensure that close contacts of individuals with COVID-19 will be effectively quarantined and medically monitored

Contact Tracing

✓ **To determine who is considered a close contact of an individual with COVID-19, see definition of close contact and the Interim Guidance on Developing a COVID-19 Case Investigation and Contact Tracing Plan [12 Kb, 1 page] for more information.**

✓ **Contact tracing can be a useful tool to help contain disease outbreaks. When deciding whether to perform contact tracing, consider the following:**

- Have a plan in place for how close contacts of individuals with COVID-19 will be managed, including quarantine logistics.
- Contact tracing can be especially impactful when:
  - There is a small number of infected individuals in the facility or in a particular housing unit. Aggressively tracing close contacts can help curb transmission before many other individuals are exposed.
  - The infected individual is a staff member or an incarcerated/detained individual who has had close contact with individuals from other housing units or with other staff. Identifying those close contacts can help prevent spread to other parts of the facility.
  - The infected individual is a staff member or an incarcerated/detained individual who has recently visited a community setting. In this situation, identifying close contacts can help reduce transmission from the facility into the community.
- Contact tracing may be more feasible and effective in settings where incarcerated/detained individuals have limited contact with others (e.g., celled housing units), compared to settings where close contact is frequent and relatively uncontrolled (e.g., open dormitory housing units).
- If there is a large number of individuals with COVID-19 in the facility, contact tracing may become difficult to manage. Under such conditions, consider broad-based testing in order to identify infections and prevent further transmission.
- Consult CDC recommendations for Performing Broad-Based Testing for SARS-CoV-2 in Congregate Settings for further information regarding selecting a testing location, ensuring proper ventilation and PPE usage, setting up testing stations and supplies, and planning test-day operations.

Testing Close Contacts

✓ **Testing is recommended for all close contacts [12 KB, 1 page] of persons with SARS-CoV-2 infection, regardless of whether the close contacts have symptoms.**

- Medically isolate those who test positive to prevent further transmission (see Medical Isolation section above).
- Asymptomatic close contacts testing negative should be placed under quarantine precautions for 14 days from their last exposure

their last exposure.

Quarantine for Close Contacts (who test negative)

✓ **Incarcerated/detained persons who are close contacts of someone with confirmed or suspected COVID-19 (whether the infected individual is another incarcerated/detained person, staff member, or visitor) should be placed under quarantine for 14 days. (Refer to the Interim Guidance on Developing a COVID-19 Case Investigation and Contact Tracing Plan [12 KB, 1 page] for more information):**

- If a quarantined individual is tested again during quarantine and they remain negative, they should continue to quarantine for the full 14 days after last exposure and follow all recommendations of local public health authorities.
- If an individual is quarantined due to contact with someone with suspected COVID-19 who is subsequently tested and receives a negative result, they can be released from quarantine. See Interim Guidance on Testing for SARS-CoV-2 in Correctional and Detention Facilities for more information about testing strategies in correctional and detention settings.

✓ **Quarantined individuals should be monitored for COVID-19 symptoms at least once per day including temperature checks.**

- See Screening section for a procedure to perform temperature checks safely on asymptomatic close contacts of someone with COVID-19.
- If an individual develops symptoms for SARS-CoV-2, they should be considered a suspected COVID-19 case, given a mask (if not already wearing one), and moved to medical isolation immediately (individually, and separately from those with confirmed COVID-19 and others with suspected COVID-19) and further evaluated. (See Medical Isolation section above.) If the individual is tested and receives a positive result, they can then be cohorted with other individuals with confirmed COVID-19.

✓ **Quarantined individuals can be released from quarantine restrictions if they have not developed COVID-19 symptoms and have not tested positive for SARS-CoV-2 for 14 days since their last exposure to someone who tested positive.**

✓ **Keep a quarantined individual's movement outside the quarantine space to an absolute minimum.**

- Provide medical evaluation and care inside or near the quarantine space when possible.
- Serve meals inside the quarantine space.
- Exclude the quarantined individual from all group activities.
- Assign the quarantined individual a dedicated bathroom when possible. When providing a dedicated bathroom is not feasible, do not reduce access to restrooms or showers as a result.

✓ **Restrict quarantined individuals from leaving the facility (including transfers to other facilities) during the 14-day quarantine period, unless released from custody or a transfer is necessary for medical care, infection control, lack of quarantine space, or extenuating security concerns.**

✓ **If a quarantined individual leaves the quarantine space for any reason, they should wear a mask (unless contraindicated) as source control, if not already wearing one.**

- Quarantined individuals housed as a cohort should wear masks at all times (see cohorted quarantine section below).
- Quarantined individuals housed alone should wear a mask whenever another individual enters the quarantine space.
- Anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance should not wear a mask.

✓ **Meals should be provided to quarantined individuals in their quarantine spaces.** Individuals under quarantine should throw disposable food service items in the trash. Non-disposable food service items should be handled with gloves and washed with hot water or in a dishwasher. Individuals handling used food service items should clean their hands immediately after removing gloves.

✓ **Laundry from quarantined individuals can be washed with others' laundry.**

- Individuals handling laundry from quarantined persons should wear a mask, disposable gloves, and a gown, discard after each use, and clean their hands immediately after.
- Do not shake dirty laundry. This will minimize the possibility of dispersing virus through the air.
- Launder items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely.
- Clean and disinfect clothes hampers according to guidance above for surfaces. If permissible, consider using a bag liner that is either disposable or can be laundered.

✓ **Staff assignments to quarantine spaces should remain as consistent as possible, and these staff should limit their movements to other parts of the facility.** These staff should wear recommended PPE based on their level of contact with the individuals under quarantine (see PPE section below).

- If staff must serve multiple areas of the facility, ensure that they change PPE when leaving the quarantine space. If a shortage of PPE supplies necessitates reuse, ensure that staff move only from areas of low to high exposure risk while wearing the same PPE, to prevent cross-contamination.
- Staff supervising asymptomatic incarcerated/detained persons under routine intake quarantine (with no known exposure to someone with COVID-19) do not need to wear PPE but should still wear a mask as source control.

Cohorted Quarantine for Multiple Close Contacts (who test negative)

✓ **Facilities should make every possible effort to individually quarantine close contacts of individuals with confirmed or suspected COVID-19.** Cohorting multiple quarantined close contacts could transmit SARS-CoV-2 from those who are infected to those who are uninfected. Cohorting should only be practiced if there are no other available options.

✓ **In order of preference, multiple quarantined individuals should be housed:**

- **IDEAL:** Separately, in single cells with solid walls (i.e., not bars) and solid doors that close fully
- Separately, in single cells with solid walls but without solid doors
- As a cohort, in a large, well-ventilated cell with solid walls, a solid door that closes fully, and at least 6 feet of personal space assigned to each individual in all directions
- As a cohort, in a large, well-ventilated cell with solid walls and at least 6 feet of personal space assigned to each individual in all directions, but without a solid door
- As a cohort, in single cells without solid walls or solid doors (i.e., cells enclosed entirely with bars), preferably with an empty cell between occupied cells creating at least 6 feet of space between individuals. (Although individuals are in single cells in this scenario, the airflow between cells essentially makes it a cohort arrangement in the context of COVID-19.)
- As a cohort, in multi-person cells without solid walls or solid doors (i.e., cells enclosed entirely with bars), preferably with an empty cell between occupied cells. Employ social distancing strategies related to housing in the Prevention section to maintain at least 6 feet of space between individuals housed in the same cell.
- As a cohort, in individuals' regularly assigned housing unit but with no movement outside the unit (if an entire housing unit has been exposed – referred to as "quarantine in place"). Employ social distancing strategies related to housing in the Prevention section above to maintain at least 6 feet of space between individuals.
- Safely transfer to another facility with capacity to quarantine in one of the above arrangements. (See Transport) (NOTE – Transfer should be avoided due to the potential to introduce infection to another facility; proceed only if no other options are available.)

If the ideal choice does not exist in a facility, use the next best alternative as a harm reduction approach.

✓ **If cohorting close contacts is absolutely necessary, be especially mindful of those who are at increased risk for severe illness from COVID-19.** Ideally, they should not be cohorted with other quarantined individuals. If cohorting is unavoidable, make all possible accommodations to reduce exposure for the individuals with increased risk of severe illness. (For example, intensify social distancing strategies for individuals with increased risk.)

✓ **If single cells for isolation (of those with suspected COVID-19) and quarantine (of close contacts) are limited, prioritize them in rank order as follows to reduce the risk of further SARS-CoV-2 transmission and adverse health outcomes:**

- Individuals with suspected COVID-19 who are at increased risk for severe illness from COVID-19
- Others with suspected COVID-19
- Quarantined close contacts of someone with COVID-19 who are themselves at increased risk for severe illness from COVID-19

✓ If a facility must cohort quarantined close contacts, **all cohorted individuals should be monitored closely for symptoms of COVID-19, and those with symptoms should be placed under medical isolation immediately**.

✓ **If an individual who is part of a quarantined cohort becomes symptomatic:**

- **If the individual is tested for SARS-CoV-2 and receives a positive result:** the 14-day quarantine clock for the remainder of the cohort must be reset to 0.
- **If the individual is tested for SARS-CoV-2 and receives a negative result:** the 14-day quarantine clock for this individual and the remainder of the cohort does not need to be reset. This individual can return from medical isolation to the quarantine cohort for the remainder of the quarantine period as their symptoms and diagnosis allow.
- **If the individual is not tested for SARS-CoV-2:** the 14-day quarantine clock for the remainder of the cohort must be reset to 0.

✓ **Consider re-testing all individuals in a quarantine cohort every 3-7 days, and immediately place those who test positive under medical isolation.** This strategy can help identify and isolate infected individuals early and minimize continued transmission within the cohort.

✓ **Consider testing all individuals quarantined as close contacts of someone with suspected or confirmed COVID-19 at the end of the 14-day quarantine period, before releasing them from quarantine precautions.**

✓ **Do not add more individuals to an existing quarantine cohort after the 14-day quarantine clock has started.** Doing so would complicate the calculation of the cohort's quarantine period, and potentially introduce new sources of infection.

✓ Some facilities may choose to quarantine all new intakes for 14 days before moving them to the facility's general population as a general rule (not because they were exposed to someone with COVID-19). **Under this scenario, do not mix individuals undergoing routine intake quarantine with those who are quarantined due to COVID-19 exposure.**

Management Strategies for Incarcerated/Detained Persons without COVID-19 Symptoms

✓ **Provide clear information to incarcerated/detained persons about the presence of COVID-19 within the facility, and the need to increase social distancing and maintain hygiene precautions.**

- As much as possible, provide this information in person and allow opportunities for incarcerated/detained individuals to ask questions (e.g., town hall format if social distancing is feasible, or informal peer-to-peer education).
- Ensure that information is provided in a manner that can be understood by non-English speaking individuals and those with low literacy, and make necessary accommodations for those with cognitive or intellectual disabilities and those who are deaf or hard-of-hearing, blind, or have low-vision.

✓ **If individuals with COVID-19 have been identified among staff or incarcerated/detained persons anywhere in a facility, consider implementing regular symptom screening and temperature checks in housing units that have *not* yet identified infections, until no additional infections have been identified in the facility for 14 days.** Because some incarcerated/detained persons are hesitant to report symptoms, it is very important to monitor for symptoms closely even though doing so is resource intensive. See Screening section for a procedure to safely perform a temperature check.

✓ **Consider additional options to intensify social distancing** within the facility.

Management Strategies for Staff

✓ **Provide clear information to staff about the presence of COVID-19 within the facility, and the need to enforce universal use of masks (unless contraindicated) and social distancing and to encourage hygiene precautions.**

- As much as possible, provide this information in person (if social distancing is feasible) and allow opportunities for staff to ask questions.

✓ **Staff identified as close contacts of someone with COVID-19 should be tested for SARS-CoV-2 and self-quarantine at home for 14 days, unless a shortage of critical staff precludes quarantine of those who are asymptomatic (**see considerations for critical infrastructure workers). Refer to the Interim Guidance on Developing a COVID-19 Case Investigation and Contact Tracing Plan [12 KB, 1 page] for more information about contact tracing.

- Close contacts should self-monitor for symptoms and seek testing.
- Refer to CDC guidelines for further recommendations regarding home quarantine.

✓ **Staff who have confirmed or suspected COVID-19 should meet CDC criteria for ending home isolation before returning to work.** Monitor CDC guidance on discontinuing home isolation regularly, as circumstances evolve rapidly.

Infection Control

Infection control guidance below is applicable to all types of correctional and detention facilities. Individual facilities should assess their unique needs based on the types of exposure staff and incarcerated/detained persons may have with someone with confirmed or suspected COVID-19.

✓ **All individuals who have the potential for direct or indirect exposure to someone with COVID-19 or infectious materials (including body substances; contaminated medical supplies, devices, and equipment; contaminated environmental surfaces; or contaminated air) should follow infection control practices outlined in the CDC Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings. Monitor these guidelines regularly for updates.**

- Implement the above guidance as fully as possible within the correctional/detention context. Some of the specific language may not apply directly to healthcare settings within correctional facilities and detention centers, or to facilities without onsite healthcare capacity, and may need to be adapted to reflect facility operations and custody needs.
- Note that these recommendations apply to staff as well as to incarcerated/detained individuals who may come in contact with contaminated materials during the course of their work placement in the facility (e.g., cleaning).

✓ **Staff should exercise caution and wear recommended PPE when in contact with individuals showing COVID-19 symptoms.** Contact should be minimized to the extent possible until the infected individual is wearing a mask (if not already wearing one and if not contraindicated) and staff are wearing PPE.

✓ **Refer to PPE section to determine recommended PPE for individuals in contact with individuals with COVID-19, their close contacts, and potentially contaminated items.**

✓ **Remind staff about the importance of limiting unnecessary movements between housing units and through multiple areas of the facility, to prevent cross-contamination.**

✓ **Ensure that staff and incarcerated/detained persons are trained to doff PPE after they leave a space where PPE is required, as needed within the scope of their duties and work details. Ideally, staff should don clean PPE before entering a different space within the facility that also requires PPE.**

- If PPE shortages make it impossible for staff to change PPE when they move between different spaces within the facility, ensure that they are trained to move from areas of low exposure risk (“clean”) to areas of higher exposure risk (“dirty”) while wearing the same PPE, to minimize the risk of contamination across different parts of the facility.

Clinical Care for Individuals with COVID-19

✓ **Facilities should ensure that incarcerated/detained individuals receive medical evaluation and treatment at the first signs of COVID-19 symptoms.**

- If a facility is not able to provide such evaluation and treatment, a plan should be in place to safely transfer the individual to another facility or local hospital (including notifying the facility/hospital in advance). See Transport section. The initial medical evaluation should determine whether a symptomatic individual is at increased risk for severe illness from COVID-19. Persons at increased risk may include older adults and persons of any age with serious underlying medical conditions, including chronic kidney disease, serious heart conditions, and Type-2 diabetes. See CDC's website for a complete list and check regularly for updates as more data become available to inform this issue.
- Based on available information, pregnant people seem to have the same risk of COVID-19 as adults who are not pregnant. However, much remains unknown about the risks of COVID-19 to the pregnant person, the pregnancy, and the unborn child. Prenatal and postnatal care is important for all pregnant people, including those who are incarcerated/detained. Visit the CDC website for more information on pregnancy and breastfeeding in the context of COVID-19.

✓ **Staff evaluating and providing care for individuals with confirmed or suspected COVID-19 should follow the CDC Interim Clinical Guidance for Management of Patients with Confirmed Coronavirus Disease (COVID-19) and monitor the guidance website regularly for updates to these recommendations.**

✓ **Healthcare staff should evaluate persons with COVID-19 symptoms and those who are close contacts of someone with COVID-19 in a separate room, with the door closed if possible, while wearing recommended PPE and ensuring that the individual being evaluated is wearing a mask.**

- If possible, designate a room near each housing unit to evaluate individuals with COVID-19 symptoms, rather than having symptomatic individuals walk through the facility to be evaluated in the medical unit.

✓ **Clinicians are strongly encouraged to test for other causes of respiratory illness (e.g., influenza).** However, presence of another illness such as influenza does not rule out COVID-19.

✓ **When evaluating and treating persons with symptoms of COVID-19 who do not speak English, use a language line or provide a trained interpreter when possible.**

Recommended PPE and PPE Training for Staff and Incarcerated/Detained Persons

✓ **Ensure that all staff (healthcare and non-healthcare) and incarcerated/detained persons who will have contact with infectious materials in their work placements have been trained to correctly don, doff, and dispose of PPE relevant to the level of contact they will have with individuals with confirmed and suspected COVID-19. Ensure strict adherence to OSHA PPE requirements.**

- Ensure that staff and incarcerated/detained persons who require respiratory protection (e.g., N95 respirator) for their work responsibilities have been medically cleared, trained, and fit-tested in the context of an employer's respiratory protection program. If individuals wearing N95 respirators have facial hair, it should not protrude under the respirator seal, or extend far enough to interfere with the device's valve function (see OSHA regulations).
- For PPE training materials and posters, visit the CDC website on Protecting Healthcare Personnel.

✓ **Ensure that all staff are trained to perform hand hygiene after removing PPE.**

✓ **Ensure that PPE is readily available where and when needed, and that PPE donning/doffing/disposal stations have been set up as described in the Preparation section.**

✓ **Recommended PPE for incarcerated/detained individuals and staff in a correctional facility** will vary based on the type of contact they have with someone with COVID-19 and their close contacts (see Table 1). Each type of recommended PPE is defined below. **As above, note that PPE shortages are anticipated in every category during the COVID-19 response.**

- **N95 respirator**
  N95 respirators should be prioritized when staff anticipate contact with infectious aerosols or droplets from someone with COVID-19. See below for guidance on when surgical masks are acceptable alternatives for N95s. Individuals working under conditions that require an N95 respirator should not use a cloth mask when an N95 is indicated.
- **Surgical mask**
  Worn to protect the wearer from splashes, sprays, and respiratory droplets generated by others. (NOTE: Surgical masks are distinct from cloth masks, which are not PPE but are worn to protect others in the surrounding area from respiratory droplets generated by the wearer. Individuals working under conditions that require a surgical mask should not use a cloth mask when a surgical mask is indicated.)
- **Eye protection**
  Goggles or disposable face shield that fully covers the front and sides of the face.
- **A single pair of disposable patient examination gloves**
  Gloves should be changed if they become torn or heavily contaminated.
- **Disposable medical isolation gown or single-use/disposable coveralls, when feasible**
  - If custody staff are unable to wear a disposable gown or coveralls because it limits access to their duty belt and gear, ensure that duty belt and gear are disinfected after close contact with an individual with confirmed or suspected COVID-19, and that clothing is changed as soon as possible and laundered. Clean and disinfect duty belt and gear prior to reuse using a household cleaning spray or wipe, according to the product label.
  - If there are shortages of gowns, they should be prioritized for aerosol-generating procedures, activities where splashes and sprays are anticipated, and high-contact activities that provide opportunities for transfer of pathogens to the hands and clothing of the wearer.

✓ **Note that shortages of all PPE categories have been seen during the COVID-19 response, particularly for non-healthcare workers. Guidance for optimizing the supply of each category (including strategies to reuse PPE safely) can be found on CDC's website:**

- Strategies for optimizing the supply of N95 respirators
  - Based on local and regional situational analysis of PPE supplies, **surgical masks are an acceptable alternative when the supply chain of respirators cannot meet the demand**. During this time, available respirators should be prioritized for staff engaging in activities that would expose them to respiratory aerosols, which pose the highest exposure risk.
- Strategies for optimizing the supply of surgical masks
  - Reserve surgical masks for individuals who need PPE. Issue cloth masks to incarcerated/detained persons and staff as source control, in order to preserve surgical mask supply (see recommended PPE).
- Strategies for optimizing the supply of eye protection
- Strategies for optimizing the supply of gowns/coveralls
- Strategies for optimizing the supply of disposable medical gloves

Table 1. Recommended Personal Protective Equipment (PPE) for Incarcerated/Detained Persons and Staff in a Correctional or Detention Facility during the COVID-19 Response

Classification of Individual Wearing PPE	N95 respirator	Surgical mask	Eye Protection	Gloves	Gown/ Coveralls
Incarcerated/Detained Persons					
Asymptomatic incarcerated/detained persons (under quarantine as close contacts of someone with COVID-19)	Use cloth masks as source control (NOTE: cloth face coverings are NOT PPE and may not protect the wearer. Prioritize cloth masks for source control among all persons who do not meet criteria for N95 or surgical masks, and to conserve surgical masks for situations that require PPE.)				

Classification of Individual Wearing PPE	N95 respirator	Surgical mask	Eye Protection	Gloves	Gown/ Coveralls
Incarcerated/detained persons who have confirmed or suspected COVID-19, or showing symptoms of COVID-19					
Incarcerated/detained persons handling laundry or used food service items from someone with COVID-19 or their close contacts				X	X
Incarcerated/detained persons cleaning an area where someone with COVID-19 spends time	Additional PPE may be needed based on the product label. See CDC guidelines for more details.			X	X
Staff					
Staff having direct contact with asymptomatic incarcerated/detained persons under quarantine as close contacts of someone with COVID-19* (but not performing temperature checks or providing medical care)		Surgical mask, eye protection, and gloves as local supply and scope of duties allow.			
Staff performing temperature checks on any group of people (staff, visitors, or incarcerated/detained persons), or providing medical care to asymptomatic quarantined persons		X	X	X	
Staff having direct contact with (including transport) or offering medical care to individuals with confirmed or suspected COVID-19 (See CDC infection control guidelines). For recommended PPE for staff performing collection of specimens for SARS-CoV-2 testing see the Standardized procedure for SARS-CoV-2 testing in congregate settings.	X**		X	X	X
Staff present during a procedure on someone with confirmed or suspected COVID-19 that may generate infectious aerosols (See CDC infection control guidelines)	X		X	X	X
Staff handling laundry or used food service items from someone with COVID-19 or their close contacts				X	X
Staff cleaning an area where someone with COVID-19 spends time	Additional PPE may be needed based on the product label. See CDC guidelines for more details.			X	X

Classification of Individual Wearing PPE

* A NIOSH-approved N95 respirator is preferred. However, based on local and regional situational analysis of PPE supplies, surgical masks are an acceptable alternative when the supply chain of respirators cannot meet the demand. During this time, available respirators should be prioritized for procedures that are likely to generate respiratory aerosols, which would pose the highest exposure risk to staff.

Verbal Screening and Temperature Check Protocols for Incarcerated/Detained Persons, Staff, and Visitors

Incarcerated/Detained Persons, Staff, and Visitors

The guidance above recommends verbal screening and temperature checks for incarcerated/detained persons, staff, volunteers, and visitors who enter correctional and detention facilities, as well as incarcerated/detained persons who are transferred to another facility or released from custody. Below, verbal screening questions for COVID-19 symptoms and contact with known cases, and a safe temperature check procedure are detailed.

✓ **Verbal screening for symptoms of COVID-19 and contact with COVID-19 cases should include the following questions:**

- *Today or in the past 24 hours, have you had any of the following symptoms?*
  - *Fever, felt feverish, or had chills?*
  - *Cough?*
  - *Difficulty breathing?*
- *In the past 14 days, have you had close contact with a person known to be infected with the novel coronavirus (COVID-19)?*

✓ **The following is a protocol to safely check an individual's temperature:**

- Wash hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol.
- Put on a surgical mask, eye protection (goggles or disposable face shield that fully covers the front and sides of the face), and a single pair of disposable gloves
- Check individual's temperature
- **If performing a temperature check on multiple individuals, ensure that a clean pair of gloves is used for each individual and that the thermometer has been thoroughly cleaned in between each check.** If disposable or non-contact thermometers are used and the screener did not have physical contact with an individual, gloves do not need to be changed before the next check. If non-contact thermometers are used, they should be cleaned with an alcohol wipe (or isopropyl alcohol on a cotton swab) between each individual.
- Remove and discard PPE
- Wash hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol

✓ **If a physical barrier or partition is used to protect the screener rather than a PPE-based approach, the following protocol can be used.** (During screening, the screener stands behind a physical barrier, such as a glass or plastic window or partition, that can protect the screener's face and mucous membranes from respiratory droplets that may be produced when the person being screened sneezes, coughs, or talks.)

- Wash hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol.
- Put on a single pair of disposable gloves.
- Check the individual's temperature, reaching around the partition or through the window. Make sure the screener's face stays behind the barrier at all times during the screening.
- **If performing a temperature check on multiple individuals, ensure that a clean pair of gloves is used for each individual and that the thermometer has been thoroughly cleaned in between each check.** If disposable or non-contact thermometers are used and the screener did not have physical contact with an individual, gloves do not need to be changed before the next check. If non-contact thermometers are used, they should be cleaned with an alcohol wipe (or isopropyl alcohol on a cotton swab) between each individual.
- Remove and discard gloves.

ONSITE AUDIT INSPECTION REPORT

ENVIRONMENTAL CONDITIONS INSPECTION FOR SARS-CoV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

DISTRICT OF COLUMBIA DEPARTMENT OF CORRECTIONS (DC DOC), CENTRAL DETENTION FACILITY (CDF) AND CORRECTIONAL TREATMENT FACILITY (CTF)

JULY 2020

DRAFT

Prepared for
District of Columbia Department of Corrections
2000 14th Street NW, 7th Floor
Washington, DC 20009

Prepared by
Potomac-Hudson Engineering, Inc.
77 Upper Rock Circle, Suite 302, Rockville, MD, 20850

GSA Contract No. 7QRAA18D0074
Task Order No. CW82753

INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of this protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors. PHE provided a draft protocol to DC DOC on June 15, 2020, and the procedures described in the protocol were subsequently implemented later that week.

AUDIT OVERVIEW

SCOPE

PHE was tasked with inspecting the cleaning procedures used by two independent contractors at two DC DOC facilities after implementation of the procedures described in the Draft Protocol. PHE performed these inspections on June 29 and July 1, 2020. This report documents observed deviations, omissions, inconsistencies, and deficiencies, along with corrective action recommendations.

CENTRAL DETENTION FACILITY

On June 29, 2020, PHE inspected implementation of the cleaning procedures of Rock Solid District Group, LLC at the DC DOC's Central Detention Facility (CDF). An In-Brief Meeting was held prior to the inspection and was attended by:

- Ms. Gitana Stewart-Ponder (DOC)
- Ms. Gloria Robertson (DOC)
- Sgt. D. Worthan (DOC)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

At the conclusion of the inspection, an Out-Brief Meeting was held. This meeting was attended by:

- Mr. Lennard Johnson, Warden (DOC)
- Ms. Kathy Landerkin Deputy Warden (DOC)
- Ms. Rena Myles (DOC)
- Ms. Gloria Roberts (DOC)
- Ms. Gitana Stewart-Ponder (DOC) (via telephone)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

CORRECTIONAL TREATMENT FACILITY

On July 1, 2020, PHE inspected the cleaning procedures of Spectrum Management, LLC at the DC DOC's Correctional Treatment Facility (CTF). An Out-Brief Meeting was held at the conclusion of the inspection and was attended by:

- Ms. Gloria Robertson (DOC)
- Ms. Jackie Smith (DOC)
- Ms. Florinda Eaglin (DOC)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

DRAFT SUMMARY OF FINDINGS

Table 1 summarizes findings observed during the June 29 and July 1, 2020 onsite inspections. The table also provides recommended actions to correct the findings.

Following the table is a brief Action Plan with recommendations for implementing the corrective actions identified in ***Table 1***.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT	
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*) being used. In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant.	Sufficiently spraying to adequately wet and entire surface such as a table or wall is extremely difficult and time-consuming. It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces should then be wiped dry with a dry rag or are allowed to air-dry, as appropriate in a given area. This will further ensure that the entire surface is adequately wetted for the duration of the required contact time.
The contractor did not consistently allow for adequate wetting of the floor during mopping. On several occasions it was observed that a wet mop was used for an overly extensive period of time before being re-wetted. This resulted in portions of the floor being inadequately damped with a sufficient amount of disinfectant to ensure a 45 second contact time.	Ensure that mops are frequently wetted in the slop bucket during floor mopping. Consider requiring the contractor to provide additional mop buckets and dollies so that each person mopping has access to their own dolly that can be toted along with them as they mop. Based on site observations, there was an insufficient number of mop dollies. This required the dollies to remain in a centralized position and discouraged floor cleaners from more frequently wetting their mop heads. Additionally, the mop buckets themselves, which have their own sets of wheels on them, should be removed from the dollies and transported with those mopping the floors.
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
Currently, the cleaning contractor is only responsible for disinfecting the floor and doorknobs/door handles in the basement. Although DOC staff are responsible for the remaining areas, it is unclear if they know all the surfaces they need to clean and/or if they are aware of the proper contact time for the disinfectant.	Ensure that staff cleaning personnel are familiar with and are properly implementing the cleaning protocols currently being provided to the third-party contractors.
The contractor was observed cleaning windows, mirrors, and other glass surfaces with an ammonium-based window cleaner (Ecolab Oasis 255SF Industrial Window Cleaner) as opposed to an EPA-registered product approved for COVID-19.	Test the hydrogen peroxide-based disinfectant on glass surfaces. If acceptable, consider using the disinfectant on these surfaces instead of, or in addition to, traditional window cleaning chemicals.
In some cases, contractor personnel was observed cleaning doorknobs, door handles, and other frequently-touched surfaces with a hand sanitizer. While this is technically sufficient for disinfection, it is not be applied consistently in all areas and the proper contact time may or may not be properly implemented.	Ensure that all chemicals and cleaning procedures are consistently applied throughout the facility. If hand sanitizer is to be used on a regular basis for these surfaces, they should be documented in the cleaning protocol.
The contractor (Summit) that currently provides food service duties in the cafeteria is solely responsible for cleaning and disinfecting that area of the facility. It is not known if they are aware of or are following the proper protocols for disinfection in a manner consistent with the other areas of the facility.	Ensure that Summit is performing proper disinfection in a manner that is consistent with or exceeds the procedures being used elsewhere at the facility.
CONDITIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT	
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*) being used. In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant. Although this contractor (Spectrum) generally applied greater volumes of the disinfectant with the sprayers in a given area as compared to Rock Solid, it was still observed to be insufficient.	Sufficiently spraying to adequately wet and entire surface such as a table or wall is extremely difficult and time-consuming. It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces should then be wiped dry with a dry rag or be allowed to air-dry, as appropriate in a given area. This will further ensure that the entire surface is adequately wetted for the duration of the required contact time.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure that the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.
The contractor was not always performing its duties in a consistent manner. The following observations were made: • Some of the grated stairwells in the housing areas were mopped, while others were not. • In one area, contractor personnel were using hand sanitizer to disinfect doorknobs, door handles, and phones. However, in other areas, the peroxide disinfectant was used. • In the 96 Medical Area, the contractor did not clean the area between the gates and the elevators. However, this area was cleaned in the 82 Medical Area.	The following recommendations are made: • Ensure that all stairwells in the housing units are mopped. • Since different disinfectants require different contact times (depending on the active ingredients), ensure that the contractor is consistent in what they use. The contact time for ethanol (5 minutes) is much greater than that for peroxide (45 seconds). • Ensure that the contractor is clear on what areas are considered within their scope of work and which areas are not and ensure that they clean and disinfect all of the areas for which they are responsible.
The contractor was observed mixing and handling both the concentrated form of the peroxide disinfectant as well as the diluted form. In its concentrated form, the disinfectant has a pH of less than 2 and is extremely corrosive. Even in its diluted form, the disinfectant is still corrosive and presents danger to users. Contractor personnel were not wearing certain personal protective equipment (PPE) while performing these tasks. The contractor was also observed using the fogging unit without eye protection.	It is recommended that the personnel handling and mixing the disinfectant in the mixing room wear goggles and/or face shield to protect their eyes and face. Consider also requiring longer gloves that cover exposed skin between hands and sleeves. Consider requiring the contractor to where eye protection during fogging.

TABLE 1. FINDINGS FOR DC DOC FACILITIES (CDF AND CTF)	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The following POSITIVE observations were made with respect to Spectrum during the site inspection: • Personnel changed out mop water and/or mop heads at certain times throughout the day. • The peroxide disinfectant was used on windows, mirrors, and other glass surfaces in lieu of a typical glass cleaner. • The walls in the bathrooms were scrubbed with a hard-bristled mop.	Consider instructing Rock Solid personnel to follow some of these procedures as well.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

UPDATED PROTOCOL

As the first step in this CAP, PHE has prepared an updated COVID-19 Disinfection and Cleaning Protocol to help guide the cleaning contractors (see ***Appendix A***). The protocol has been improved to focus on and address observed contractor deficiencies. The update also revises some of the procedural language to more closely reflect site conditions, based on observations made during the site visit and conversations with both contractor and DOC personnel.

Specific items added to the protocol to correct deficiencies include:

- Added emphasis on thoroughly wetting the floors during mopping. The updates include requiring the contractors to remove mop buckets from the carts and/or providing additional carts with mop buckets to be available.
- Removing spray bottle application of the disinfectant as an option and requiring that wet cloths be used to more thoroughly wet each surface and ensure full contact time is met across the entire surface.
- Indicating that dry-sweeping is only permissible if an electrostatic broom or brush is used to collect dust and dirt with minimal aerosolization.
- Re-emphasizing that ALL vertical surfaces must be disinfected, with specific examples.
- Adding additional PPE requirements when working in the mixing room.

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

When providing the updated protocol, DOC should specifically point out those items which have changed from the draft protocol and ensure that the contractors understand all of their responsibilities and expectations.

PERIODIC RE-INSPECTIONS

As part of the existing scope of work, PHE is scheduled to conduct up two (2) follow up monthly site inspections to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected. As part of these follow-up inspections, PHE will hold a short, informal out-brief at the end of each day to discuss any findings or other observations made, and present options for correction.

PHE also recommends that DOC personnel perform additional inspections, as needed, based on the results of the PHE follow-up inspections, if deficiencies continue to be identified.

EFFECTIVENESS EVALUATION

The DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future. The DOC will also continue to perform voluntary testing of individuals onsite (both employees and inmates) every two weeks. As the year continues on, it is likely that additional waves or peaks may be observed throughout the region. DOC should closely monitor the number of persons onsite testing positive during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel from the virus.

This page intentionally blank.

APPENDIX A

SARS-CoV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

SARS-CoV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

PROJECT LOCATION: **DISTRICT OF COLUMBIA DEPARTMENT OF CORRECTIONS**

CLEANING CONTRACTORS: **SPECTRUM MANAGEMENT, LLC and ROCK SOLID DISTRICT GROUP, LLC**

1.0 Introduction

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

The purpose of this Protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors. Cleaning crews should clean and disinfect all identified areas, focusing especially on frequently touched surfaces.

The procedures described in this Protocol shall be executed by the current contractors, Spectrum Management, LLC (Spectrum), and Rock Solid District Group, LLC (Rock Solid), with oversight by Potomac-Hudson Engineering, Inc. (PHE).

2.0 Implementation

2.1 Overview

The procedures described in the Protocol comply with or exceed the United States Centers for Disease Control and Prevention's (CDC's) recommended practices in response to the COVID-19 pandemic. It is important to note that the cleaning and disinfection procedures described herein cannot remove **ALL** viral particles from surfaces; however, following these procedures will substantially decrease the number on surfaces and thereby reduce the risk of infection and spreading.

2.2 Employee Screening

As part of existing entry procedures, all Spectrum and Rock Solid employees shall undergo a temperature check prior to each day's work for signs of possible COVID-19 infection before being allowed to enter the facility. This is currently being conducted for all DOC employees, visitors, contractors, and any other visitors to the facility. Persons who screen positive, defined as having a temperature of 100.4 degrees Fahrenheit or greater will return to their vehicle.

2.3 General Procedures

i. The Spectrum and Rock Solid crew leaders shall meet at the beginning of each work day with the DOC point of contact for the facility(ies) to be cleaned to discuss the areas to be cleaned on that day and to coordinate the movement of cleaning crew staff through the facility.

ii. Whenever possible, personnel shall attempt to wait at least 24 hours to enter an area or room previously occupied by an individual known to be infected with SARS-CoV-2. The National Institute of Health (NIH) has determined that the virus can remain active in the air for up to 3 hours and for up to 2 to 3 days on surfaces; however, some organizations have cautioned that the virus can remain active on surfaces for even longer periods of time.

iii. If surfaces are visibly dirty, they shall be cleaned using a detergent or soap and water prior to disinfection. If a surface or object has been soiled with blood or other bodily fluids, initially treat the area with a 10 percent bleach solution; then proceed to disinfecting the area for COVID-19.

iv. The product to be used for COVID-19 disinfecting is *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*. (A copy of the Safety Data Sheet [SDS] for this product is included in ***Attachment A***). The product, as purchased, contains 8 percent hydrogen peroxide and has a pH of 0.5 – 1.5 (extremely corrosive) and will be provided by the DOC. Use of the product may generate irritating vapors and is corrosive to the eyes and skin. Avoid using in small spaces with limited air exchange. Avoid touching any areas of your face while cleaning to prevent contact with the disinfecting compound and potential virus.

v. An alternate product, *Xpress Detergent Disinfectant*, may also be used. This product will typically be used by Spectrum personnel in the fogging machine. An SDS for this product is also included int ***Attachment A***.

vi. Spectrum and Rock Solid shall use the designated product in accordance with the manufacturer's instructions (mixed at 6 ounces per gallon), to include ensuring the required 45-second contact time of the wet disinfectant is met. The PHE industrial hygienist(s) shall conduct random observations/inspections of disinfectant use to verify that the product is used properly, and the designated contact time is met.

vii. When mixing disinfectant, personnel shall wear eye and face protection, to include goggles, face shields, or equivalent PPE. Likewise, similar protection shall be used during fogging activities.

viii. In order to ensure that the correct contact time is met, contractor personnel will apply rag/cloth soaked with the Ecolab Peroxide Multi Surface Cleaner and Disinfectant dilute mixture and liberally wipe the cloth on all applicable surfaces to ensure complete coverage. The entire surface shall be kept visibly wet for at least 45 seconds. Once the contact time has been achieved, the surface may be wiped down with a dry rag or allowed to air dry, depending on the location and amount of traffic in a given area

2.4 Disinfecting Procedures

i. Cleaning/disinfecting shall focus on all high-touch surfaces and areas, to include but not be limited to: desks, computer mouses and keyboards, phones, lockers, cubbies, window sills and counter tops, doors, frames, doorknobs and push bars, elevator buttons, light switches, handrails, bathroom floors, faucet handles, toilet handles, toilet stall door locks, towel

dispensers and hand driers, showers, kitchen areas, cafeterias, office common areas, nursing stations, and other rooms. An alcohol solution shall be used for all electronics. These services shall be carried out in accordance with the CDC's *Coronavirus Disease 2019 (COVID-19) Environmental Cleaning and Disinfection Recommendations* without restriction.

ii. Ventilate the rooms/spaces prior to and during cleaning/disinfecting. If ventilation through open windows is not possible, use a high-volume, high efficiency particulate air (HEPA) filter system to remove airborne particles from the air during cleaning. Temporarily increase the cleaning area's humidity to approximately 50 percent relative humidity (RH), if possible.

iii. Prior to disinfecting, Spectrum and Rock Solid shall perform general cleaning, removing dirt and debris using the *Ecolab Orange Force Multi Surface Cleaner and Degreaser*, to include floor mopping. Clean all dust from horizontal surfaces with a towel dampened with the cleaner/degreaser to minimize re-aerosolization of settled contaminated dust and particles. Use a slow, smooth wiping action and change out or wet clean the towel on a regular basis to minimize re-aerosolization of collected dust and particulates.

iv. Dry sweeping with a typical straw or push-broom is not permitted. Instead, use of an electrostatic broom or brush (e.g., Swiffer Sweeper or equivalent) is permitted to remove dust and dirt particles prior to wet mopping.

v. When mopping, ensure the floor surfaces that are disinfected stay wet for at least 45 seconds. Frequently re-wet the mop head to ensure a thorough soaking of the floor. Consider changing mop water at least once per day, and ensure designated mops are used for bathrooms and that these mops are not used elsewhere. Ensure that all stairwells in the housing units are mopped as well.

vi. Pay special attention to window ledges and other commonly dusty surfaces. Also pay special attention to frequently touched surfaces, such as railings, ledges, and countertops. Ensure that glass surfaces (e.g., windows, mirrors) are also disinfected.

vii. Disinfect **ALL** vertical surfaces to a height of at least 6 feet above the floor, including but not limited to walls, windows, columns, doors, rails, etc.

viii. As part of this protocol, it is strongly recommended that the contractor clean and disinfect heating, ventilation, and air conditioning (HVAC) supply and exhaust grills/diffusers, including removal of caked-on debris, dust, grease, etc. This will likely require the use of a ladder as these features are typically located at ceiling level.

ix. Disinfect floors by mopping with *Ecolab Peroxide Multi Surface Cleaner and Disinfectant* (this is the second round of mopping). Avoid aerosolizing the dirty cleaning liquid by using steady and sweeping mop swipes and careful, deliberate mop head squeezes.

x. Restrooms shall receive special attention due to the tendency of the SARS-CoV-2 virus to bioaccumulate within feces, vomit, sputum, and urine. Clean any surfaces that have visible blood, stool, or body fluids.

xi. Trash liners shall be removed, and the trash receptacles disinfected. After air drying of the trash receptacles, a new liner shall be inserted in each receptacle.

xii. Following disinfecting, the DOC representative shall identify areas for fogging. Fogging shall be accomplished using ultra-low-volume foggers (a sprayer shall not be used as a substitute for a fogger) to ensure that all surfaces are adequately saturated. In general, fogging of walls shall be

applied to a height of 6 feet. When fogging, employees shall wear a full-face respirator equipped with organic vapor and acid gas cartridges. Access to the areas in which fogging is conducted shall be limited until the fogging aerosols have settled.

xiii. For soft (porous) surfaces such as carpeted floors, rugs, and drapes, remove visible contamination if present, and clean with appropriate cleaners indicated for use on these surfaces. If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely. Otherwise, use products with the U.S. Environmental Protection Agency (USEPA)-approved emerging viral pathogens claims that are suitable for porous surfaces.

xiv. Vacuum carpeting and other fabrics with vacuums equipped with HEPA filtration systems. Take appropriate precautions when changing the vacuum HEPA or pre-filter to minimize exposures to airborne dusts.

xv. Although the procedures described herein are designed for Spectrum and Rock Solid, ensure that any other entity performing disinfectant cleaning at the facilities (e.g., Summit in the dining rooms or the inmate cleaning detail) are following these procedures as well or are following equivalent procedures.

2.5 Employee Safety

i. Spectrum and Rock Solid employees shall complete the appropriate training, to include COVID-19 awareness, hazard communication (with specific attention on the hazards of the cleaners and disinfectants to be used), and bloodborne pathogens exposure control.

ii. Protection from potential viral infection from skin contact and aerosol inhalation is required through the use of PPE and hand washing. The minimal level of PPE for workers performing the decontamination and disinfection includes a face mask and nitrile gloves. Additional PPE shall be permitted as desired, to include half-mask or full-face negative pressure respirators with dual P-100 organic vapor and acid gas cartridges and full-body Tyvek coveralls (with shoe coverings). Gloves may be sealed to the coveralls with duct tape for additional protection, and replaced immediately if punctured or torn. Crew members shall inspect each other to verify that the PPE is donned correctly prior to beginning work. Cleaning employees shall be reminded to avoid touching any unprotected parts of the face. Employees shall wear goggles while transferring and/or diluting the *Ecolab Peroxide Multi Surface Cleaner and Disinfectant*, and while emptying buckets. Employees shall be medically approved, trained, and properly fit-tested to wear the respective respirators.

iii. If any breaches should occur in the PPE or if contact with unprotected skin occurs, the following steps must be followed:

   a. immediately stop work;
   b. remove the damaged PPE;
   c. wash the skin with soap and warm water (if soap and water are not available, use an alcohol-based hand sanitizer that contains 60 to-95 percent alcohol); and
   d. report the breach to the crew leader.

iv. Extension cords for portable electrical equipment will be protected by ground fault circuit interrupters (GFCI).

v. Slip hazards are a potential concern due to the wet application (mopping of floors). Non-slip shoes shall be worn.

3.0 Quality Control and Oversight

The PHE industrial hygienist (or designated DC DOC employee) shall conduct random observations/inspections of wiped/mopped/fogged areas and document that the required contact time for the disinfectant (45 seconds) was achieved. The form in ***Attachment B*** may be used for this purpose, if desired.

ATTACHMENT A – SAFETY DATA SHEETS (SDSs)

SAFETY DATA SHEET

PEROXIDE MULTI SURFACE CLEANER AND DISINFECTANT

SECTION 1. PRODUCT AND COMPANY IDENTIFICATION

Product name	:	PEROXIDE MULTI SURFACE CLEANER AND DISINFECTANT
Other means of identification	:	Not applicable
Recommended use	:	Disinfectant
Restrictions on use	:	Reserved for industrial and professional use.
Product dilution information	:	3.125 % - 4.6875 %
Company	:	Ecolab Inc. 1 Ecolab Place St. Paul, Minnesota USA 55102 1-800-352-5326
Emergency health information	:	1-800-328-0026 (US/Canada), 1-651-222-5352 (outside US)
Issuing date	:	02/03/2020

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Product AS SOLD

Acute toxicity (Oral)	:	Category 4
Acute toxicity (Inhalation)	:	Category 3
Acute toxicity (Dermal)	:	Category 4
Skin corrosion	:	Category 1A
Serious eye damage	:	Category 1
Skin sensitization	:	Category 1

Product AT USE DILUTION

Eye irritation	:	Category 2B

GHS label elements

Product AS SOLD

Hazard pictograms :

Signal Word : Danger

Hazard Statements : Harmful if swallowed or in contact with skin.
Causes severe skin burns and eye damage.
May cause an allergic skin reaction.
Toxic if inhaled.

Precautionary Statements : **Prevention:**
Avoid breathing dust/ fume/ gas/ mist/ vapors/ spray. Wash skin thoroughly after handling. Do not eat, drink or smoke when using this product. Use only outdoors or in a well-ventilated area. Contaminated work clothing must not be allowed out of the workplace. Wear

protective gloves/ protective clothing/ eye protection/ face protection.
Response:
IF SWALLOWED: Call a POISON CENTER/doctor if you feel unwell. Rinse mouth. IF SWALLOWED: Rinse mouth. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. IF INHALED: Remove person to fresh air and keep comfortable for breathing. Immediately call a POISON CENTER/doctor. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER/doctor. If skin irritation or rash occurs: Get medical advice/ attention. Wash contaminated clothing before reuse.
Storage:
Store in a well-ventilated place. Keep container tightly closed. Store locked up.
Disposal:
Dispose of contents/ container to an approved waste disposal plant.

Product AT USE DILUTION

Signal Word	:	Warning
Hazard Statements	:	Causes eye irritation.
Precautionary Statements	:	**Prevention:** Wash skin thoroughly after handling. **Response:** IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/ attention.

Product AS SOLD

Other hazards	:	Do not mix with bleach or other chlorinated products – will cause chlorine gas.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Product AS SOLD

Pure substance/mixture	:	Mixture

Chemical name	**CAS-No.**	**Concentration (%)**
dodecylbenzene sulfonic acid	27176-87-0	5 - 10
Hydrogen peroxide	7722-84-1	8
Proprietary Fragrance	Proprietary Ingredient	0.1 - 1
Sulfuric acid	7664-93-9	0.1 - 1

Product AT USE DILUTION

Chemical name	**CAS-No.**	**Concentration (%)**
dodecylbenzene sulfonic acid	27176-87-0	0.1 - 1
Hydrogen peroxide	7722-84-1	0.375

SECTION 4. FIRST AID MEASURES

Product AS SOLD

In case of eye contact	:	Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention immediately.
In case of skin contact	:	Wash off immediately with plenty of water for at least 15 minutes. Use

		a mild soap if available. Wash clothing before reuse. Thoroughly clean shoes before reuse. Get medical attention immediately.
If swallowed	:	Rinse mouth with water. Do NOT induce vomiting. Never give anything by mouth to an unconscious person. Get medical attention immediately.
If inhaled	:	Remove to fresh air. Treat symptomatically. Get medical attention immediately.
Protection of first-aiders	:	If potential for exposure exists refer to Section 8 for specific personal protective equipment.
Notes to physician	:	Treat symptomatically.
Most important symptoms and effects, both acute and delayed	:	See Section 11 for more detailed information on health effects and symptoms.

Product AT USE DILUTION

In case of eye contact	:	Rinse with plenty of water.
In case of skin contact	:	Rinse with plenty of water.
If swallowed	:	Rinse mouth. Get medical attention if symptoms occur.
If inhaled	:	Get medical attention if symptoms occur.

SECTION 5. FIRE-FIGHTING MEASURES

Product AS SOLD

Suitable extinguishing media	:	Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Unsuitable extinguishing media	:	None known.
Specific hazards during fire fighting	:	Oxidizer. Contact with other material may cause fire.
Hazardous combustion products	:	Decomposition products may include the following materials: Carbon oxides Sulfur oxides
Special protective equipment for fire-fighters	:	Use personal protective equipment.
Specific extinguishing methods	:	Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations. In the event of fire and/or explosion do not breathe fumes.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Product AS SOLD

Personal precautions, protective equipment and emergency procedures	:	Ensure adequate ventilation. Keep people away from and upwind of spill/leak. Avoid inhalation, ingestion and contact with skin and eyes. When workers are facing concentrations above the exposure limit they must use appropriate certified respirators. Ensure clean-up is

		conducted by trained personnel only. Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. Isolate absorbed wastes contaminated with this product from other waste streams containing combustible materials (paper, wood fibers, cloth, etc.). Combustible materials exposed to this product should be rinsed immediately with large amounts of water to ensure that all product is removed. Residual product which is allowed to dry on organic materials such as rags, cloths, paper, fabrics, cotton, leather, wood, or other combustibles may spontaneously ignite and result in a fire.

Product AT USE DILUTION

Personal precautions, protective equipment and emergency procedures	:	Refer to protective measures listed in sections 7 and 8.
Environmental precautions	:	Do not allow contact with soil, surface or ground water.
Methods and materials for containment and cleaning up	:	Stop leak if safe to do so. Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth, diatomaceous earth, vermiculite) and place in container for disposal according to local / national regulations (see section 13). Flush away traces with water. For large spills, dike spilled material or otherwise contain material to ensure runoff does not reach a waterway.

SECTION 7. HANDLING AND STORAGE

Product AS SOLD

Advice on safe handling	:	Do not ingest. Do not get in eyes, on skin, or on clothing. Do not breathe dust/ fume/ gas/ mist/ vapors/ spray. Use only with adequate ventilation. Wash hands thoroughly after handling. Do not mix with bleach or other chlorinated products – will cause chlorine gas. In case of mechanical malfunction, or if in contact with unknown dilution of product, wear full Personal Protective Equipment (PPE).
Conditions for safe storage	:	Keep in a cool, well-ventilated place. Keep away from reducing agents. Keep away from strong bases. Keep away from combustible material. Keep out of reach of children. Keep container tightly closed. Store in suitable labeled containers.
Storage temperature	:	15 °C to 40 °C

Product AT USE DILUTION

Advice on safe handling	:	Wash hands thoroughly after handling. In case of mechanical malfunction, or if in contact with unknown dilution of product, wear full Personal Protective Equipment (PPE).
Conditions for safe storage	:	Keep out of reach of children. Store in suitable labeled containers.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Product AS SOLD

Ingredients with workplace control parameters

Components	CAS-No.	Form of exposure	Permissible concentration	Basis
Hydrogen peroxide	7722-84-1	TWA	1 ppm	ACGIH
		TWA	1 ppm 1.4 mg/m3	NIOSH REL
		TWA	1 ppm 1.4 mg/m3	OSHA Z1
sulphuric acid	7664-93-9	TWA (Thoracic fraction)	0.2 mg/m3	ACGIH
		TWA	1 mg/m3	NIOSH REL
		TWA	1 mg/m3	OSHA Z1

Engineering measures : Effective exhaust ventilation system. Maintain air concentrations below occupational exposure standards.

Personal protective equipment

Eye protection : Wear eye protection/ face protection.

Hand protection : Wear the following personal protective equipment:
Standard glove type.
Gloves should be discarded and replaced if there is any indication of degradation or chemical breakthrough.

Skin protection : Personal protective equipment comprising: suitable protective gloves, safety goggles and protective clothing

Respiratory protection : When workers are facing concentrations above the exposure limit they must use appropriate certified respirators.

Hygiene measures : Handle in accordance with good industrial hygiene and safety practice. Remove and wash contaminated clothing before re-use. Wash face, hands and any exposed skin thoroughly after handling. Provide suitable facilities for quick drenching or flushing of the eyes and body in case of contact or splash hazard.

Product AT USE DILUTION

Engineering measures : Good general ventilation should be sufficient to control worker exposure to airborne contaminants.

Personal protective equipment

Eye protection : No special protective equipment required.

Hand protection : No special protective equipment required.

Skin protection : No special protective equipment required.

Respiratory protection : No personal respiratory protective equipment normally required.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

		Product AS SOLD	Product AT USE DILUTION
Appearance	:	liquid	liquid
Color	:	clear, yellow	yellow

Odor	:	Perfumes, fragrances	Perfumes, fragrances
pH	:	0.5 - 1.5, (100 %)	2.0 - 2.5
Flash point	:	Not applicable, Does not sustain combustion.	
Odor Threshold	:	No data available	
Melting point/freezing point	:	No data available	
Initial boiling point and boiling range	:	> 100 °C	
Evaporation rate	:	No data available	
Flammability (solid, gas)	:	Not applicable	
Upper explosion limit	:	No data available	
Lower explosion limit	:	No data available	
Vapor pressure	:	No data available	
Relative vapor density	:	No data available	
Relative density	:	1.025 - 1.049	
Water solubility	:	soluble	
Solubility in other solvents	:	No data available	
Partition coefficient: n-octanol/water	:	No data available	
Autoignition temperature	:	No data available	
Thermal decomposition	:	No data available	
Viscosity, kinematic	:	No data available	
Explosive properties	:	No data available	
Oxidizing properties	:	The substance or mixture is not classified as oxidizing.	
Molecular weight	:	No data available	
VOC	:	No data available	

SECTION 10. STABILITY AND REACTIVITY

Product AS SOLD

Reactivity	:	No dangerous reaction known under conditions of normal use.
Chemical stability	:	Contamination may result in dangerous pressure increases - closed containers may rupture.
Possibility of hazardous reactions	:	Do not mix with bleach or other chlorinated products – will cause chlorine gas.
Conditions to avoid	:	None known.
Incompatible materials	:	Bases Metals
Hazardous decomposition products	:	In case of fire hazardous decomposition products may be produced such as: Carbon oxides Sulfur oxides

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure	:	Inhalation, Eye contact, Skin contact

Potential Health Effects

Product AS SOLD

Eyes	:	Causes serious eye damage.
Skin	:	Harmful if absorbed through skin. Causes severe skin burns. May cause allergic skin reaction.
Ingestion	:	Harmful if swallowed. Causes digestive tract burns.
Inhalation	:	Toxic if inhaled. May cause nose, throat, and lung irritation.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Product AT USE DILUTION

Eyes	:	Causes eye irritation.
Skin	:	Health injuries are not known or expected under normal use.
Ingestion	:	Health injuries are not known or expected under normal use.
Inhalation	:	Health injuries are not known or expected under normal use.
Chronic Exposure	:	Health injuries are not known or expected under normal use.

Experience with human exposure

Product AS SOLD

Eye contact	:	Redness, Pain, Corrosion
Skin contact	:	Redness, Pain, Irritation, Corrosion, Allergic reactions
Ingestion	:	Corrosion, Abdominal pain
Inhalation	:	Respiratory irritation, Cough

Product AT USE DILUTION

Eye contact	:	Redness, Irritation
Skin contact	:	No symptoms known or expected.
Ingestion	:	No symptoms known or expected.
Inhalation	:	No symptoms known or expected.

Toxicity

Product AS SOLD

Product

Acute oral toxicity	:	Acute toxicity estimate : > 300 mg/kg
Acute inhalation toxicity	:	Acute toxicity estimate : 0.55 mg/l Test atmosphere: dust/mist
Acute dermal toxicity	:	Acute toxicity estimate : > 1,200 mg/kg

Respiratory or skin sensitization	:	No data available
Carcinogenicity	:	No data available
Reproductive effects	:	No data available
Germ cell mutagenicity	:	No data available
Teratogenicity	:	No data available
STOT-single exposure	:	No data available
STOT-repeated exposure	:	No data available
Aspiration toxicity	:	No data available

SECTION 12. ECOLOGICAL INFORMATION

Product AS SOLD
Ecotoxicity

Environmental Effects	:	Harmful to aquatic life.

Product

Toxicity to fish	:	No data available
Toxicity to daphnia and other aquatic invertebrates	:	No data available
Toxicity to algae	:	No data available

Components

Toxicity to fish	:	dodecylbenzene sulfonic acid 96 h LC50: 4.3 mg/l Sulfuric acid 96 h LC50: 22 mg/l

Components

Toxicity to algae	:	Hydrogen peroxide 72 h EC50: 1.38 mg/l

Persistence and degradability

Product AS SOLD
Not applicable - inorganic

Product AT USE DILUTION
Not applicable - inorganic

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

No data available

SECTION 13. DISPOSAL CONSIDERATIONS

Product AS SOLD

Disposal methods	:	Do not contaminate ponds, waterways or ditches with chemical or used container. Where possible recycling is preferred to disposal or incineration. If recycling is not practicable, dispose of in compliance with local regulations. Dispose of wastes in an approved waste disposal facility.
Disposal considerations	:	Dispose of as unused product. Empty containers should be taken to an approved waste handling site for recycling or disposal. Do not re-use empty containers. Dispose of in accordance with local, state, and federal regulations.
RCRA - Resource Conservation and Recovery Authorization Act Hazardous waste	:	D002 (Corrosive)

Product AT USE DILUTION

Disposal methods	:	Diluted product can be flushed to sanitary sewer.
Disposal considerations	:	Dispose of in accordance with local, state, and federal regulations.

SECTION 14. TRANSPORT INFORMATION

Product AS SOLD

The shipper/consignor/sender is responsible to ensure that the packaging, labeling, and markings are in compliance with the selected mode of transport.

Land transport (DOT)

Not dangerous goods

Sea transport (IMDG/IMO)

Not dangerous goods

SECTION 15. REGULATORY INFORMATION

Product AS SOLD

EPA Registration number : 1677-238

EPCRA - Emergency Planning and Community Right-to-Know

CERCLA Reportable Quantity

Components	CAS-No.	Component RQ (lbs)	Calculated product RQ (lbs)
dodecylbenzene sulfonic acid	27176-87-0	1000	10416

SARA 304 Extremely Hazardous Substances Reportable Quantity

This material does not contain any components with a section 304 EHS RQ.

SARA 311/312 Hazards : Acute toxicity (any route of exposure)
Skin corrosion or irritation
Serious eye damage or eye irritation
Respiratory or skin sensitization

SARA 302 : The following components are subject to reporting levels established by SARA Title III, Section 302:
Hydrogen peroxide 7722-84-1 5 - 10 %

SARA 313 : This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

California Prop. 65
This product does not contain any chemicals known to the State of California to cause cancer, birth, or any other reproductive defects.

California Cleaning Product Right to Know Act of 2017 (SB 258)
This regulation applies to this product.

Chemical Name	CAS-No.	Function	List(s)
water	7732-18-5	Diluent	Not Applicable

The information provided in this Safety Data Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.

SAFETY DATA SHEET

Xpress Detergent Disinfectant

1. PRODUCT AND COMPANY IDENTIFICATION

Product Name: Xpress Detergent Disinfectant
Product Code: A0346
Recommended Use: General cleaner and disinfectant

Company
Auto-Chlor System
746 Poplar Avenue
Memphis, TN 38105
Questions/Comments: 901-579-2300

Emergency Telephone Numbers
MEDICAL: 1-866-923-4946 (PROSAR) **SPILLS:** 1-800-424-9300 (CHEMTREC)

2. HAZARDS IDENTIFICATION

OSHA Hazard Classification

Signal Word: WARNING
Acute Toxicity: Category 4 (oral)
Acute Toxicity: Category 4 (dermal)
Eye Irritation: Category 2B

HAZARD STATEMENTS
H302: Harmful if swallowed
H312: Harmful in contact with skin
H320: Causes eye irritation

PRECAUTIONARY STATEMENTS
P264: Wash hands thoroughly after handling
P270: Do not eat, drink or smoke when using this product
P280: Wear eye protection
P301/P312: If swallowed, call a poison center or or physician if you feel unwell. rinse mouth.
P302/P352: If on skin, wash with plenty of soap and water.
P362/P364: Take off contaminated clothing and wash it before reuse.

3. COMPOSITION/INFORMATION ON INGREDIENTS

INGREDIENTS	CAS NO.	%
_Diethylene glycol monobutyl ether	112-34-5	8
Tetra sodium ethylenediamine tetra acetic acid (Na4 EDTA)	64-02-8	1.6

_Alkyl (68% C12, 32% C14) dimethyl ethylbenzyl ammonium chloride	85409-23-0	0.11
_Alkyl dimethyl benzyl ammonium chloride (C12-C18)	68391-01-5	0.11
Other components below reportable levels	141-43-5	<1.0

4. FIRST AID MEASURES

Ingestion: If swallowed, call a poison center if you feel unwell. Rinse mouth.

Skin Contact: If on skin, wash with plenty of water. If skin irritation occurs, get medical advice. Take off contaminated clothing and wash it before reuse.

Eye Contact: If in eyes, rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical advice.

5. FIREFIGHTING MEASURES

Extinguishing Media: Class A/B/C fire extinguisher, dry chemical, carbon dioxide, or foam

Specific Hazards: During fire, gases hazardous to health may be formed.

Protective Equipment: Wear full protective clothing and self-contained breathing apparatus

6. ACCIDENTAL RELEASE MEASURES

Personal Precautions: Isolate spill or leak area immediately. Adequately ventilate area.

Protective Equipment: Wear appropriate personal protective equipment as specified in Section 8.

Cleanup Procedures: Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal.

7. HANDLING AND STORAGE

Handling Precautions: Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling. Avoid prolonged exposure. Avoid release to the environment. FOR INDUSTRIAL AND INSTITUTIONAL USE ONLY.

Storage: Protect from freezing. Keep tightly closed in a dry, cool and well ventilated place.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Occupational Exposure Limits: No occupational exposure limits established for this product.

Appropriate Engineering Controls: Good general ventilation should be sufficient to control airborne levels.

Personal Protective Equipment

Eye Protection: Wear protective glasses, goggles or eye shield.

Skin Protection: Wear protective gloves.

Respiratory Protection: In case of insufficient ventilation, wear suitable respiratory equipment.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance:
liquid

Odor:
Citrus

pH:
11.7

Specific Gravity:
No information available

Solubility:
Soluble in water

Flash Point:
> 93.9C

10.STABILITY AND REACTIVITY

Stability: Stable under normal conditions

Hazardous Polymerization: Will not occur

Incompatibility: Strong acids, alkalies, and oxidizing agents.

Hazardous Decomposition Products: Oxides of nitrogen ammonia, carbon dioxide, carbon Monoxide, and other low molecular weight hydrocarbons

11.TOXICOLOGY INFORMATION

Likely Routes of Exposure: Inhalation, eye and skin contact

Acute Symptoms

Eye and Skin Contact: Causes eye irritation and causes mild skin irritation.

Ingestion: Expected to be a low ingestion hazard.

Inhalation: Prolonged inhalation may be harmful.

Chronic Effects: None known

Assessment of acute toxicity:

Oral LD_{50}	Dermal LD_{50}	Inhalation LC_{50}
>5 g/kg	>5 g/kg	2.43 mg/l

12.ECOLOGICAL INFORMATION

Toxic to aquatic life. Harmul to aquatic life with long lasting effects. Expected to be readily biodegradable.

13.DISPOSAL CONSIDERATIONS

Pesticide wastes are acutely hazardous. Improper disposal of all excess pesticide spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of by use according to label directions, contact your State Pesticide or Environmental Control Agency, or the Hazardous Waste Representatives at the nearest EPA Regional Office for guidance.

14.TRANSPORT INFORMATION

UN Number: Not classified
Proper Shipping Name: Not classified
Hazard Class: Not classified
Packing Group: Not classified

15.REGULATORY INFORMATION

This chemical is a pesticide product registered by the Environmental Protection Agency and is subject to certain labeling requirements under federal pesticide law. These requirements differ from the classification criteria and hazard information required for safety data sheets, and for workplace labels of non-pesticide chemicals. The pesticide label also includes other important information, including directions for use, pesticide storage and container handling.

EPA REGISTRATION NUMBER: 1839-83-6243

16.OTHER INFORMATION

Revision Date: 03/05/2020
Supersedes: new
Reason for Revision: New formulation

Notice to Reader: This document has been prepared using data from sources considered technically reliable. It does not constitute a warranty, express or implied, as to the accuracy of the information contained within. Actual conditions of use and handling are beyond seller's control. User is

responsible to evaluate all available information when using product for any particular use and to comply with all Federal, State, Provincial and Local laws and regulations.

GSA Contract No. 7QRAA18D0074
Task Order No. CW82753

INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of the protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can help prevent the spread of disease to Department of Corrections (DOC) inmates, staff, and visitors.

PHE provided a draft protocol to DC DOC on June 15, 2020 and conducted initial on-site observational inspections to verify compliance with the protocol on June 29 and July 1, 2020. Following these observational inspections, the disinfection protocol was revised and a report was provided to DC DOC summarizing the inspections and recommending a number of corrective actions to improve work practices and procedures. A follow up observational inspection was conducted on July 20, 2020 to verify implementation of the corrective action recommendations by the contractors who are conducting the disinfection.

AUDIT OVERVIEW

SCOPE

PHE Industrial Hygienist Gary Morris conducted the follow up inspection of the DC DOC Central Detention Facility (CDF) and the Correctional Treatment Facility (CTF). This report contains observations from these follow up inspections, deviations deficiencies and from prescribed work practices and procedures, and corrective action recommendations. An In-Brief Meeting was held prior to the inspections and was attended by DC DOC representatives Gloria Robertson and Rena Myles. At the conclusion of the inspections, an Out-Brief Meeting was held that was attended by Ms. Robertson, Ms. Myles, and Gitana Stewart-Ponder to summarize observations, deficiencies, and corrective action recommendations from the follow up inspection.

Sanitizing and disinfection of the CDF is being conducted by Rock Solid Rock Solid District Group, LLC and by Spectrum Management, LLC in the CTF.

SUMMARY OF FINDINGS

Tables 1A (CDF) and 1B (CTF) contain summaries of the findings from the initial oversight inspections, the recommended corrective action contained in the initial report, the status of each corrective action, and additional corrective action. Positive observations from the follow up inspection consist of the following:

- Some of the Spectrum Management, LLC staff did not wring out the rags after dipping in the bucket, increasing adequate coverage and contact time of surfaces (the rags were visibly soaked with the disinfectant).
- Spectrum Management, LLC staff carried the dip buckets and mop buckets with them to the areas in which they were disinfecting, increasing the frequency of re-wetting of the rags and mops.
- Spectrum Management, LLC staff periodically refilled the wipe buckets with the disinfectant.

It is recommended that these work practices be implemented by Rock Solid District Group, LLC in the CTF.

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*). In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant.	It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces can then be wiped dry with a dry rag or are allowed to air-dry, as appropriate in a given area.	The majority of contractor employees were still using spray application as opposed to wet wiping. Spray application was observed used on telephones, tables, and benches in one of the housing blocks. Also, the employees who were wet wiping were not returning to the cart to re-wet their rags at such a frequency to ensure the 45 second contact time on all of the surfaces treated. We also noted that surface drying in the housing units was faster due to the existence of wall and floor fans in the hallways (to help with conditioning the space).	Replace all spray application with wet wiping. Periodically remind contractor staff that the objective of their work is to disinfect surfaces as opposed to cleaning the surfaces, reinforcing the required 45 second contact time, with additional attention to the housing units due to the faster surface drying facilitated by the wall and floor fans. Instruct crew staff to liberally wet the rags and avoid wringing them out and to take the bucket with them to enable frequent re-wetting without returning to the cart. Ensure that all applicable items are disinfected (the exercise machine in the South 3 Housing Unit was not disinfected).

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
The contractor did not consistently allow for adequate wetting of the floor during mopping. On several occasions it was observed that a wet mop was used for an overly extensive period of time before being re-wetted. This resulted in portions of the floor being inadequately damped with a sufficient amount of disinfectant to ensure a 45 second contact time.	Ensure that mops are frequently wetted in the mop bucket during floor mopping. Consider requiring the contractor to provide additional mop buckets and dollies so that each person mopping has access to their own dolly that can be toted along with them as they mop. Based on site observations, there was an insufficient number of mop dollies. This required the dollies to remain in a centralized position and discouraged floor cleaners from more frequently wetting their mop heads. Additionally, the mop buckets themselves, which have their own sets of wheels on them, should be removed from the dollies and transported with those mopping the floors.	Observations of floor mopping indicated that the 45 second contact time was achieved.	As noted above, the existence of wall and floor fans in the housing units facilitates faster drying of surfaces, including floors in these areas. As an added measure, periodically remind contractor staff that additional attention is needed to ensure the 45 second contact time (i.e. periodically return the mop to the bucket to re-wet the mop) in the housing units. Removing the mop buckets from the carts will facilitate more frequent we-wetting of the mop heads.
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.	The contractor was not observed disinfecting walls.	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.	DC DOC has not been able to procure the dust mops through their supplier and is investigating additional suppliers. Work practices using the brooms in such a manner to minimize dispersion of accumulated dust were observed.	Continue attempts to procure the dust mops.
Currently, the cleaning contractor is only responsible for disinfecting the floor and doorknobs/door handles in the basement. Although DOC staff are responsible for the remaining areas, it is unclear if they know all the surfaces they need to clean and/or if they are aware of the proper contact time for the disinfectant.	Ensure that staff cleaning personnel are familiar with and are properly implementing the cleaning protocols currently being provided to the third-party contractors.	DOC staff has been informed of the surfaces to be addressed and the importance of the 45 second contact time.	No additional action is required.
The contractor was observed cleaning windows, mirrors, and other glass surfaces with an ammonium-based window cleaner (Ecolab Oasis 255SF Industrial Window Cleaner) as opposed to an EPA registered product.	Test the hydrogen peroxide-based disinfectant on glass surfaces. If acceptable, consider using the disinfectant on these surfaces instead of, or in addition to, traditional window cleaning chemicals.	The hydrogen peroxide-based disinfectant was used on all surfaces. Other products were not observed on the carts.	No additional action is required.

TABLE 1A. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY			
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**	**STATUS OF CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CENTRAL DETENTION FACILITY (CDF)/ROCK SOLID MANAGEMENT			
In some cases, contractor personnel were observed cleaning doorknobs, door handles, and other frequently-touched surfaces with a hand sanitizer. While this is technically sufficient for disinfection, it is not be applied consistently in all areas and the proper contact time may or may not be properly implemented.	Ensure that all chemicals and cleaning procedures are consistently applied throughout the facility. If hand sanitizer is to be used on a regular basis for these surfaces, they should be documented in the cleaning protocol.	The hydrogen peroxide-based disinfectant was used on all surfaces. Other products were not observed on the carts.	No additional action is required.
The contractor (Summit) that currently provides food service duties in the cafeteria is solely responsible for cleaning and disinfecting that area of the facility. It is not known if they are aware of or are following the proper protocols for disinfection in a manner consistent with the other areas of the facility.	Ensure that Summit is performing proper disinfection in a manner that is consistent with or exceeds the procedures being used elsewhere at the facility.	DC DOC has discussed appropriate disinfection practices with Summit (surfaces are disinfected three times per day).	No additional action is required.

TABLE 1B. FINDINGS FOR DC DOC CORRECTIONAL TREATMENT FACILITY			
RECOMMENDED CORRECTIVE ACTION	**RECOMMENDED CORRECTIVE ACTION**	**RECOMMENDED CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CORRECTIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT			
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*) being used. In several instances, a surface was wiped with a dry rag immediately after spray application of the disinfectant. In other instances, only a portion of a surface was sprayed wet and allowed for a 45-second contact time. The disinfectant was then wiped with a dry rag such that the unsprayed portion of the surface was not allotted adequate contact time with the disinfectant.	Sufficiently spraying to adequately wet and entire surface such as a table or wall is extremely difficult and time-consuming. It is recommended that the contractor apply a towel sufficiently wetted with the disinfectant to all surfaces in lieu of spraying. After adequate contact time (45 seconds) has been achieved, the surfaces should then be wiped dry with a dry rag or be allowed to air-dry, as appropriate in a given area. This will further ensure that the entire surface is adequately wetted for the duration of the required contact time.	Spraying and wiping of surfaces has been replaced with wet wiping. The 45 second contact time was achieved on all surfaces observed, including walls.	No additional action is required.
The contractor did not consistently disinfect all walls or other vertical surfaces to a height of 6 feet above the floor. While adequate disinfection of these surfaces was observed being performed in common areas, it was not being done in other areas (bathrooms, offices, and other non-communal spaces).	Ensure that the contractor is aware that ALL vertical surfaces (walls, windows, columns, doors, rails, etc.) must be properly disinfected from the floor to a height of six feet, including adequate contact time.	Observations during the follow up inspection indicated that appropriate surfaces, including walls were effectively being disinfected.	No additional action is required.

TABLE 1B. FINDINGS FOR DC DOC CORRECTIONAL TREATMENT FACILITY			
RECOMMENDED CORRECTIVE ACTION	**RECOMMENDED CORRECTIVE ACTION**	**RECOMMENDED CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CORRECTIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT			
The contractor dry-swept all floors prior to disinfection in contradiction to the cleaning protocols. Dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents.	The facility has ordered dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. This will be implemented as soon as they arrive. Ensure that the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.	DC DOC has not been able to procure the dust mops through their supplier and is investigating additional suppliers. Work practices using the brooms in such a manner to minimize dispersion of accumulated dust were observed.	Continue attempts to procure the dust mops.
The contractor was not always performing its duties in a consistent manner. The following observations were made: • Some of the grated stairwells in the housing areas were mopped, while others were not. • In one area, contractor personnel were using hand sanitizer to disinfect doorknobs, door handles, and phones. However, in other areas, the peroxide disinfectant was used. • In the 96 Medical Area, the contractor did not clean the area between the gates and the elevators. However, this area was cleaned in the 82 Medical Area.	The following recommendations are made: • Ensure that all stairwells in the housing units are mopped. • Since different disinfectants require different contact times (depending on the active ingredients), ensure that the contractor is consistent in what they use. The contact time for ethanol (5 minutes) is much greater than that for peroxide (45 seconds). • Ensure that the contractor is clear on what areas are considered within their scope of work and which areas are not and ensure that they clean and disinfect all of the areas for which they are responsible.	All applicable surfaces were addressed in the areas observed. The hydrogen peroxide-based disinfectant was used on all surfaces. Other products were not observed on the carts.	No additional action is required.

TABLE 1B. FINDINGS FOR DC DOC CORRECTIONAL TREATMENT FACILITY			
RECOMMENDED CORRECTIVE ACTION	**RECOMMENDED CORRECTIVE ACTION**	**RECOMMENDED CORRECTIVE ACTION**	**UPDATED CORRECTIVE ACTION**
CORRECTIONAL TREATMENT FACILITY (CTF)/SPECTRUM MANAGEMENT			
The contractor was observed mixing and handling both the concentrated form of the peroxide disinfectant as well as the diluted form. In its concentrated form, the disinfectant has a pH of less than 2 and is extremely corrosive. Even in its diluted form, the disinfectant is still corrosive and presents danger to users. Contractor personnel were not wearing certain personal protective equipment (PPE) while performing these tasks. The contractor was also observed using the fogging unit without eye protection.	It is recommended that the personnel handling and mixing the disinfectant in the mixing room wear goggles and/or face shield to protect their eyes and face. Consider also requiring longer gloves that cover exposed skin between hands and sleeves. Consider requiring the contractor to where eye protection during fogging.	Appropriate personal protective equipment was worn during mixing and transfers of the disinfectant. Fogging was not conducted on the day of the follow-up inspection.	No additional action is required on the part of Spectrum Management. PHE will attempt to observe fogging during the next oversight inspection.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

PERIODIC RE-INSPECTIONS

As part of the existing scope of work, PHE is scheduled to conduct up two (2) follow up monthly site inspections to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected. As part of these follow-up inspections, PHE will hold a short, informal out-brief at the end of each day to discuss any findings or other observations made, and present options for correction.

PHE also recommends that DOC personnel perform additional inspections, as needed, based on the results of the PHE follow-up inspections, if deficiencies continue to be identified.

EFFECTIVENESS EVALUATION

The DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future. The DOC will also continue to perform voluntary testing of individuals onsite (both employees and inmates) every two weeks. As the year continues on, it is likely that additional waves or peaks may be observed throughout the region. DOC should closely monitor the number of persons onsite testing positive during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel from the virus.

FOLLOW-UP ONSITE AUDIT INSPECTION REPORT No. 2
ENVIRONMENTAL CONDITIONS INSPECTION FOR SARS-CoV-2 (COVID-19) DISINFECTION AND CLEANING PROTOCOLS

DISTRICT OF COLUMBIA DEPARTMENT OF CORRECTIONS (DC DOC), CENTRAL DETENTION FACILITY (CDF) AND CORRECTIONAL TREATMENT FACILITY (CTF)

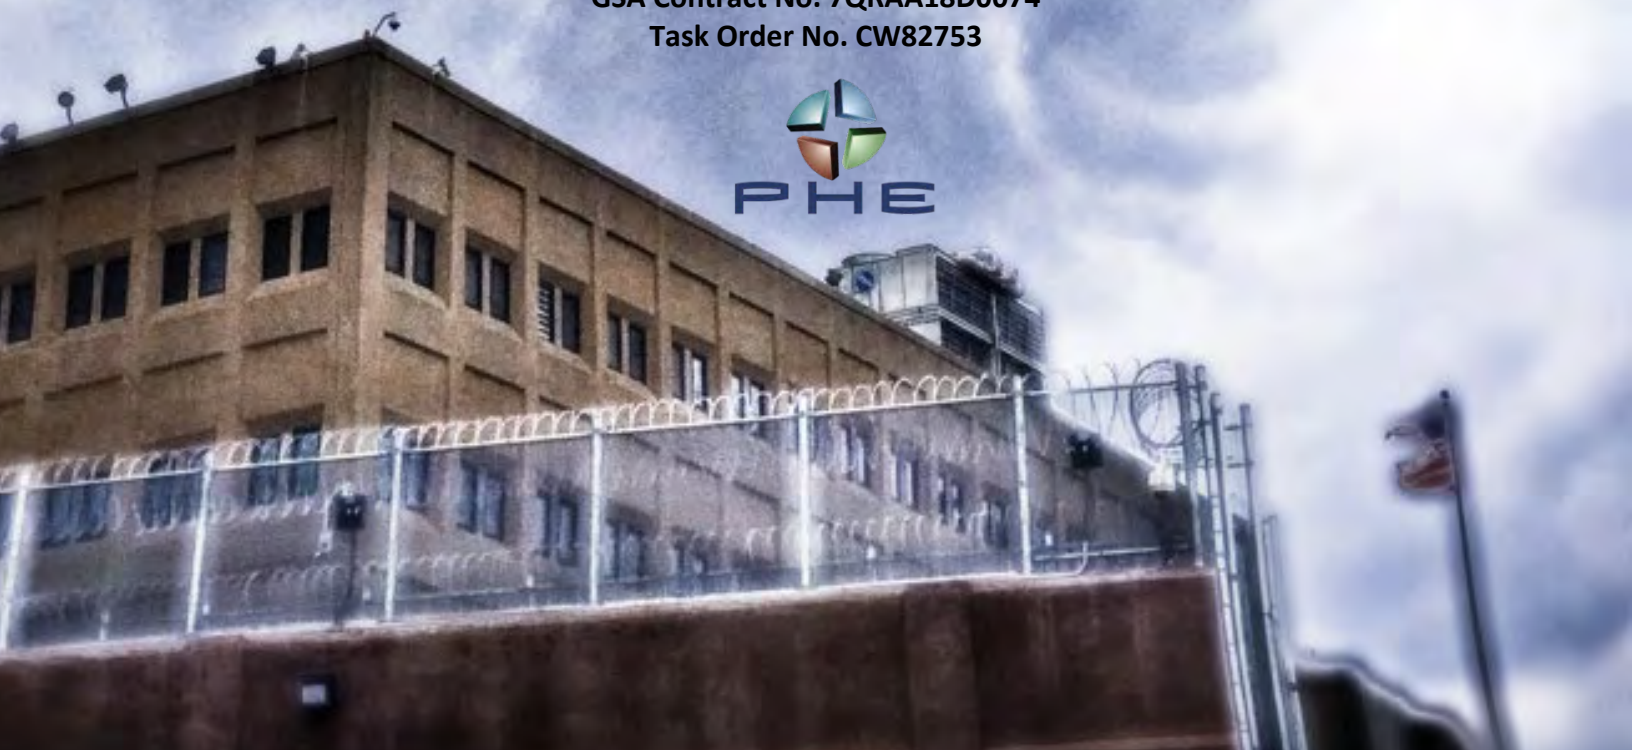
Task Order No. CW82753



INTRODUCTION

In January 2020, a novel virus, SARS-CoV-2, was identified as the cause of an outbreak of viral pneumonia in Wuhan, China and subsequently led to the world-wide spread of coronavirus disease 2019 (COVID-19). COVID-19 is primarily transmitted via person-to-person contact; however, surface contamination is also known to be a concern with the spread of the virus. The virus is mainly spread through respiratory droplets produced when an infected person coughs or sneezes. These droplets can land on people who are nearby (within 6 feet). It may also be possible for a person to contract SARS-CoV-2 by touching a contaminated surface or object and then touching their own mouth, nose, or eyes.

In May 2020, the District of Columbia Department of Corrections (DC DOC) contracted Potomac-Hudson Engineering, Inc. (PHE) to develop a cleaning and disinfection protocol specific to COVID-19 to be used by DC DOC cleaning contractors. The purpose of the protocol is to provide guidance on proper disinfection practices and personal protective equipment (PPE) requirements. Frequent, effective, and safe cleaning and disinfecting procedures can help prevent the spread of disease to DC DOC inmates, staff, and visitors.

PHE provided a draft protocol to DC DOC on June 15, 2020 and conducted initial on-site observational inspections to verify compliance with the protocol on June 29 and July 1, 2020. Following these observational inspections, the disinfection protocol was revised, and a report was provided to DC DOC summarizing the inspections and recommending a number of corrective actions to improve work practices and procedures. An initial follow-up observational inspection was conducted on July 20, 2020 to verify implementation of the corrective action recommendations by the contractors who are conducting the disinfection, and a follow-up report was issued on July 23, 2020.

On September 28, 2020, PHE conducted a second follow-up site visit to inspect the cleaning and disinfection process. This document provides a summary of PHE's observations, findings, and recommendations.

AUDIT OVERVIEW

SCOPE

Christopher Rua, CHMM and Gary Morris, CIH of PHE conducted the follow-up inspection of the DC DOC Central Detention Facility (CDF) and the Correctional Treatment Facility (CTF) on September 28, 2020. This report contains observations from this follow-up inspection, deficiencies and deviations from prescribed work practices and procedures, and corrective action recommendations. At the conclusion of the inspection, an Out-Brief Meeting was held to summarize observations, deficiencies, and corrective action recommendations from the follow up inspection. This meeting was attended by:

- Mr. Lennard Johnson, Warden (DOC)
- Ms. Kathy Landerkin, Deputy Warden (DOC)
- Ms. Jackie Smith, Site Safety Officer (DOC)
- Ms. Gloria Roberts, Compliance and Review Officer (DOC)
- Ms. Michele Jones, CTF Programs (DOC)
- Mr. Christopher Rua (PHE)
- Mr. Gary Morris (PHE)

Sanitizing and disinfection of the CDF is being conducted by G-SIDA General Services, LLC (G-SIDA) and by Spectrum Management, LLC (Spectrum) in the CTF. It should be noted that G-SIDA replaced Rock Solid Management Group, LLC as the contractor at the CDF on August 5, 2020. This was PHE's first observation of this contractor.

SUMMARY OF FINDINGS

Table 1 contains a summary of the findings from this oversight inspection as well as the recommended corrective action contained. Positive observations from the follow-up inspection consist of the following:

- Some of the staff of both contractors did not wring out the rags after dipping in the bucket, increasing adequate coverage and contact time of surfaces (the rags were visibly soaked with the disinfectant).
- Staff of both contractors carried the dip buckets and mop buckets with them to the areas in which they were disinfecting, increasing the frequency of re-wetting of the rags and mops.
- Contractor staff periodically refilled the wipe buckets with the disinfectant and changed mop water and mop heads several times throughout the day.
- Fans positioned in the housing blocks are now turned off during sanitizing to help extend contact time.
- Mop and rag buckets are filled by DOC staff to ensure consistent filling practices. Bleach solutions are also mixed by DOC staff and filled in spray bottles to ensure proper bleach/water ratios in the spray bottles.
- Spectrum crew wet wiped surfaces in the CTF Visitor's Entrance with the sanitizing solution and when dry, applied the solution a second time via a spray bottle and allowed the solution to air dry.

In general, significant improvement was observed during this site visit compared to previous site visits.

TABLE 1. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY AND CONDITIONAL TREATMENT FACILITY	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
The contractor did not consistently allow for the 45-second minimum contact time required for the hydrogen peroxide-based disinfectant (*Ecolab Peroxide Multi Surface Cleaner and Disinfectant*). Some contractor employees were not re-wetting their rags with sufficient frequency. As a result, some walls and other surfaces did not stay wetted for a full 45 seconds. This was particularly noted for the gates in the common areas near the elevators due to the intricate design and abundant surface area.	Periodically remind contractor staff that the objective of their work is to disinfect surfaces as opposed to cleaning the surfaces, reinforcing the required 45-second contact time. Instruct crew staff to liberally wet the rags and avoid wringing them out. Consider instructing the crews to have a brief onsite meeting at the beginning of each day to discuss these practices to reinforce the instructions. In the common areas, consider using the pump sprayer to thoroughly wet the gates. The sprayer will be able to coat the entirety of the surfaces more completely and efficiently than hand wiping.
The contractor continues to dry sweep all floors prior to disinfection in contradiction to the cleaning protocols, due to the limited availability of acceptable (i.e. plastic as opposed to metal) dusting brooms. Since dry sweeping can cause virus present on the floor to become airborne for several hours, increasing the contact and inhalation risk it presents, every attempt should be made to sweep in a slow, smooth motion. The contractors were observed to be sweeping in a rapid manner in several area.	It has been recommended that the facility procure dusting brooms (e.g., Swifter Sweepers or equivalent) which use electrostatic forces to attract and remove dirt and dust, to replace the current dry sweeping brooms. However, DC DOC has not yet been able to procure the dust mops through their supplier and is investigating additional suppliers. Continue attempts to procure the dust mops. Until the dusting brooms are procured, ensure the contractor uses a slow, smooth wiping action and change out or clean the dust broom pads/heads on a regular basis to maximize the effectiveness of the brooms to collect as much dust and dirt particulates as possible.
In some cases, contractor personnel were observed cleaning the surfaces of phones and other electronic devices (e.g., computer screens, keyboards) with a hand sanitizer. While this is technically sufficient for disinfection, the proper contact time may or may not be properly achieved. Disinfectants with ethyl alcohol as the active ingredient, such as hand sanitizer, require a minimum contact time ranging from 30 seconds up to 10 minutes, depending on the specific product and concentration.	The U.S. Environmental Protection Agency (USEPA) has compiled a list of disinfectants (List N) approved for effective use for COVID-19. The list is arranged by USEPA Registration Number, product name, manufacturer, active ingredient, and other criteria. Each product included on List N is denoted with the minimum contact time required to be effective against COVID-19. The list can be found here: https://cfpub.epa.gov/giwiz/disinfectants/index.cfm. If hand sanitizer is to be used on a regular basis for these surfaces, the product should be cross-checked against this list to determine if the product is approved and identify the proper contact time. Alternatively, if safe to use on phones and other electronic devices, consider using the *Ecolab Peroxide Multi Surface Cleaner and Disinfectant* on these surfaces for consistency.

TABLE 1. FINDINGS FOR DC DOC CENTRAL DETENTION FACILITY AND CONDITIONAL TREATMENT FACILITY	
SUMMARY OF FINDING	**RECOMMENDED CORRECTIVE ACTION**
In general, both contractors use dedicated sets of mops for bathrooms and locker rooms which are separate from the mops they use in offices and common areas. However, in area C3-112 at the CTF, **Spectrum** personnel were observed using the same mop for two offices and a small hallway that was also used for a single-stall bathroom in that area. It appears that the contractors did not know a bathroom was located in this area and therefore only brought one set of mops with them to this location.	Ensure at all times that mops used for bathrooms and locker rooms are not used in administrative and common areas.
Fogging is not being conducted by **G-SIDA** in the CDF due to the omission of this in the current contract.	As planned, include fogging in the next G-SIDA contract.

CORRECTIVE ACTION PLAN

PHE has developed a brief corrective action plan (CAP) as part of this document. A CAP is a step-by-step plan of action that is developed to achieve targeted outcomes for resolution of identified errors in an effort to:

- Identify the most cost-effective actions that can be implemented to correct error causes
- Develop and implement a plan of action to improve processes or methods so that outcomes are more effective and efficient
- Achieve measurable improvement in the highest priority areas
- Eliminate repeated deficient practices

DISCUSSIONS WITH CONTRACTORS

The findings made by PHE should be discussed directly with supervisors for each cleaning contractor, including potentially sharing this document with them. Each of the deficiencies should be identified, and the recommendations for correction should be explored. It is possible that the contractors may identify and suggest other corrective measures as alternatives to those suggested in this document. As long as the same goal is reached, any alternative or additional procedures can be implemented as well.

PERIODIC RE-INSPECTIONS

As part of the existing scope of work, PHE is scheduled to conduct one additional follow-up site inspection to ensure that the contractors are adhering to the recommended protocols and that noted deficiencies have been corrected. As part of the follow-up inspection, PHE will hold a short, informal out-brief at the end of each day to discuss any findings or other observations made and present options for correction.

PHE also recommends that DC DOC personnel perform additional inspections, as needed, based on the results of the PHE follow-up inspections, if deficiencies continue to be identified.

EFFECTIVENESS EVALUATION

The DC DOC will continue to check the temperature of personnel arriving onsite and require face masks for the foreseeable future. The DC DOC will also continue to perform voluntary testing of individuals onsite (both employees and inmates) every two weeks. As the year continues on, it is likely that additional waves or peaks in the number of virus cases may be observed throughout the region. DC DOC should closely monitor the number of persons onsite testing positive for COVID-19 during these times to evaluate the effectiveness of all current procedures, including cleaning and disinfection. Changes should be made, as applicable and appropriate, to ensure that each facility is doing as much as possible to protect all personnel (employees, inmates, contractors, and visitors) from the virus.

Ex N

Environmental Sanitarian CS-1801-12

INTRODUCTION

This position is located in the Department of Corrections (DOC), Office of Accreditation and Compliance located inside the Central Detention Facility (CDF), and Correctional Treatment Facility (CTF). The operational focus is to ensure facilities' compliance with applicable life/health safety rules, regulations, and guidance.

The position provides environmental safety and sanitation oversight for the DOC facilities. Environmental Sanitarian (ES) ensures that the DOC cleaning contractors adhere to the DOC cleaning protocol and that all facilities are clean, sanitary and environmentally safe, and the facilities and equipment are maintained in good working order/condition as well as the laundry operations, barber and cosmetology, and commissary areas.

MAJOR DUTIES

Plans, designs, develops, and coordinates correctional environmental safety and sanitation initiatives; and serves in a key supporting role for the implementation of strategic departmental initiatives focusing on core correctional business needs and on support requirements as it relates to environmental safety and sanitation of the CDF and CTF.

Ensures day-to-day oversight for compliance with applicable regulations, codes and standards relevant to the mission and goals; coordinates inspections conducted by the DC Department of Health (DOH) and conducts comprehensive and thorough inspections to ensure that the facilities are compliant.

Maintains a manual and automated reporting system to keep up to date with inspection schedules and cleaning squads/crews; and coordinates with department managers, supervisors, officers, and employees regarding the cleaning and inspection schedules.

Provides instructions and guidelines to detail squads; replenishes/orders supplies and tools for cleaning purposes, and documents whether the operation is compliant with prevention, identification and abatement activities. Addresses departmental issues and key initiatives; and assists in the development of funding and resource proposals to support program initiatives.

Recommends revisions to internal policies to avoid conflicts regarding how to accomplish mission and goals of the program; and interfaces with key officials within the Department, with other Federal and District Government agencies and the private sector in the course of working out administrative systems and procedures that are inherent in attaining the goals.

Ensures and assesses the inspections of all facility areas e.g., weekly/monthly/annually; collaborates with supervisors and managers to designate employees to conduct regular internal inspections to identify and document deficiencies.

Ensures sanitation supplies are available for distribution; and are distributed to the units based on an approved schedule. Collaborates with correctional officers and supervisors to ensure cleaning equipment is utilized in the proper manner and makes inspections a part of their daily tasks.

Makes rounds with designated staff. Rounds shall include inspections of showers, dayrooms, on-unit classrooms and recreation areas, chase closets and storage area supply closets, tiers, and the control bubble. Inspections require each program manager or designee to be present when the SIS performs inspections of areas such as the medical unit, the warehouse, storage rooms, shops, commissary, food services, etc. It is expected that joint inspections shall result in collaborative resolutions.

Collaborates with the Facilities Maintenance manager regarding repairs, based on schedule, visits housing units to conduct a general visual inspection for cleanliness and ensures that adequate cleaning supplies are available and equipment and fixtures are operational in common areas.

Reviews inspection reports of cells and ensures cells are free from graffiti and peeling paint. Managers affected by this report are responsible for preparing a closed out Corrective Action Plan (CAP) to the SIS and appropriate DOC manager official. The SIS follows up on the CAP to ensure adequate corrective action is taken in a timely manner.

Evaluates performance management for operational efficiency and support services for effectiveness; and participates in scheduled or random audit reviews of internal programs offices. Evaluates and documents results of each program audit; and prescribes corrective action or remediation in difficult and complex work assignments.

Develops new approaches, methods, or procedures in data gathering and analysis techniques; and recognizes and resolves discrepancies and/or inconsistencies among the findings.

Makes sure cellblock control modules, administrative areas, office areas, medical unit, Inmate Reception Center (IRC), and other areas are thoroughly cleaned; and coordinates with maintenance staff for cleaning air vents, windows and high walls.

Maintains documentation relevant to DOH inspections, corrective action plans and abatement schedules and determines the frequency of required treatments.

Keeps in contact with the DC Departments of Health, Occupational Safety and Health Administration, DC Fire and Emergency Management and other independent consultants.

Performs other related duties as assigned.

KNOWLEDGE REQUIRED BY THE POSITION

Must possess a Certificate or License as a Registered Sanitarian OR be able to obtain certification or licensing within 180 days of employment OR must meet the following minimum standards to sit for the certification exam:

a) Bachelor's Degree in Sanitary Science or Sanitary Engineering from an institution on the list of accredited colleges of the United States Office of Education, or any like institution approved by the Board. or

b) Bachelor's Degree with a minimum of thirty (30) semester hour's credit of basic sciences from an institution on the list of accredited colleges of the United States Office of Education (or any like institution approved by the Board), plus one (1) year full time experience in Environmental Health

Thorough knowledge of District, Federal and national standards for correctional management policies and procedures as it relates to environmental safety and sanitation of correctional facilities.

Thorough knowledge regarding standards, policies and procedures applicable to all facets of correctional operations.

Thorough knowledge of and skill in applying a wide range of complex inspection, and compliance principles, concepts, and practices; and thorough understanding of the operating problems in working in a correctional setting.

Ability to instruct squads of special detail inmate workforce ensuring compliance with applicable environmental health regulations, codes and standards; and an in-depth knowledge of the practices, procedures and responsibilities related to the operation and maintenance of adult detention facilities.

Ability to perform research, conduct meetings and coordinate group efforts in order to implement a cohesive environmental safety and sanitation program.

Ability to gather, assemble, and analyze facts, draw conclusions and interpret relevant regulations and policies.

Thorough knowledge and research skills to keep abreast of emerging standards and state of the art best practices for the correctional administration's environmental safety and sanitation program; and ability to ensure that the program is effectively operating.

Proficient in computer operations and software in order to maintain resource contact, develop spreadsheets/data bases, and report preparations as well as a tracking system.

SUPERVISORY CONTROLS

Works under the supervision of the Compliance and Review Officer, who outlines overall objectives and available resources and discusses projects, specific timelines, and determines the parameters of the SIS's responsibilities as well as the expected outcomes.

The incumbent determines the most appropriate avenues to pursue; decides the practices and methods to apply in all phases of assignments including the approach to take, and the depth and intensity needed; interprets policy and regulations and resolves most conflicts as they arise; coordinates squad details with others as required; and keeps the supervisor informed of progress and potentially controversial matters.

The work is not normally reviewed for methods used. Completed assignments are reviewed for soundness of overall approach; effectiveness in producing results; feasibility of recommendation and adherence to deadlines, compliance and requirements.

GUIDELINES

Guidelines include District and Federal regulations, standards, codes, manuals, department policies and procedures, American Correctional Association (ACA) expected practices, legislative requirements, and best practices and benchmarks from comparable jurisdictions that are relevant to environmental safety and sanitation. These are not completely applicable to the work or have gaps in specificity requiring the SIS to be resourceful and diligent when improvising and/or determining the best practice to use. Judgment is utilized when interpreting, adapting, applying, and deviating from guidelines. Analyzes the results of such adaptations and recommends changes in established methods and procedures.

COMPLEXITY

The work consists of a variety of complex tasks that involves planning, coordinating and providing advice regarding environmental safety and sanitation procedures. The work requires complex efforts in problem solving and analysis directed toward the appropriate resolution to specific issues, situations and problems. Also, the work may often involve interpretations of regulatory procedures and a high degree of precision and confidence, supplementing these conclusions with credible information from a variety of sources, defending conclusions and recommending resolutions to the critical problems encountered usually in writing, but often in briefing sessions before agency management. The work also consists of analyzing data from a variety of sources, considering the impact, interrelationships, and confirms the accuracy and authenticity of information, and resolves issues of contradictory, missing, or inconclusive data.

SCOPE AND EFFECT

The purpose of the work is designed to ensure the highest standards of management effectiveness, consistent with resource requirements, application practices and national standards for environmental safety and sanitation codes. Work efforts result in the disruption of large-scale organized activities and practices and procedures promotes the health, safety or fair treatment of a large population. The work may also result in improved planning and operational aspects of the program.

PERSONAL CONTACTS

Contacts are with upper and mid-level departmental management officials and supervisors, inmates, contractors, correctional officers/supervisors, etc.

PURPOSE OF CONTACTS

Purpose of Contacts involves frequent unstructured face-to-face meetings and contacts with institution staff, correctional professionals within and outside of the DOC and/or public officials. Provides expertise and advice on various matters associated with environmental safety and sanitation issues, collect and exchange information, prepare reports, analyze and resolve problems, develop new implementation strategies and proposes new approaches. Contacts are also made to establish rapport needed to the fulfillment of mission of the program, which address many areas of institutional operations. Other contacts may occur for the purpose of providing policy guidance, advice and/or training.

PHYSICAL DEMANDS

The work is primarily sedentary, however, the incumbent is subject to long periods of standing, walking, stooping or crouching during inspection process.

WORK ENVIRONMENT

Work is performed in both an office and correctional institutional facility environment. Administrative functions are performed in the office setting and inspections and investigations are performed in the facility.

OTHER SIGNIFICANT FACTS

NOTE: The incumbent is this position must provide a certificate of good standing as a Registered Sanitarian or proof of ability to sit for examination towards certification from the applicable state, local, or municipal authority.
NOTE: The incumbent of this position will be subject to enhanced suitability screening pursuant to Chapter 4 of DC Personnel Regulations, Suitability – **Safety Sensitive.**

Environmental Sanitarian CS-1801-12

The incumbent in this position is designated as an essential employee.

Flexibility in work schedule is required.

Prisoner in Transit Medical Summary

1. IDENTIFYING INFORMATION

Name (Last, First, MI): [redacted]

Age: [redacted] Gender: [redacted] DOB: [redacted]

USMS #: [redacted] Departure Date: 10/26/2020

Departed From: DC-DOC

Designated To: USMS

Mode of Transport *(Check all that apply)*: ☐ Air ☐ Ground

2. TUBERCULOSIS SCREENING

Tuberculosis Skin Test (TST) / PPD:

Date Placed:	Date Read:	Size in mm:
10-23-2020	10-25-2020	0mm

Tuberculosis Blood Test / IGRA (if applicable):

☐ Positive Date:
☐ Negative
☐ Indeterminate / Borderline

Chest x-ray done within past year (if indicated):

Date: Results:

Prisoner is cleared for transfer:

☐ NO
☒ YES

3. CURRENT MEDICAL ISSUES

Check all that apply to the prisoner and explain in the comments section:

☐ Hospitalizations within past month
☐ Seizure activity within past month
☐ Seizure disorder requiring medications
☐ Limited mobility (crutches, wheelchair)
☐ Has hard or air cast, splint or brace
☐ Prescription narcotic pain medications dispensed for travel
☐ Suicide watch/psychiatric decompensation within past month
☐ Contagious illness or quarantine within past month
☐ Cardiac chest pain within past month
☐ Stroke within past month
☐ Surgery within past month
☐ Diabetes requiring insulin or other medications

FEMALE PRISONERS: Is prisoner pregnant?

☐ NO ☐ YES If yes, how many weeks? N/A

4. SICKLE CELL SCREENING

Prisoner has a history of (check appropriate box):

☐ Sickle Cell Disease
☐ Sickle Cell Trait
☒ No History of Disease or Trait

If prisoner has disease or trait and is traveling by air, has JPATS Sickle Cell Protocol and Clearance been completed?

☐ NO ☐ YES Attach clearance to transfer summary

5. LIST ALLERGIES (Include drugs, foods, latex, etc.):

NKDA

6a. OTHER MEDICAL PROBLEMS	6b. MEDICATIONS DISPENSED WITH PRISONER FOR TRANSPORT (Should match medical problem if applicable. Include dosage, route, and frequency.)

7. COMMENTS (If additional space is needed, write on back, attach separate sheet of paper, or check this box to create a second page: ☐)

MANDATORY SYMPTOM SCREENING FOR COVID-19 PRIOR TO DEPARTURE FROM FACILITY

1. Temperature: 96.8 Date: 10/26/2020 Time: 05:50 PM
2. Complains of feeling feverish: ☐ Yes ☒ No
3. Presence of cough: ☐ Yes ☒ No
4. Difficulty breathing: ☐ Yes ☒ No

If temperature is 100.4F or greater OR answer is "Yes" to ANY other question, the prisoner is NOT CLEARED FOR TRANSFER until evaluated and cleared by a licensed independent practitioner who must complete Section 8 below as the "Certifying Health Authority".

Additional Comments:

Cleared by MH [redacted] LICSW Oct 26, 2020

8. CERTIFYING HEALTH AUTHORITY

I CERTIFY THAT THE PRISONER IS MEDICALLY CLEARED FOR TRAVEL.

Name (Print): [redacted] Title: MD

CDC 24/7: Saving Lives, Protecting People™

Interim Guidance on Management of Coronavirus Disease 2019 (COVID-19) in Correctional and Detention Facilities

Updated Dec. 3, 2020 Print

This interim guidance is based on what is currently known about the transmission and severity of coronavirus disease 2019 (COVID-19) as of the date of posting, October 7, 2020.

The US Centers for Disease Control and Prevention (CDC) will update this guidance as needed and as additional information becomes available. Please check the CDC website periodically for updated interim guidance.

This document provides interim guidance specific for correctional facilities and detention centers during the outbreak of COVID-19, to ensure continuation of essential public services and protection of the health and safety of incarcerated and detained persons, staff, and visitors. Recommendations may need to be revised as more information becomes available.

A revision was made 12/3/2020 to reflect the following:

COVID-19 (Coronavirus Disease)

MENU >

A revision was made 10/21/2020 to reflect the following:

- Updated language for the close contact definition.

A revision was made 10/7/2020 to reflect the following:

- Updated criteria for releasing individuals with confirmed COVID-19 from medical isolation (symptom-based approach).
- Added link to CDC Guidance for Performing Broad-Based Testing for SARS-CoV-2 in Congregate Settings
- Reorganized information on Quarantine into 4 sections: Contact Tracing, Testing Close Contacts, Quarantine Practices, and Cohorted Quarantine for Multiple Close Contacts

A revision was made 7/14/20 to reflect the following:

- Added testing and contact tracing considerations for incarcerated/detained persons (including testing newly incarcerated or detained persons at intake; testing close contacts of cases; repeated testing of persons in cohorts of quarantined close contacts; testing before release). Linked to more detailed Interim Considerations for SARS-CoV-2 Testing in Correctional and Detention Facilities.
- Added recommendation to consider testing and a 14-day quarantine for individuals preparing for release or transfer to another facility.
- Added recommendation that confirmed COVID-19 cases may be medically isolated as a cohort. (Suspected cases should be isolated individually.)
- Reduced recommended frequency of symptom screening for quarantined individuals to once per day (from twice per day).
- Added recommendation to ensure that PPE donning/doffing stations are set up directly outside spaces requiring PPE. Train staff to move from areas of lower to higher risk of exposure if they must re-use PPE due to shortages.
- Added recommendation to organize staff assignments so that the same staff are assigned to the same areas of the facility over time, to reduce the risk of transmission through staff movements.
- Added recommendation to suspend work release programs, especially those within other congregate settings, when there is a COVID-19 case in the correctional or detention facility.
- Added recommendation to modify work details so that they only include incarcerated/detained persons from a single housing unit.
- Added considerations for safely transporting individuals with COVID-19 or their close contacts.
- Added considerations for release and re-entry planning in the context of COVID-19.

Intended Audience

This document is intended to provide guiding principles for healthcare and non-healthcare administrators of correctional and detention facilities (including but not limited to federal and state prisons, local jails, and detention centers), law enforcement agencies that have custodial authority for detained populations (i.e., U.S. Immigration and Customs Enforcement and U.S. Marshals Service), and their respective health departments, to assist in preparing for potential introduction, spread, and mitigation of SARS-CoV-2 (the virus that causes Coronavirus Disease 2019, or COVID-19) in their facilities. In general, the document uses terminology referring to correctional environments but can also be applied to civil and pre-trial detention settings.

This guidance will not necessarily address every possible custodial setting and may not use legal terminology specific to individual agencies' authorities or processes.

The guidance may need to be adapted based on individual facilities' physical space, staffing, population, operations, and other resources and conditions. Facilities should contact CDC or their state, local, territorial, and/or tribal public health department if they need assistance in applying these principles or addressing topics that are not specifically covered in this guidance.

This guidance will not necessarily address every possible custodial setting and may not use legal terminology specific to individual agencies' authorities or processes.

The guidance may need to be adapted based on individual facilities' physical space, staffing, population, operations, and other resources and conditions. Facilities should contact CDC or their state, local, territorial, and/or tribal public health department if they need assistance in applying these principles or addressing topics that are not specifically covered in this guidance.

Guidance Overview

The guidance below includes detailed recommendations on the following topics related to COVID-19 in correctional and detention settings:

- ✓ Operational and communications preparations for COVID-19
- ✓ Enhanced cleaning/disinfecting and hygiene practices
- ✓ Social distancing strategies to increase space between individuals in the facility
- ✓ Strategies to limit transmission from visitors
- ✓ Infection control, including recommended personal protective equipment (PPE) and potential alternatives during PPE shortages
- ✓ Verbal screening and temperature check protocols for incoming incarcerated/detained individuals, staff, and visitors
- ✓ Testing considerations for SARS-CoV-2
- ✓ Medical isolation of individuals with confirmed and suspected COVID-19 and quarantine of close contacts, including considerations for cohorting when individual spaces are limited
- ✓ Healthcare evaluation for individuals with suspected COVID-19
- ✓ Clinical care for individuals with confirmed and suspected COVID-19
- ✓ Considerations for people who are at increased risk for severe illness from COVID-19

Definitions of Commonly Used Terms

Close contact of someone with COVID-19 – Someone who was within 6 feet of an infected person for a cumulative total of 15 minutes or more over a 24-hour period* starting from 2 days before illness onset (or, for asymptomatic patients, 2 days prior to test specimen collection) until the time the patient is isolated.

** Individual exposures added together over a 24-hour period (e.g., three 5-minute exposures for a total of 15 minutes). Data are limited, making it difficult to precisely define "close contact;" however, 15 cumulative minutes of exposure at a distance of 6 feet or less can be used as an operational definition for contact investigation. Factors to consider when defining close contact include proximity (closer distance likely increases exposure risk), the duration of exposure (longer exposure time likely increases exposure risk), whether the infected individual has symptoms (the period around onset of symptoms is associated with the highest levels of viral shedding), if the infected person was likely to generate respiratory aerosols (e.g., was coughing, singing, shouting), and other environmental factors (crowding, adequacy of ventilation, whether exposure was indoors or outdoors). Because the general public has not received training on proper selection and use of respiratory PPE, such as an N95, the determination of close contact should generally be made irrespective of whether the contact was wearing respiratory PPE. At this time, differential determination of close contact for those using fabric face coverings is not recommended.*

Cohorting – In this guidance, cohorting refers to the practice of isolating multiple individuals with laboratory-confirmed COVID-19 together or quarantining close contacts of an infected person together as a group due to a limited number of individual cells. While cohorting those with confirmed COVID-19 is acceptable, cohorting individuals with suspected COVID-19 is not recommended due to high risk of transmission from infected to uninfected individuals. See Quarantine and Medical Isolation sections below for specific details about ways to implement cohorting as a harm reduction strategy to minimize the risk of disease spread and adverse health outcomes.

Community transmission of SARS-CoV-2 – Community transmission of SARS-CoV-2 occurs when individuals are exposed to the virus through contact with someone in their local community, rather than through travel to an affected location. When community transmission is occurring in a particular area, correctional facilities and detention centers are more likely to start seeing infections inside their walls. Facilities should consult with local public health departments if assistance is needed to determine how to define "local community" in the context of SARS-CoV-2 spread. However, because all states have reported cases, all facilities should be vigilant for introduction of the virus into their populations.

Confirmed vs. suspected COVID-19 – A person has **confirmed COVID-19** when they have received a positive result from a COVID-19 viral test (antigen or PCR test) but they may or may not have symptoms. A person has **suspected COVID-19** if they show symptoms of COVID-19 but either have not been tested via a viral test or are awaiting test results. If their test result is positive, suspected COVID-19 is reclassified as confirmed COVID-19.

Incarcerated/detained persons – For the purpose of this document, "incarcerated/detained persons" refers to persons held in a prison, jail, detention center, or other custodial setting. The term includes those who have been sentenced (i.e., in prisons) as well as those held for pre-trial (i.e., jails) or civil purposes (i.e., detention centers). Although this guidance does not specifically reference individuals in every type of custodial setting (e.g., juvenile facilities, community confinement facilities), facility administrators can adapt this guidance to apply to their specific circumstances as needed.

Masks – Masks cover the nose and mouth and are intended to help prevent people who have the virus from transmitting it to others, even if they do not have symptoms. CDC recommends wearing cloth masks in public settings where social distancing measures are difficult to maintain. Masks are recommended as a simple barrier to help prevent respiratory droplets from traveling into the air and onto other people when the person wearing the mask coughs, sneezes, talks, or raises their voice. This is called source control. If everyone wears a mask in congregate settings, the risk of exposure to SARS-CoV-2 can be reduced. Anyone who has trouble breathing or is unconscious, incapacitated, younger than 2 years of age or otherwise unable to remove the mask without assistance should not wear a mask (for more details see How to Wear Masks). **CDC does not recommend use of masks for source control if they have an exhalation valve or**

vent). Individuals working under conditions that require PPE should not use a cloth mask when a surgical mask or N95 respirator is indicated (see Table 1). Surgical masks and N95 respirators should be reserved for situations where the wearer needs PPE. Detailed recommendations for wearing a mask can be found here.

Medical isolation – Medical isolation refers to separating someone with confirmed or suspected COVID-19 infection to prevent their contact with others to reduce the risk of transmission. Medical isolation ends when the individual meets pre-established criteria for release from isolation, in consultation with clinical providers and public health officials. In this context, isolation does NOT refer to punitive isolation for behavioral infractions within the custodial setting. Staff are encouraged to use the term "medical isolation" to avoid confusion, and should ensure that the conditions in medical isolation spaces are distinct from those in punitive isolation.

Quarantine – Quarantine refers to the practice of separating individuals who have had close contact with someone with COVID-19 to determine whether they develop symptoms or test positive for the disease. Quarantine reduces the risk of transmission if an individual is later found to have COVID-19. Quarantine for COVID-19 should last for 14 days after the exposure has ended. Ideally, each quarantined individual should be housed in a single cell with solid walls and a solid door that closes. If symptoms develop during the 14-day period, and/or a quarantined individual receives a positive viral test result for SARS-CoV-2, the individual should be placed under medical isolation and evaluated by a healthcare professional. If symptoms do not develop during the 14-day period and the individual does not receive a positive viral test result for SARS-CoV-2, quarantine restrictions can be lifted. (NOTE: Some facilities may also choose to implement a "routine intake quarantine," in which individuals newly incarcerated/detained are housed separately or as a group for 14 days before being integrated into general housing. This type of quarantine is conducted to prevent introduction of SARS-CoV-2 from incoming individuals whose exposure status is unknown, rather than in response to a known exposure to someone infected with SARS-CoV-2.)

- The best way to protect incarcerated/detained persons, staff, and visitors is to quarantine for 14 days. Check your local health department's website for information about options in your area to possibly shorten this quarantine period.

Social distancing – Social distancing is the practice of increasing the space between individuals and decreasing their frequency of contact to reduce the risk of spreading a disease (ideally to maintain at least 6 feet between all individuals, even those who are asymptomatic). Social distancing strategies can be applied on an individual level (e.g., avoiding physical contact), a group level (e.g., canceling group activities where individuals would be in close contact), and an operational level (e.g., rearranging chairs in the dining hall to increase distance between them). Social distancing can be challenging to practice in correctional and detention environments; examples of potential social distancing strategies for correctional and detention facilities are detailed in the guidance below. Social distancing is vital for the prevention of respiratory diseases such as COVID-19, especially because people who have been infected with SARS-CoV-2 but do not have symptoms can still spread the infection. Additional information about social distancing, including information on its use to reduce the spread of other viral illnesses, is available in this CDC publication [900 KB, 36 pages].

Staff – In this document, "staff" refers to all public or private-sector employees (e.g., contracted healthcare or food service workers) working within a correctional facility. Except where noted, "staff" does not distinguish between healthcare, custody, and other types of staff, including private facility operators.

Symptoms – Symptoms of COVID-19 include cough, shortness of breath or difficulty breathing, fever, chills, muscle pain, sore throat, and new loss of taste or smell. This list is not exhaustive. Other less common symptoms have been reported, including nausea and vomiting. Like other respiratory infections, COVID-19 can vary in severity from mild to severe, and

pneumonia, respiratory failure, and death are possible. COVID-19 is a novel disease, therefore the full range of signs and symptoms, the clinical course of the disease, and the individuals and populations at increased risk for severe illness are not yet fully understood. Monitor the CDC website for updates on symptoms.

Facilities with Limited Onsite Healthcare Services

Although many large facilities such as prisons and some jails employ onsite healthcare staff and have the capacity to evaluate incarcerated/detained persons for potential illness within a dedicated healthcare space, many smaller facilities do not. Some of these facilities have access to on-call healthcare staff or providers who visit the facility every few days. Others have neither onsite healthcare capacity nor onsite medical isolation/quarantine space and must transfer ill patients to other correctional or detention facilities or local hospitals for evaluation and care.

The majority of the guidance below is designed to be applied to any correctional or detention facility, either as written or with modifications based on a facility's individual structure and resources. However, topics related to healthcare evaluation and clinical care of persons with confirmed and suspected COVID-19 infection and their close contacts may not apply directly to facilities with limited or no onsite healthcare services. It will be especially important for these types of facilities to coordinate closely with their state, local, tribal, and/or territorial health department when they identify incarcerated/detained persons or staff with confirmed or suspected COVID-19, in order to ensure effective medical isolation and quarantine, necessary medical evaluation and care, and medical transfer if needed. The guidance makes note of strategies tailored to facilities without onsite healthcare where possible.

Note that all staff in any sized facility, regardless of the presence of onsite healthcare services, should observe guidance on recommended PPE in order to ensure their own safety when interacting with persons with confirmed or suspected COVID-19 infection.

COVID-19 Guidance for Correctional Facilities

Guidance for correctional and detention facilities is organized into 3 sections: Operational Preparedness, Prevention, and Management of COVID-19. Recommendations across these sections should be applied simultaneously based on the progress of the outbreak in a particular facility and the surrounding community.

- **Operational Preparedness.** This guidance is intended to help facilities prepare for potential SARS-CoV-2 transmission in the facility. Strategies focus on operational and communications planning, training, and personnel practices.
- **Prevention.** This guidance is intended to help facilities prevent spread of SARS-CoV-2 within the facility and between the community and the facility. Strategies focus on reinforcing hygiene practices; intensifying cleaning and disinfection of the facility; regular symptom screening for new intakes, visitors, and staff; continued communication with incarcerated/detained persons and staff; social distancing measures; as well as testing symptomatic and asymptomatic individuals in correctional and detention facilities. Refer to the Interim Guidance on Testing for SARS-CoV-2 in Correctional and Detention Facilities for additional considerations regarding testing in correctional and detention settings.
- **Management.** This guidance is intended to help facilities clinically manage persons with confirmed or suspected COVID-19 inside the facility and prevent further transmission of SARS-CoV-2. Strategies include medical isolation and care of incarcerated/detained persons with COVID-19 (including considerations for cohorting), quarantine and testing of close contacts, restricting movement in and out of the facility, infection control practices for interactions

with persons with COVID-19 and their quarantined close contacts or contaminated items, intensified social distancing, and cleaning and disinfecting areas where infected persons spend time.

Operational Preparedness

Administrators can plan and prepare for COVID-19 by ensuring that all persons in the facility know the symptoms of COVID-19 and the importance of reporting those symptoms if they develop. Other essential actions include developing contingency plans for reduced workforces due to absences, coordinating with public health and correctional partners, training staff on proper use of personal protective equipment (PPE) that may be needed in the course of their duties, and communicating clearly with staff and incarcerated/detained persons about these preparations and how they may temporarily alter daily life.

Communication and Coordination

✓ **Develop information-sharing systems with partners.**

- Identify points of contact in relevant state, local, tribal, and/or territorial public health departments before SARS-CoV-2 infections develop. Actively engage with the health department to understand in advance which entity has jurisdiction to implement public health control measures for COVID-19 in a particular correctional or detention facility.
- Create and test communications plans to disseminate critical information to incarcerated/detained persons, staff, contractors, vendors, and visitors as the pandemic progresses.
- Communicate with other correctional facilities in the same geographic area to share information including disease surveillance and absenteeism patterns among staff.
- Where possible, put plans in place with other jurisdictions to prevent individuals with confirmed or suspected COVID-19 and their close contacts from being transferred between jurisdictions and facilities unless necessary for medical evaluation, medical isolation/quarantine, clinical care, extenuating security concerns, release, or to prevent overcrowding.
- Stay informed about updates to CDC guidance via the CDC COVID-19 website as more information becomes known.

✓ **Review existing influenza, all-hazards, and disaster plans, and revise for COVID-19.**

- Train staff on the facility's COVID-19 plan. All personnel should have a basic understanding of COVID-19, how the disease is thought to spread, what the symptoms of the disease are, and what measures are being implemented and can be taken by individuals to prevent or minimize the transmission of SARS-CoV-2.
- Ensure that **separate** physical locations (dedicated housing areas and bathrooms) have been identified to 1) isolate individuals with confirmed COVID-19 (individually or cohorted), 2) isolate individuals with suspected COVID-19 (individually – do not cohort), and 3) quarantine close contacts of those with confirmed or suspected COVID-19 (ideally individually; cohorted if necessary). The plan should include contingencies for multiple locations if numerous infected individuals and/or close contacts are identified and require medical isolation or quarantine simultaneously. See Medical Isolation and Quarantine sections below for more detailed cohorting considerations.
- Facilities without onsite healthcare capacity should make a plan for how they will ensure that individuals with

suspected COVID-19 will be isolated, evaluated, tested, and provided necessary medical care.

- Make a list of possible social distancing strategies that could be implemented as needed at different stages of transmission intensity.
- Designate officials who will be authorized to make decisions about escalating or de-escalating response efforts as the disease transmission patterns change.

✓ **Coordinate with local law enforcement and court officials.**

- Identify legally acceptable alternatives to in-person court appearances, such as virtual court, as a social distancing measure to reduce the risk of SARS-CoV-2
- Consider options to prevent overcrowding (e.g., diverting new intakes to other facilities with available capacity, and encouraging alternatives to incarceration and other decompression strategies where allowable).

✓ **Encourage all persons in the facility to take the following actions to protect themselves and others from COVID-19. Post signs throughout the facility and communicate this information verbally on a regular basis. Sample signage and other communications materials are available on the CDC website.** Ensure that materials can be understood by non-English speakers and those with low literacy, and make necessary accommodations for those with cognitive or intellectual disabilities and those who are deaf, blind, or have low-vision.

- **For all:**
  - Practice good cough and sneeze etiquette: Cover your mouth and nose with your elbow (or ideally with a tissue) rather than with your hand when you cough or sneeze, and throw all tissues in the trash immediately after use.
  - Practice good hand hygiene: Regularly wash your hands with soap and water for at least 20 seconds, especially after coughing, sneezing, or blowing your nose; after using the bathroom; before eating; before and after preparing food; before taking medication; and after touching garbage.
  - Wear masks, unless PPE is indicated.
  - Avoid touching your eyes, nose, or mouth without cleaning your hands first.
  - Avoid sharing eating utensils, dishes, and cups.
  - Avoid non-essential physical contact.
- **For incarcerated/detained persons:**
  - the importance of reporting symptoms to staff
  - Social distancing and its importance for preventing COVID-19
  - Purpose of quarantine and medical isolation
- **For staff:**
  - Stay at home when sick
  - If symptoms develop while on duty, leave the facility as soon as possible and follow CDC-recommended steps for persons who are ill with COVID-19 symptoms including self-isolating at home, contacting a healthcare provider as soon as possible to determine whether evaluation or testing is needed, and contacting a supervisor.

Personnel Practices

✓ **Review the sick leave policies of each employer that operates within the facility.**

- Review policies to ensure that they are flexible, non-punitive, and actively encourage staff not to report to work when sick.
- Determine which officials will have the authority to send symptomatic staff home.

✓ **Identify duties that can be performed remotely.** Where possible, allowing staff to work from home can be an effective social distancing strategy to reduce the risk of SARS-CoV-2

✓ **Plan for staff absences.** Staff should stay home when they are sick, or they may need to stay home to care for a sick household member or care for children in the event of school and childcare dismissals.

- Identify critical job functions and plan for alternative coverage.
- Determine minimum levels of staff in all categories required for the facility to function safely. If possible, develop a plan to secure additional staff if absenteeism due to COVID-19 threatens to bring staffing to minimum levels.
- Review CDC guidance on safety practices for critical infrastructure workers (including correctional officers, law enforcement officers, and healthcare workers) who continue to work after a potential exposure to SARS-CoV-2.
- Consider increasing keep on person (KOP) medication orders to cover 30 days in case of healthcare staff shortages.

✓ **Consider offering revised duties to staff who are at increased risk for severe illness from COVID-19.** Persons at increased risk may include older adults and persons of any age with serious underlying medical conditions including lung disease, moderate to severe asthma, heart disease, chronic kidney disease, severe obesity, and diabetes. See CDC's website for a complete list and check regularly for updates as more data become available.

- Consult with occupational health providers to determine whether it would be allowable to reassign duties for specific staff members to reduce their likelihood of exposure to SARS-CoV-2.

✓ **Make plans in advance for how to change staff duty assignments to prevent unnecessary movement between housing units during a COVID-19**

- If there are people with COVID-19 inside the facility, it is **essential** for staff members to maintain a consistent duty assignment in the same area of the facility across shifts to prevent transmission across different facility areas.
- Where feasible, consider the use of telemedicine to evaluate persons with COVID-19 symptoms and other health conditions to limit the movement of healthcare staff across housing units.

✓ **Offer the seasonal influenza vaccine to all incarcerated/detained persons (existing population and new intakes) and staff throughout the influenza season.** Symptoms of COVID-19 are similar to those of influenza. Preventing influenza in a facility can speed the detection of COVID-19 and reduce pressure on healthcare resources.

✓ **Reference the Occupational Safety and Health Administration website for recommendations regarding worker health.**

✓ **Review CDC's guidance for businesses and employers** to identify any additional strategies the facility can use within its role as an employer, or share with others.

Operations, Supplies, and PPE Preparations

✓ **Ensure that sufficient stocks of hygiene supplies, cleaning supplies, PPE, and medical supplies (consistent with the healthcare capabilities of the facility) are on hand and available and have a plan in place to restock as needed.**

- Standard medical supplies for daily clinic needs
- Tissues
- Liquid or foam soap when possible. If bar soap must be used, ensure that it does not irritate the skin and thereby discourage frequent hand washing. Ensure a sufficient supply of soap for each individual.
- Hand drying supplies, such as paper towels or hand dryers
- Alcohol-based hand sanitizer containing at least 60% alcohol (where permissible based on security restrictions)
- Cleaning supplies, including EPA-registered disinfectants effective against SARS-CoV-2 , the virus that causes COVID-19
- Recommended PPE (surgical masks, N95 respirators, eye protection, disposable medical gloves, and disposable gowns/one-piece coveralls). See PPE section and Table 1 for more detailed information, including recommendations for extending the life of all PPE categories in the event of shortages, and when surgical masks are acceptable alternatives to N95s. Visit CDC's website for a calculator to help determine rate of PPE usage.
- Cloth face masks for source control
- SARS-CoV-2 specimen collection and testing supplies

✓ **Make contingency plans for possible PPE shortages during the COVID-19 pandemic, particularly for non-healthcare workers.**

- See CDC guidance optimizing PPE supplies.

✓ **Consider relaxing restrictions on allowing alcohol-based hand sanitizer in the secure setting, where security concerns allow.** If soap and water are not available, CDC recommends cleaning hands with an alcohol-based hand sanitizer that contains at least 60% alcohol. Consider allowing staff to carry individual-sized bottles for their personal hand hygiene while on duty, and place dispensers at facility entrances/exits and in PPE donning/doffing stations.

✓ **Provide a no-cost supply of soap to incarcerated/detained persons, sufficient to allow frequent hand washing.** (See Hygiene section below for additional detail regarding recommended frequency and protocol for hand washing.)

- Provide liquid or foam soap where possible. If bar soap must be used, ensure that it does not irritate the skin

and thereby discourage frequent hand washing, and ensure that individuals do not share bars of soap.

✓ **If not already in place, employers operating within the facility should establish a respiratory protection program as appropriate, to ensure that staff and incarcerated/detained persons are fit-tested for any respiratory protection they will need within the scope of their responsibilities.**

✓ **Ensure that staff and incarcerated/detained persons are trained to correctly don, doff, and dispose of PPE that they will need to use within the scope of their responsibilities.**

- See Table 1 for recommended PPE for incarcerated/detained persons and staff with varying levels of contact with persons with COVID-19 or their close contacts.
- Visit CDC's website for PPE donning and doffing training videos and job aids [2.9 MB, 3 pages].

✓ **Prepare to set up designated PPE donning and doffing areas outside all spaces where PPE will be used. These spaces should include:**

- A dedicated trash can for disposal of used PPE
- A hand washing station or access to alcohol-based hand sanitizer
- A poster demonstrating correct PPE donning and doffing procedures

✓ Review CDC and EPA guidance for cleaning and disinfecting of the facility.

Prevention

Cases of COVID-19 have been documented in all 50 US states. Correctional and detention facilities can prevent introduction of SARS-CoV-2 and reduce transmission if it is already inside by reinforcing good hygiene practices among incarcerated/detained persons, staff, and visitors (including increasing access to soap and paper towels), intensifying cleaning/disinfection practices, and implementing social distancing strategies.

Because many individuals infected with SARS-CoV-2 do not display symptoms, the virus could be present in facilities before infections are identified. Good hygiene practices, vigilant symptom screening, wearing cloth face masks (if not contraindicated), and social distancing are critical in preventing further transmission.

Testing symptomatic and asymptomatic individuals and initiating medical isolation for suspected and confirmed cases and quarantine for close contacts, can help prevent spread of SARS-CoV-2.

Operations

✓ **Stay in communication with partners about your facility's current situation.**

- State, local, territorial, and/or tribal health departments
- Other correctional facilities

✓ **Communicate with the public about any changes to facility operations, including visitation programs.**

✓ **Limit transfers of incarcerated/detained persons to and from other jurisdictions and facilities unless necessary for medical evaluation, medical isolation/quarantine, clinical care, extenuating security concerns, release, or to prevent overcrowding.**

- – **If a transfer is absolutely necessary:**
  - Perform verbal screening and a temperature check as outlined in the Screening section below, before the individual leaves the facility. If an individual does not clear the screening process, delay the transfer and follow the protocol for suspected COVID-19 infection – including giving the individual a cloth face mask (unless contraindicated), if not already wearing one, immediately placing them under medical isolation, and evaluating them for SARS-CoV-2
  - Ensure that the receiving facility has capacity to properly quarantine or isolate the individual upon arrival.
  - See Transportation section below on precautions to use when transporting an individual with confirmed or suspected COVID-19.

✓**Make every possible effort to modify staff assignments to minimize movement across housing units and other areas of the facility.** For example, ensure that the same staff are assigned to the same housing unit across shifts to prevent cross-contamination from units where infected individuals have been identified to units with no infections.

✓ **Consider suspending work release and other programs that involve movement of incarcerated/detained individuals in and out of the facility, especially if the work release assignment is in another congregate setting, such as a food processing plant.**

✓ **Implement lawful alternatives to in-person court appearances where permissible.**

✓ **Where relevant, consider suspending co-pays for incarcerated/detained persons seeking medical evaluation for possible COVID-19 symptoms, to remove possible barriers to symptom reporting.**

✓ **Limit the number of operational entrances and exits to the facility.**

✓ **Where feasible, consider establishing an on-site laundry option for staff so that they can change out of their uniforms, launder them at the facility, and wear street clothes and shoes home.** If on-site laundry for staff is not feasible, encourage them to change clothes before they leave the work site, and provide a location for them to do so. This practice may help minimize the risk of transmitting SARS-CoV-2 between the facility and the community.

Cleaning and Disinfecting Practices

✓ **Even if COVID-19 has not yet been identified inside the facility or in the surrounding community, implement intensified cleaning and disinfecting procedures according to the recommendations below. These measures can help prevent spread of SARS-CoV-2 if introduced, and if already present through asymptomatic infections.**

✓ **Adhere to CDC recommendations for cleaning and disinfection during the COVID-19 response.** Monitor these recommendations for updates.

- Visit the CDC website for a tool to help implement cleaning and disinfection.
- Several times per day, clean and disinfect surfaces and objects that are frequently touched, especially in common areas. Such surfaces may include objects/surfaces not ordinarily cleaned daily (e.g., doorknobs, light switches, sink handles, countertops, toilets, toilet handles, recreation equipment, kiosks, telephones, and computer equipment).
- Staff should clean shared equipment (e.g., radios, service weapons, keys, handcuffs) several times per day and when the use of the equipment has concluded.
- Use household cleaners and EPA-registered disinfectants effective against SARS-CoV-2, the virus that causes COVID-19 as appropriate for the surface.
- Follow label instructions for safe and effective use of the cleaning product, including precautions that should be taken when applying the product, such as wearing gloves and making sure there is good ventilation during use, and around people. Clean according to label instructions to ensure safe and effective use, appropriate product dilution, and contact time. Facilities may consider lifting restrictions on undiluted disinfectants (i.e., requiring the use of undiluted product), if applicable.

✓ **Consider increasing the number of staff and/or incarcerated/detained persons trained and responsible for cleaning common areas to ensure continual cleaning of these areas throughout the day.**

✓ **Ensure adequate supplies to support intensified cleaning and disinfection practices, and have a plan in place to restock rapidly if needed.**

Hygiene

✓ **Encourage all staff and incarcerated/detained persons to wear a cloth face mask as much as safely possible, to prevent transmission of SARS-CoV-2 through respiratory droplets that are created when a person talks, coughs, or sneezes ("source control").**

- Provide masks at no cost to incarcerated/detained individuals and launder them routinely.
- Clearly explain the purpose of masks and when their use may be contraindicated. Because many individuals with COVID-19 do not have symptoms, it is important for everyone to wear masks in order to protect each other: "My mask protects you, your mask protects me."
- Ensure staff know that cloth masks should not be used as a substitute for surgical masks or N95 respirators that may be required based on an individual's scope of duties. Cloth masks are not PPE but are worn to protect others in the surrounding area from respiratory droplets generated by the wearer.
- Surgical masks may also be used as source control but should be conserved for situations requiring PPE.

✓ **Reinforce healthy hygiene practices, and provide and continually restock hygiene supplies throughout the facility, including in bathrooms, food preparation and dining areas, intake areas, visitor entries and exits, visitation rooms and waiting rooms, common areas, medical, and staff-restricted areas (e.g., break rooms).**

✓ **Provide incarcerated/detained persons and staff no-cost access to:**

- **Soap** – Provide liquid or foam soap where possible. If bar soap must be used, ensure that it does not irritate the skin, as this would discourage frequent hand washing, and ensure that individuals are not sharing bars of soap.
- **Running water, and hand drying machines or disposable paper towels** for hand washing
- **Tissues** and (where possible) no-touch trash receptacles for disposal
- Face masks

✓ **Provide alcohol-based hand sanitizer with at least 60% alcohol where permissible based on security restrictions.** Consider allowing staff to carry individual-sized bottles to maintain hand hygiene.

✓ **Communicate that sharing drugs and drug preparation equipment can spread SARS-CoV-2 due to potential contamination of shared items and close contact between individuals.**

Testing for SARS-CoV-2

Correctional and detention facilities are high-density congregate settings that present unique challenges to implementing testing for SARS-CoV-2, the virus that causes COVID-19. Refer to Testing guidance for details regarding testing strategies in correctional and detention settings.

Prevention Practices for Incarcerated/Detained Persons

✓ **Provide cloth face masks (unless contraindicated) and perform pre-intake symptom screening and temperature checks for all new entrants in order to identify and immediately place individuals with symptoms under medical isolation. Screening should take place in an outdoor space prior to entry, in the sally port, or at the point of entry into the facility immediately upon entry, before beginning the intake process.** See Screening section below for the wording of screening questions and a recommended procedure to safely perform a temperature check. Staff performing temperature checks should wear recommended PPE (see PPE section below).

- **If an individual has symptoms of COVID-19:**
  - Require the individual to wear a mask (as much as possible, use cloth masks in order to reserve surgical masks for situations requiring PPE). Anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance should not wear a mask.
  - Ensure that staff who have direct contact with the symptomatic individual wear recommended PPE.
  - Place the individual under medical isolation and refer to healthcare staff for further evaluation. (See Infection Control and Clinical Care sections below.)
  - Facilities without onsite healthcare staff should contact their state, local, tribal, and/or territorial health department to coordinate effective medical isolation and necessary medical care. See Transport section and coordinate with the receiving facility.
- **If an individual is an asymptomatic close contact of someone with COVID-19:**
  - Quarantine the individual and monitor for symptoms at least once per day for 14 days. (See

Quarantine section below.)

- The best way to protect incarcerated/detained persons, staff, and visitors is to quarantine for 14 days. Check your local health department's website for information about options in your area to possibly shorten this quarantine period.
  - Facilities without onsite healthcare staff should contact their state, local, tribal, and/or territorial health department to coordinate effective quarantine and necessary medical care. See Transport section and coordinate with the receiving facility.

✓ **Consider strategies for testing asymptomatic incarcerated/detained persons without known SARS-CoV-2 exposure for early identification of SARS-CoV-2 in the facility.**

Implement social distancing strategies to increase the physical space between incarcerated/detained persons (ideally 6 feet between all individuals, regardless of symptoms), and to minimize mixing of individuals from different housing units. Strategies will need to be tailored to the individual space in the facility and the needs of the population and staff. Not all strategies will be feasible in all facilities. Example strategies with varying levels of intensity include:

- **Common areas:**
  - Enforce increased space between individuals in holding cells as well as in lines and waiting areas such as intake (e.g., remove every other chair in a waiting area).
- **Recreation:**
  - Choose recreation spaces where individuals can spread out
  - Stagger time in recreation spaces (clean and disinfect between groups).
  - Restrict recreation space usage to a single housing unit per space (where feasible).
- **Meals:**
  - Stagger meals in the dining hall (one housing unit at a time; clean and disinfect between groups).
  - Rearrange seating in the dining hall so that there is more space between individuals (e.g., remove every other chair and use only one side of the table).
  - Provide meals inside housing units or cells.
- **Group activities:**
  - Limit the size of group activities.
  - Increase space between individuals during group activities.
  - Suspend group programs where participants are likely to be in closer contact than they are in their housing environment.
  - Consider alternatives to existing group activities, in outdoor areas or other areas where individuals can spread out.
- **Housing:**
  - If space allows, reassign bunks to provide more space between individuals, ideally 6 feet or more in all directions. (Ensure that bunks are cleaned thoroughly if assigned to a new occupant.)
  - Arrange bunks so that individuals sleep head to foot to increase the distance between their faces.
  - Minimize the number of individuals housed in the same room as much as possible.

- Rearrange scheduled movements to minimize mixing of individuals from different housing areas.

- **Work details:**
  - Modify work detail assignments so that each detail includes only individuals from a single housing unit.
- **Medical:**
  - If possible, designate a room near each housing unit to evaluate individuals with COVID-19 symptoms, rather than having them walk through the facility to be evaluated in the medical unit. If this is not feasible, consider staggering individuals' sick call visits.
  - Stagger pill line, or stage pill line within individual housing units.
  - Identify opportunities to implement telemedicine to minimize the movement of healthcare staff across multiple housing units and to minimize the movement of ill individuals through the facility.
  - Designate a room near the intake area to evaluate new entrants who are flagged by the intake symptom screening process before they move to other parts of the facility.

✓ **Note that if group activities are discontinued, it will be important to identify alternative forms of activity to support the mental health of incarcerated/detained persons.**

✓ **Provide up-to-date information about COVID-19 to incarcerated/detained persons on a regular basis.** As much as possible, provide this information in person and allow opportunities for incarcerated/detained individuals to ask questions (e.g., town hall format if social distancing is feasible, or informal peer-to-peer education). Updates should address:

- Symptoms of COVID-19 and its health risks
- Reminders to report COVID-19 symptoms to staff at the first sign of illness
  - Address concerns related to reporting symptoms (e.g., being sent to medical isolation), explain the need to report symptoms immediately to protect everyone, and explain the differences between medical isolation and solitary confinement.
- Reminders to use masks as much as possible
- Changes to the daily routine and how they can contribute to risk reduction

Prevention Practices for Staff

✓ **When feasible and consistent with security priorities, encourage staff to maintain a distance of 6 feet or more from an individual with COVID-19 symptoms while interviewing, escorting, or interacting in other ways, and to wear recommended PPE if closer contact is necessary.**

✓ **Ask staff to keep interactions with individuals with COVID-19 symptoms as brief as possible.**

✓ **Remind staff to stay at home if they are sick.** Ensure staff are aware that they will not be able to enter the facility if they have symptoms of COVID-19, and that they will be expected to leave the facility as soon as possible if they develop symptoms while on duty.

✓ **Consider strategies for testing asymptomatic staff without known SARS-CoV-2 exposure** for early identification of SARS-CoV-2 in the facility.

- Follow guidance from the Equal Employment Opportunity Commission when offering testing to staff. **Any time a positive test result is identified, relevant employers should:**
  - Ensure that the individual is rapidly notified, connected to appropriate medical care, and advised how to self-isolate.
  - Inform other staff about their possible exposure in the workplace but should maintain the infected employee's confidentiality as required by the Americans with Disabilities Act .

✓ **Perform verbal screening and temperature checks for all staff daily on entry.** See Screening section below for wording of screening questions and a recommended procedure to safely perform temperature checks.

- In very small facilities with only a few staff, consider self-monitoring or virtual monitoring (e.g., reporting to a central authority via phone).
- Send staff home who do not clear the screening process, and advise them to follow CDC-recommended steps for persons who are ill with COVID-19 symptoms.

✓ **Provide staff with up-to-date information about COVID-19 and about facility policies on a regular basis, including:**

- Symptoms of COVID-19 and its health risks
- Employers' sick leave policy

✓ **If staff develop a fever or other symptoms of COVID-19 while at work**, they should immediately put on a mask (if not already wearing one), inform their supervisor, leave the facility, and follow CDC-recommended steps for persons who are ill with COVID-19 symptoms.

✓ **Staff identified as close contacts of someone with COVID-19 should self-quarantine at home for 14 days, unless a shortage of critical staff precludes quarantine.**

- Staff identified as close contacts should self-monitor for symptoms and seek testing.
- Refer to CDC guidelines for further recommendations regarding home quarantine.
- The best way to protect incarcerated/detained persons, staff, and visitors is to quarantine for 14 days. Check your local health department's website for information about options in your area to possibly shorten this quarantine period.
- **To ensure continuity of operations, critical infrastructure workers (including corrections officers, law enforcement officers, and healthcare staff) may be permitted to continue work following potential exposure to SARS-CoV-2 , provided that they remain *asymptomatic* and additional precautions are implemented to protect them and others.**
  - **Screening:** The facility should ensure that temperature and symptom screening takes place daily before the staff member enters the facility.
  - **Regular Monitoring:** The staff member should self-monitor under the supervision of their employer's occupational health program. If symptoms develop, they should follow CDC guidance on isolation with COVID-19 symptoms.
  - **Wear a Mask:** The staff member should wear a mask (unless contraindicated) at all times while in the workplace for 14 days after the last exposure (if not already wearing one due to universal use of masks).

- **Social Distance:** The staff member should maintain 6 feet between themselves and others and practice social distancing as work duties permit.
- **Disinfect and Clean Workspaces:** The facility should continue enhanced cleaning and disinfecting practices in all areas including offices, bathrooms, common areas, and shared equipment.

✓ **Staff with confirmed or suspected COVID-19 should inform workplace and personal contacts immediately. These staff should be required to meet CDC criteria for ending home isolation before returning to work.** Monitor CDC guidance on discontinuing home isolation regularly, as circumstances evolve rapidly.

Prevention Practices for Visitors

✓ **Restrict non-essential vendors, volunteers, and tours from entering the facility.**

✓ **If possible, communicate with potential visitors to discourage contact visits in the interest of their own health and the health of their family members and friends inside the facility.**

✓ **Require visitors to wear masks (unless contraindicated), and perform verbal screening and temperature checks for all visitors and volunteers on entry.** See Screening section below for wording of screening questions and a recommended procedure to safely perform temperature checks.

- Staff performing temperature checks should wear recommended PPE.
- Exclude visitors and volunteers who do not clear the screening process or who decline screening.

✓ **Provide alcohol-based hand sanitizer with at least 60% alcohol in visitor entrances, exits, and waiting areas.**

✓ **Provide visitors and volunteers with information to prepare them for screening.**

- Instruct visitors to postpone their visit if they have COVID-19 symptoms.
- If possible, inform potential visitors and volunteers before they travel to the facility that they should expect to be screened for COVID-19 (including a temperature check), and will be unable to enter the facility if they do not clear the screening process or if they decline screening.
- Display signage outside visiting areas explaining the COVID-19 symptom screening and temperature check process. Ensure that materials are understandable for non-English speakers and those with low literacy.

✓ **Promote non-contact visits:**

- Encourage incarcerated/detained persons to limit in-person visits in the interest of their own health and the health of their visitors.
- Consider reducing or temporarily eliminating the cost of phone calls for incarcerated/detained persons.
- Consider increasing incarcerated/detained persons' telephone privileges to promote mental health and reduce exposure from direct contact with community visitors.

✓ **Consider suspending or modifying visitation programs, if legally permissible. For example, provide access to virtual visitation options where available.**

- If moving to virtual visitation, clean electronic surfaces regularly after each use. (See Cleaning guidance below for instructions on cleaning electronic surfaces.)
- Inform potential visitors of changes to, or suspension of, visitation programs.
- Clearly communicate any visitation program changes to incarcerated/detained persons, along with the reasons for them (including protecting their health and their family and community members' health).
- If suspending contact visits, provide alternate means (e.g., phone or video visitation) for incarcerated/detained individuals to engage with legal representatives, clergy, and other individuals with whom they have legal right to consult.

NOTE: Suspending visitation should only be done in the interest of incarcerated/detained persons' physical health and the health of the general public. Visitation is important to maintain mental health. If visitation is suspended, facilities should explore alternative ways for incarcerated/detained persons to communicate with their families, friends, and other visitors in a way that is not financially burdensome for them.

Management

If there is an individual with suspected COVID-19 inside the facility (among incarcerated/detained persons, staff, or visitors who have recently been inside), begin implementing Management strategies while test results are pending. Essential Management strategies include placing individuals with suspected or confirmed COVID-19 under medical isolation, quarantining their close contacts, and facilitating necessary medical care, while observing relevant infection control and environmental disinfection protocols and wearing recommended PPE.

Testing symptomatic and asymptomatic individuals (incarcerated or detained individuals and staff) and initiating medical isolation for suspected and confirmed cases and quarantine for close contacts, can help prevent spread of SARS-CoV-2 in correctional and detention facilities. Continue following recommendations outlined in the Preparedness and Prevention sections above.

Operations

✓ **Coordinate with state, local, tribal, and/or territorial health departments.** When an individual has suspected or confirmed COVID-19, notify public health authorities and request any necessary assistance with medical isolation, evaluation, and clinical care, and contact tracing and quarantine of close contacts. See Medical Isolation, Quarantine and Clinical Care sections below.

✓ **Implement alternate work arrangements deemed feasible in the Operational Preparedness section.**

✓ **Suspend all transfers of incarcerated/detained persons to and from other jurisdictions and facilities (including work release), unless necessary for medical evaluation, medical isolation/quarantine, health care, extenuating security concerns, release, or to prevent overcrowding.**

✓ **Set up PPE donning/doffing stations as described in the Preparation section.**

✓ **If possible, consider quarantining all new intakes for 14 days before they enter the facility's general population (separately from other individuals who are quarantined due to contact with someone who has COVID-19).** This practice is referred to as **routine intake quarantine.**

✓ **Consider testing all newly incarcerated/detained persons before they join the rest of the population in the correctional or detention facility.**

✓ **Minimize interactions between incarcerated/detained persons living in different housing units, to prevent transmission from one unit to another.** For example, stagger mealtimes and recreation times, and consider implementing broad movement restrictions.

✓ **Ensure that work details include only incarcerated/detained persons from a single housing unit, supervised by staff who are normally assigned to the same housing unit.**

- If a work detail provides goods or services for other housing units (e.g., food service or laundry), ensure that deliveries are made with extreme caution. For example, have a staff member from the work detail deliver prepared food to a set location, leave, and have a staff member from the delivery location pick it up. Clean and disinfect all coolers, carts, and other objects involved in the delivery.

✓ **Incorporate COVID-19 prevention practices into release planning.**

- Consider implementing a release quarantine (ideally in single cells) for 14 days prior to individuals' projected release date.
- The best way to protect incarcerated/detained persons, staff, and visitors is to quarantine for 14 days. Check your local health department's website for information about options in your area to possibly shorten this quarantine period.
  - Screen all releasing individuals for COVID-19 symptoms and perform a temperature check (see Screening section below.)
    - If an individual does not clear the screening process, follow the protocol for suspected COVID-19 – including giving the individual a mask, if not already wearing one, immediately placing them under medical isolation, and evaluating them for SARS-CoV-2 testing.
    - If the individual is released from the facility before the recommended medical isolation period is complete, discuss release of the individual with state, local, tribal, and/or territorial health departments to ensure safe medical transport and continued shelter and medical care, as part of release planning. Make direct linkages to community resources to ensure proper medical isolation and access to medical care.
    - Before releasing an incarcerated/detained individual who has confirmed or suspected COVID-19, or who is a close contact of someone with COVID-19, contact local public health officials to ensure they are aware of the individual's release and anticipated location. If the individual will be released to a community-based facility, such as a homeless shelter, contact the facility's staff to ensure adequate time for them to prepare to continue medical isolation or quarantine as needed.

✓ **Incorporate COVID-19 prevention practices into re-entry programming.**

- Ensure that facility re-entry programs include information on accessing housing, social services, mental health services, and medical care within the context of social distancing restrictions and limited community business

operations related to COVID-19.

- Provide individuals about to be released with COVID-19 prevention information, hand hygiene supplies, and masks.
- Link individuals who need medication-assisted treatment for opioid use disorder to substance use, harm reduction, and/or recovery support systems . If the surrounding community is under movement restrictions due to COVID-19, ensure that referrals direct releasing individuals to programs that are continuing operations.
- Link releasing individuals to Medicaid enrollment and healthcare resources , including continuity of care for chronic conditions that may place an individual at increased risk for severe illness from COVID-19.
- When possible, encourage releasing individuals to seek housing options among their family or friends in the community, to prevent crowding in other congregate settings such as homeless shelters. When linking individuals to shared housing, link preferentially to accommodations with the greatest capacity for social distancing.

Hygiene

✓ **Continue to ensure that hand hygiene supplies are well-stocked in all areas of the facility** (see above).

✓ **Continue to emphasize practicing good hand hygiene and cough etiquette** (see above).

Cleaning and Disinfecting Practices

✓ **Continue adhering to recommended cleaning and disinfection procedures for the facility at large** (see above).

✓ **Reference specific cleaning and disinfection procedures for areas where individuals with COVID-19 spend time** (see below).

Management of Incarcerated/Detained Persons with COVID-19 Symptoms

NOTE: Some recommendations below apply primarily to facilities with onsite healthcare capacity. Facilities without onsite healthcare capacity or without sufficient space for medical isolation should coordinate with local public health officials to ensure that individuals with suspected COVID-19 will be effectively isolated, evaluated, tested (if indicated), and given care.

✓ **Staff interacting with incarcerated/detained individuals with COVID-19 symptoms should wear recommended PPE** (see Table 1).

✓ **If possible, designate a room near each housing unit for healthcare staff to evaluate individuals with COVID-19 symptoms, rather than having symptomatic individuals walk through the facility to be evaluated in the medical unit.**

✓ **Incarcerated/detained individuals with COVID-19 symptoms should wear a mask (if not already wearing one, and unless contraindicated) and should be placed under medical isolation immediately. See Medical Isolation section below.**

✓ **Medical staff should evaluate symptomatic individuals to determine whether SARS-CoV-2 testing is indicated.** Refer to CDC guidelines for information on evaluation and testing. See Infection Control and Clinical Care sections below as well. Incarcerated/detained persons with symptoms are included in the high-priority group for testing in CDC's recommendations due to the high risk of transmission within congregate settings.

- If the individual's SARS-CoV-2 test is positive, continue medical isolation. (See Medical Isolation section below.)
- If the SARS-CoV-2 test is negative, the individual can be returned to their prior housing assignment unless they require further medical assessment or care or if they need to be quarantined as a close contact of someone with COVID-19.

✓ **Work with public health or private labs, as available, to access testing supplies or services.**

Medical Isolation of Individuals with Confirmed or Suspected COVID-19

NOTE: Some recommendations below apply primarily to facilities with onsite healthcare capacity. Facilities without onsite healthcare capacity, or without sufficient space to implement effective medical isolation, should coordinate with local public health officials to ensure that individuals with confirmed or suspected COVID-19 will be appropriately isolated, evaluated, tested, and given care.

✓ **As soon as an individual develops symptoms of COVID-19 or tests positive for SARS-CoV-2 they should be given a mask (if not already wearing one and if it can be worn safely), immediately placed under medical isolation in a separate environment from other individuals, and medically evaluated.**

✓ **Ensure that medical isolation for COVID-19 is distinct from punitive solitary confinement of incarcerated/detained individuals, both in name and in practice.**

Because of limited individual housing spaces within many correctional and detention facilities, infected individuals are often placed in the same housing spaces that are used for solitary confinement. To avoid being placed in these conditions, incarcerated/detained individuals may be hesitant to report COVID-19 symptoms, leading to continued transmission within shared housing spaces and, potentially, lack of health care and adverse health outcomes for infected individuals who delay reporting symptoms. Ensure that medical isolation is *operationally* distinct from solitary confinement, even if the same housing spaces are used for both. For example:

- Ensure that individuals under medical isolation receive regular visits from medical staff and have access to mental health services.
- Make efforts to provide similar access to radio, TV, reading materials, personal property, and commissary as would be available in individuals' regular housing units.
- Consider allowing increased telephone privileges without a cost barrier to maintain mental health and connection with others while isolated.

- Communicate regularly with isolated individuals about the duration and purpose of their medical isolation period.

✓ **Keep the individual's movement outside the medical isolation space to an absolute minimum.**

- Provide medical care to isolated individuals inside the medical isolation space, unless they need to be transferred to a healthcare facility. See Infection Control and Clinical Care sections for additional details.
- Serve meals inside the medical isolation space.
- Exclude the individual from all group activities.
- Assign the isolated individual(s) a dedicated bathroom when possible. When a dedicated bathroom is not feasible, do not reduce access to restrooms or showers as a result. Clean and disinfect areas used by infected individuals frequently on an ongoing basis during medical isolation.

✓ **Ensure that the individual is wearing a mask if they must leave the medical isolation space for any reason, and whenever another individual enters.** Provide clean masks as needed. Masks should be washed routinely and changed when visibly soiled or wet.

✓ **If the facility is housing individuals with confirmed COVID-19 as a cohort:**

- **Only individuals with laboratory-confirmed COVID-19 should be placed under medical isolation as a cohort. Do not cohort those with confirmed COVID-19 with those with suspected COVID-19, with close contacts of individuals with confirmed or suspected COVID-19, or with those with undiagnosed respiratory infection who do not meet the criteria for suspected COVID-19.**
- Ensure that cohorted groups of people with confirmed COVID-19 wear masks whenever anyone else (including staff) enters the isolation space. (Anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance should not wear a mask.)
- When choosing a space to cohort groups of people with confirmed COVID-19, use a well-ventilated room with solid walls and a solid door that closes fully.
- Use one large space for cohorted medical isolation rather than several smaller spaces. This practice will conserve PPE and reduce the chance of cross-contamination across different parts of the facility.

✓ **If possible, avoid transferring infected individual(s) to another facility unless necessary for medical care. If transfer is necessary, see Transport section for safe transport guidance.**

✓ **Staff assignments to isolation spaces should remain as consistent as possible, and these staff should limit their movements to other parts of the facility as much as possible.** These staff should wear recommended PPE as appropriate for their level of contact with the individual under medical isolation (see PPE section below) and should limit their own movement between different parts of the facility.

- If staff must serve multiple areas of the facility, ensure that they change PPE when leaving the isolation space. If a shortage of PPE supplies necessitates reuse, ensure that staff move only from areas of low to high exposure risk while wearing the same PPE, to prevent cross-contamination. For example, start in a housing unit where no one is known to be infected, then move to a space used as quarantine for close contacts, and end in an isolation unit. Ensure that staff are highly trained in infection control practices, including use of recommended PPE.

✓ **Provide individuals under medical isolation with tissues and, if permissible, a lined no-touch trash receptacle.** Instruct them to:

- **Cover** their mouth and nose with a tissue when they cough or sneeze
- **Dispose** of used tissues immediately in the lined trash receptacle
- **Wash hands** immediately with soap and water for at least 20 seconds. If soap and water are not available, clean hands with an alcohol-based hand sanitizer that contains at least 60% alcohol (where security concerns permit). Ensure that hand washing supplies are continually restocked.

✓ **Maintain medical isolation at least until CDC criteria for discontinuing home-based isolation have been met. These criteria have changed since CDC corrections guidance was originally issued and may continue to change as new data become available. Monitor the sites linked below regularly for updates.** This content will not be outlined explicitly in this document due to the rapid pace of change.

- CDC's recommended strategy for release from home-based isolation can be found in the *Discontinuation of Isolation for Persons with COVID-19 Not in Healthcare Settings Interim Guidance*.
- Detailed information about the data informing the symptom-based strategy, and considerations for extended isolation periods for persons in congregate settings including corrections, can be found here.
- If persons will require ongoing care by medical providers, discontinuation of transmission-based precautions (PPE) should be based on similar criteria found here.

Cleaning Spaces where Individuals with COVID-19 Spend Time

✓ **Ensure that staff and incarcerated/detained persons performing cleaning wear recommended PPE.** (See PPE section below.)

✓ **Thoroughly and frequently clean and disinfect all areas where individuals with confirmed or suspected COVID-19 spend time.**

- After an individual has been medically isolated for COVID-19, close off areas that they have used prior to isolation. If possible, open outside doors and windows to increase air circulation in the area. Wait as long as practical, up to 24 hours under the poorest air exchange conditions (consult CDC Guidelines for Environmental Infection Control in Health-Care Facilities for wait time based on different ventilation conditions) before beginning to clean and disinfect, to minimize potential for exposure to respiratory droplets.
- Clean and disinfect all areas (e.g., cells, bathrooms, and common areas) used by the infected individual, focusing especially on frequently touched surfaces (see list above in Prevention section).
- Clean and disinfect areas used by infected individuals on an ongoing basis during medical isolation.

✓ **Hard (non-porous) surface cleaning and disinfection**

- If surfaces are soiled, they should be cleaned using a detergent or soap and water prior to disinfection.
- Consult the list of products that are EPA-approved for use against the virus that causes COVID-19 . Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).

- If EPA-approved disinfectants are not available, diluted household bleach solutions can be used if appropriate for the surface. Unexpired household bleach will be effective against coronaviruses when properly diluted.
  - Use bleach containing 5.25%–8.25% sodium hypochlorite. Do not use a bleach product if the percentage is not in this range or is not specified.
  - Follow the manufacturer's application instructions for the surface, ensuring a contact time of at least 1 minute.
  - Ensure proper ventilation during and after application.
  - Check to ensure the product is not past its expiration date.
  - Never mix household bleach with ammonia or any other cleanser. This can cause fumes that may be very dangerous to breathe in.
- Prepare a bleach solution by mixing:
  - 5 tablespoons (1/3rd cup) of 5.25%–8.25% bleach per gallon of room temperature water

    OR
  - 4 teaspoons of 5.25%–8.25% bleach per quart of room temperature water
- Bleach solutions will be effective for disinfection up to 24 hours.
- Alcohol solutions with at least 70% alcohol may also be used.

✓ **Soft (porous) surface cleaning and disinfection**

- For soft (porous) surfaces such as carpeted floors and rugs, remove visible contamination if present and clean with appropriate cleaners indicated for use on these surfaces. After cleaning:
  - If the items can be laundered, launder items in accordance with the manufacturer's instructions using the warmest appropriate water setting for the items and then dry items completely.
  - Otherwise, use products that are EPA-approved for use against the virus that causes COVID-19 and are suitable for porous surfaces.

✓ **Electronics cleaning and disinfection**

- For electronics such as tablets, touch screens, keyboards, and remote controls, remove visible contamination if present.
  - Follow the manufacturer's instructions for all cleaning and disinfection products.
  - Consider use of wipeable covers for electronics.
  - If no manufacturer guidance is available, consider the use of alcohol-based wipes or spray containing at least 70% alcohol to disinfect touch screens. Dry surfaces thoroughly to avoid pooling of liquids.

  Additional information on cleaning and disinfection of communal facilities such can be found on CDC's website.

✓ **Food service items.** Individuals under medical isolation should throw disposable food service items in the trash in their medical isolation room. Non-disposable food service items should be handled with gloves and washed following food safety requirements. Individuals handling used food service items should clean their hands immediately after removing gloves.

✓ **Laundry from individuals with COVID-19 can be washed with other's laundry.**

- Individuals handling laundry from those with COVID-19 should wear a mask, disposable gloves, and a gown, discard after each use, and clean their hands immediately after.
- Do not shake dirty laundry. This will minimize the possibility of dispersing virus through the air. Ensure that individuals performing cleaning wear recommended PPE (see PPE section below).
- Launder items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely.
- Clean and disinfect clothes hampers according to guidance above for surfaces. If permissible, consider using a bag liner that is either disposable or can be laundered.

Transporting Individuals with Confirmed and Suspected COVID-19 and Quarantined Close Contacts

✓ **Refer to CDC guidance for Emergency Medical Services (EMS) on safely transporting individuals with confirmed or suspected COVID-19.** This guidance includes considerations for vehicle type, air circulation, communication with the receiving facility, and cleaning the vehicle after transport.

- If the transport vehicle is not equipped with the features described in the EMS guidance, at minimum drive with the windows down and ensure that the fan is set to high, in non-recirculating mode. If the vehicle has a ceiling hatch, keep it open.

✓ **Use the same precautions when transporting individuals under quarantine as close contacts of someone with COVID-19.**

✓ **See Table 1 for the recommended PPE for staff transporting someone with COVID-19.**

Managing Close Contacts of Individuals with COVID-19

NOTE: Some recommendations below apply primarily to facilities with onsite healthcare capacity. Facilities without onsite healthcare capacity or without sufficient space to implement effective quarantine should coordinate with local public health officials to ensure that close contacts of individuals with COVID-19 will be effectively quarantined and medically monitored

Contact Tracing

✓ **To determine who is considered a close contact of an individual with COVID-19, see definition of close contact and the Interim Guidance on Developing a COVID-19 Case Investigation and Contact Tracing Plan** [12 Kb, 1 page] **for more information.**

✓ **Contact tracing can be a useful tool to help contain disease outbreaks. When deciding whether to perform contact tracing, consider the following:**

- Have a plan in place for how close contacts of individuals with COVID-19 will be managed, including quarantine logistics.

  Contact tracing can be especially impactful when:

- There is a small number of infected individuals in the facility or in a particular housing unit. Aggressively tracing close contacts can help curb transmission before many other individuals are exposed.
- The infected individual is a staff member or an incarcerated/detained individual who has had close contact with individuals from other housing units or with other staff. Identifying those close contacts can help prevent spread to other parts of the facility.
- The infected individual is a staff member or an incarcerated/detained individual who has recently visited a community setting. In this situation, identifying close contacts can help reduce transmission from the facility into the community.

- Contact tracing may be more feasible and effective in settings where incarcerated/detained individuals have limited contact with others (e.g., celled housing units), compared to settings where close contact is frequent and relatively uncontrolled (e.g., open dormitory housing units).
- If there is a large number of individuals with COVID-19 in the facility, contact tracing may become difficult to manage. Under such conditions, consider broad-based testing in order to identify infections and prevent further transmission.
- Consult CDC recommendations for Performing Broad-Based Testing for SARS-CoV-2 in Congregate Settings for further information regarding selecting a testing location, ensuring proper ventilation and PPE usage, setting up testing stations and supplies, and planning test-day operations.

Testing Close Contacts

✓ **Testing is recommended for all close contacts** [12 KB, 1 page] **of persons with SARS-CoV-2 infection, regardless of whether the close contacts have symptoms.**

- Medically isolate those who test positive to prevent further transmission (see Medical Isolation section above).
- Asymptomatic close contacts testing negative should be placed under quarantine precautions for 14 days from their last exposure.

Quarantine for Close Contacts (who test negative)

✓ **Incarcerated/detained persons who are close contacts of someone with confirmed or suspected COVID-19 (whether the infected individual is another incarcerated/detained person, staff member, or visitor) should be placed under quarantine for 14 days. (Refer to the Interim Guidance on Developing a COVID-19 Case Investigation and Contact Tracing Plan [12 KB, 1 page] for more information):**

- If a quarantined individual is tested again during quarantine and they remain negative, they should continue to quarantine for the full 14 days after last exposure and follow all recommendations of local public health authorities.
- If an individual is quarantined due to contact with someone with suspected COVID-19 who is subsequently tested and receives a negative result, they can be released from quarantine. See Interim Guidance on Testing for SARS-CoV-2 in Correctional and Detention Facilities for more information about testing strategies in correctional and detention settings.

- The best way to protect incarcerated/detained persons, staff, and visitors is to quarantine for 14 days. Check your local health department's website for information about options in your area to possibly shorten this quarantine period.

✓ **Quarantined individuals should be monitored for COVID-19 symptoms at least once per day including temperature checks.**

- See Screening section for a procedure to perform temperature checks safely on asymptomatic close contacts of someone with COVID-19.
- If an individual develops symptoms for SARS-CoV-2, they should be considered a suspected COVID-19 case, given a mask (if not already wearing one), and moved to medical isolation immediately (individually, and separately from those with confirmed COVID-19 and others with suspected COVID-19) and further evaluated. (See Medical Isolation section above.) If the individual is tested and receives a positive result, they can then be cohorted with other individuals with confirmed COVID-19.

✓ **Quarantined individuals can be released from quarantine restrictions if they have not developed COVID-19 symptoms and have not tested positive for SARS-CoV-2 for 14 days since their last exposure to someone who tested positive.**

✓ **Keep a quarantined individual's movement outside the quarantine space to an absolute minimum.**

- Provide medical evaluation and care inside or near the quarantine space when possible.
- Serve meals inside the quarantine space.
- Exclude the quarantined individual from all group activities.
- Assign the quarantined individual a dedicated bathroom when possible. When providing a dedicated bathroom is not feasible, do not reduce access to restrooms or showers as a result.

✓ **Restrict quarantined individuals from leaving the facility (including transfers to other facilities) during the 14-day quarantine period, unless released from custody or a transfer is necessary for medical care, infection control, lack of quarantine space, or extenuating security concerns.**

✓ **If a quarantined individual leaves the quarantine space for any reason, they should wear a mask (unless contraindicated) as source control, if not already wearing one.**

- Quarantined individuals housed as a cohort should wear masks at all times (see cohorted quarantine section below).
- Quarantined individuals housed alone should wear a mask whenever another individual enters the quarantine space.
- Anyone who has trouble breathing, or is unconscious, incapacitated or otherwise unable to remove the mask without assistance should not wear a mask.

✓ **Meals should be provided to quarantined individuals in their quarantine spaces.** Individuals under quarantine should throw disposable food service items in the trash. Non-disposable food service items should be handled with gloves and washed with hot water or in a dishwasher. Individuals handling used food service items should clean their hands immediately after removing gloves.

✓ **Laundry from quarantined individuals can be washed with others' laundry.**

- Individuals handling laundry from quarantined persons should wear a mask, disposable gloves, and a gown, discard after each use, and clean their hands immediately after.
- Do not shake dirty laundry. This will minimize the possibility of dispersing virus through the air.
- Launder items as appropriate in accordance with the manufacturer's instructions. If possible, launder items using the warmest appropriate water setting for the items and dry items completely.
- Clean and disinfect clothes hampers according to guidance above for surfaces. If permissible, consider using a bag liner that is either disposable or can be laundered.

✓ **Staff assignments to quarantine spaces should remain as consistent as possible, and these staff should limit their movements to other parts of the facility.** These staff should wear recommended PPE based on their level of contact with the individuals under quarantine (see PPE section below).

- If staff must serve multiple areas of the facility, ensure that they change PPE when leaving the quarantine space. If a shortage of PPE supplies necessitates reuse, ensure that staff move only from areas of low to high exposure risk while wearing the same PPE, to prevent cross-contamination.
- Staff supervising asymptomatic incarcerated/detained persons under routine intake quarantine (with no known exposure to someone with COVID-19) do not need to wear PPE but should still wear a mask as source control.

Cohorted Quarantine for Multiple Close Contacts (who test negative)

✓ **Facilities should make every possible effort to individually quarantine close contacts of individuals with confirmed or suspected COVID-19.** Cohorting multiple quarantined close contacts could transmit SARS-CoV-2 from those who are infected to those who are uninfected. Cohorting should only be practiced if there are no other available options.

✓ **In order of preference, multiple quarantined individuals should be housed:**

- **IDEAL:** Separately, in single cells with solid walls (i.e., not bars) and solid doors that close fully
- Separately, in single cells with solid walls but without solid doors
- As a cohort, in a large, well-ventilated cell with solid walls, a solid door that closes fully, and at least 6 feet of personal space assigned to each individual in all directions
- As a cohort, in a large, well-ventilated cell with solid walls and at least 6 feet of personal space assigned to each individual in all directions, but without a solid door
- As a cohort, in single cells without solid walls or solid doors (i.e., cells enclosed entirely with bars), preferably with an empty cell between occupied cells creating at least 6 feet of space between individuals. (Although individuals are in single cells in this scenario, the airflow between cells essentially makes it a cohort arrangement in the context of COVID-19.)
- As a cohort, in multi-person cells without solid walls or solid doors (i.e., cells enclosed entirely with bars), preferably with an empty cell between occupied cells. Employ social distancing strategies related to housing in the Prevention section to maintain at least 6 feet of space between individuals housed in the same cell.
- As a cohort, in individuals' regularly assigned housing unit but with no movement outside the unit (if an entire housing unit has been exposed – referred to as "quarantine in place"). Employ social distancing strategies related to housing in the Prevention section above to maintain at least 6 feet of space between individuals.

- Safely transfer to another facility with capacity to quarantine in one of the above arrangements. (See Transport) (NOTE – Transfer should be avoided due to the potential to introduce infection to another facility; proceed only if no other options are available.)

If the ideal choice does not exist in a facility, use the next best alternative as a harm reduction approach.

✓ **If cohorting close contacts is absolutely necessary, be especially mindful of those who are at increased risk for severe illness from COVID-19.** Ideally, they should not be cohorted with other quarantined individuals. If cohorting is unavoidable, make all possible accommodations to reduce exposure for the individuals with increased risk of severe illness. (For example, intensify social distancing strategies for individuals with increased risk.)

✓ **If single cells for isolation (of those with suspected COVID-19) and quarantine (of close contacts) are limited, prioritize them in rank order as follows to reduce the risk of further SARS-CoV-2 transmission and adverse health outcomes:**

- Individuals with suspected COVID-19 who are at increased risk for severe illness from COVID-19
- Others with suspected COVID-19
- Quarantined close contacts of someone with COVID-19 who are themselves at increased risk for severe illness from COVID-19

✓ If a facility must cohort quarantined close contacts, **all cohorted individuals should be monitored closely for symptoms of COVID-19, and those with symptoms should be placed under medical isolation immediately.**

✓ **If an individual who is part of a quarantined cohort becomes symptomatic:**

- **If the individual is tested for SARS-CoV-2 and receives a positive result:** the 14-day quarantine clock for the remainder of the cohort must be reset to 0.
- **If the individual is tested for SARS-CoV-2 and receives a negative result:** the 14-day quarantine clock for this individual and the remainder of the cohort does not need to be reset. This individual can return from medical isolation to the quarantine cohort for the remainder of the quarantine period as their symptoms and diagnosis allow.
- **If the individual is not tested for SARS-CoV-2:** the 14-day quarantine clock for the remainder of the cohort must be reset to 0.

✓ **Consider re-testing all individuals in a quarantine cohort every 3-7 days, and immediately place those who test positive under medical isolation.** This strategy can help identify and isolate infected individuals early and minimize continued transmission within the cohort.

✓ **Consider testing all individuals quarantined as close contacts of someone with suspected or confirmed COVID-19 at the end of the 14-day quarantine period, before releasing them from quarantine precautions.**

✓ **Do not add more individuals to an existing quarantine cohort after the 14-day quarantine clock has started.** Doing so would complicate the calculation of the cohort's quarantine period, and potentially introduce new sources of infection.

✓ Some facilities may choose to quarantine all new intakes for 14 days before moving them to the facility's general population as a general rule (not because they were exposed to someone with COVID-19). **Under this scenario, do not mix individuals undergoing routine intake quarantine with those who are quarantined due to COVID-19 exposure.**

Management Strategies for Incarcerated/Detained Persons without COVID-19 Symptoms

✓ **Provide clear information to incarcerated/detained persons about the presence of COVID-19 within the facility, and the need to increase social distancing and maintain hygiene precautions.**

- As much as possible, provide this information in person and allow opportunities for incarcerated/detained individuals to ask questions (e.g., town hall format if social distancing is feasible, or informal peer-to-peer education).
- Ensure that information is provided in a manner that can be understood by non-English speaking individuals and those with low literacy, and make necessary accommodations for those with cognitive or intellectual disabilities and those who are deaf or hard-of-hearing, blind, or have low-vision.

✓ **If individuals with COVID-19 have been identified among staff or incarcerated/detained persons anywhere in a facility, consider implementing regular symptom screening and temperature checks in housing units that have *not* yet identified infections, until no additional infections have been identified in the facility for 14 days.** Because some incarcerated/detained persons are hesitant to report symptoms, it is very important to monitor for symptoms closely even though doing so is resource intensive. See Screening section for a procedure to safely perform a temperature check.

✓ **Consider additional options to intensify social distancing** within the facility.

Management Strategies for Staff

✓ **Provide clear information to staff about the presence of COVID-19 within the facility, and the need to enforce universal use of masks (unless contraindicated) and social distancing and to encourage hygiene precautions.**

- As much as possible, provide this information in person (if social distancing is feasible) and allow opportunities for staff to ask questions.

✓ **Staff identified as close contacts of someone with COVID-19 should be tested for SARS-CoV-2 and self-quarantine at home for 14 days, unless a shortage of critical staff precludes quarantine of those who are asymptomatic** (see considerations for critical infrastructure workers). Refer to the Interim Guidance on Developing a COVID-19 Case Investigation and Contact Tracing Plan [12 KB, 1 page] for more information about contact tracing.

- The best way to protect incarcerated/detained persons, staff, and visitors is to quarantine for 14 days. Check your local health department's website for information about options in your area to possibly shorten this quarantine period.

- Close contacts should self-monitor for symptoms and seek testing.
  - Refer to CDC guidelines for further recommendations regarding home quarantine.

✓ **Staff who have confirmed or suspected COVID-19 should meet CDC criteria for ending home isolation before returning to work.** Monitor CDC guidance on discontinuing home isolation regularly, as circumstances evolve rapidly.

Infection Control

Infection control guidance below is applicable to all types of correctional and detention facilities. Individual facilities should assess their unique needs based on the types of exposure staff and incarcerated/detained persons may have with someone with confirmed or suspected COVID-19.

✓ **All individuals who have the potential for direct or indirect exposure to someone with COVID-19 or infectious materials (including body substances; contaminated medical supplies, devices, and equipment; contaminated environmental surfaces; or contaminated air) should follow infection control practices outlined in the CDC Interim Infection Prevention and Control Recommendations for Patients with Suspected or Confirmed Coronavirus Disease 2019 (COVID-19) in Healthcare Settings. Monitor these guidelines regularly for updates.**

- Implement the above guidance as fully as possible within the correctional/detention context. Some of the specific language may not apply directly to healthcare settings within correctional facilities and detention centers, or to facilities without onsite healthcare capacity, and may need to be adapted to reflect facility operations and custody needs.
- Note that these recommendations apply to staff as well as to incarcerated/detained individuals who may come in contact with contaminated materials during the course of their work placement in the facility (e.g., cleaning).

✓ **Staff should exercise caution and wear recommended PPE when in contact with individuals showing COVID-19 symptoms.** Contact should be minimized to the extent possible until the infected individual is wearing a mask (if not already wearing one and if not contraindicated) and staff are wearing PPE.

✓ **Refer to PPE section to determine recommended PPE for individuals in contact with individuals with COVID-19, their close contacts, and potentially contaminated items.**

✓ **Remind staff about the importance of limiting unnecessary movements between housing units and through multiple areas of the facility, to prevent cross-contamination.**

✓ **Ensure that staff and incarcerated/detained persons are trained to doff PPE after they leave a space where PPE is required, as needed within the scope of their duties and work details. Ideally, staff should don clean PPE before entering a different space within the facility that also requires PPE.**

- If PPE shortages make it impossible for staff to change PPE when they move between different spaces within the facility, ensure that they are trained to move from areas of low exposure risk ("clean") to areas of higher exposure risk ("dirty") while wearing the same PPE, to minimize the risk of contamination across different parts of the facility.

Clinical Care for Individuals with COVID-19

✓ **Facilities should ensure that incarcerated/detained individuals receive medical evaluation and treatment at the first signs of COVID-19 symptoms.**

- If a facility is not able to provide such evaluation and treatment, a plan should be in place to safely transfer the individual to another facility or local hospital (including notifying the facility/hospital in advance). See Transport section. The initial medical evaluation should determine whether a symptomatic individual is at increased risk for severe illness from COVID-19. Persons at increased risk may include older adults and persons of any age with serious underlying medical conditions, including chronic kidney disease, serious heart conditions, and Type-2 diabetes. See CDC's website for a complete list and check regularly for updates as more data become available to inform this issue.
- Based on available information, pregnant people seem to have the same risk of COVID-19 as adults who are not pregnant. However, much remains unknown about the risks of COVID-19 to the pregnant person, the pregnancy, and the unborn child. Prenatal and postnatal care is important for all pregnant people, including those who are incarcerated/detained. Visit the CDC website for more information on pregnancy and breastfeeding in the context of COVID-19.

✓ **Staff evaluating and providing care for individuals with confirmed or suspected COVID-19 should follow the CDC Interim Clinical Guidance for Management of Patients with Confirmed Coronavirus Disease (COVID-19) and monitor the guidance website regularly for updates to these recommendations.**

✓ **Healthcare staff should evaluate persons with COVID-19 symptoms and those who are close contacts of someone with COVID-19 in a separate room, with the door closed if possible, while wearing recommended PPE and ensuring that the individual being evaluated is wearing a mask.**

- If possible, designate a room near each housing unit to evaluate individuals with COVID-19 symptoms, rather than having symptomatic individuals walk through the facility to be evaluated in the medical unit.

✓ **Clinicians are strongly encouraged to test for other causes of respiratory illness (e.g., influenza).** However, presence of another illness such as influenza does not rule out COVID-19.

✓ **When evaluating and treating persons with symptoms of COVID-19 who do not speak English, use a language line or provide a trained interpreter when possible.**

Recommended PPE and PPE Training for Staff and Incarcerated/Detained Persons

✓ **Ensure that all staff (healthcare and non-healthcare) and incarcerated/detained persons who will have contact with infectious materials in their work placements have been trained to correctly don, doff, and dispose of PPE relevant to the level of contact they will have with individuals with confirmed and suspected COVID-19. Ensure strict adherence to OSHA PPE requirements.**

- Ensure that staff and incarcerated/detained persons who require respiratory protection (e.g., N95 respirator)

for their work responsibilities have been medically cleared, trained, and fit-tested in the context of an employer's respiratory protection program. If individuals wearing N95 respirators have facial hair, it should not protrude under the respirator seal, or extend far enough to interfere with the device's valve function (see OSHA regulations).

- For PPE training materials and posters, visit the CDC website on Protecting Healthcare Personnel.

✓ **Ensure that all staff are trained to perform hand hygiene after removing PPE.**

✓ **Ensure that PPE is readily available where and when needed, and that PPE donning/doffing/disposal stations have been set up as described in the Preparation section.**

✓ **Recommended PPE for incarcerated/detained individuals and staff in a correctional facility** will vary based on the type of contact they have with someone with COVID-19 and their close contacts (see Table 1). Each type of recommended PPE is defined below. **As above, note that PPE shortages are anticipated in every category during the COVID-19 response.**

- **N95 respirator**
  N95 respirators should be prioritized when staff anticipate contact with infectious aerosols or droplets from someone with COVID-19. See below for guidance on when surgical masks are acceptable alternatives for N95s. Individuals working under conditions that require an N95 respirator should not use a cloth mask when an N95 is indicated.
- **Surgical mask**
  Worn to protect the wearer from splashes, sprays, and respiratory droplets generated by others. (NOTE: Surgical masks are distinct from cloth masks, which are not PPE but are worn to protect others in the surrounding area from respiratory droplets generated by the wearer. Individuals working under conditions that require a surgical mask should not use a cloth mask when a surgical mask is indicated.)
- **Eye protection**
  Goggles or disposable face shield that fully covers the front and sides of the face.
- **A single pair of disposable patient examination gloves**
  Gloves should be changed if they become torn or heavily contaminated.
- **Disposable medical isolation gown or single-use/disposable coveralls, when feasible**
  - If custody staff are unable to wear a disposable gown or coveralls because it limits access to their duty belt and gear, ensure that duty belt and gear are disinfected after close contact with an individual with confirmed or suspected COVID-19, and that clothing is changed as soon as possible and laundered. Clean and disinfect duty belt and gear prior to reuse using a household cleaning spray or wipe, according to the product label.
  - If there are shortages of gowns, they should be prioritized for aerosol-generating procedures, activities where splashes and sprays are anticipated, and high-contact activities that provide opportunities for transfer of pathogens to the hands and clothing of the wearer.

✓ **Note that shortages of all PPE categories have been seen during the COVID-19 response, particularly for non-healthcare workers. Guidance for optimizing the supply of each category (including strategies to reuse PPE safely) can be found on CDC's website:**

- Strategies for optimizing the supply of N95 respirators
  - Based on local and regional situational analysis of PPE supplies, **surgical masks are an acceptable alternative when the supply chain of respirators cannot meet the demand**. During this time, available respirators should be prioritized for staff engaging in activities that would expose them to respiratory aerosols, which pose the highest exposure risk.
- Strategies for optimizing the supply of surgical masks
  - Reserve surgical masks for individuals who need PPE. Issue cloth masks to incarcerated/detained persons and staff as source control, in order to preserve surgical mask supply (see recommended PPE).
- Strategies for optimizing the supply of eye protection
- Strategies for optimizing the supply of gowns/coveralls
- Strategies for optimizing the supply of disposable medical gloves

Table 1. Recommended Personal Protective Equipment (PPE) for Incarcerated/Detained Persons and Staff in a Correctional or Detention Facility during the COVID-19 Response

Classification of Individual Wearing PPE	N95 respirator	Surgical mask	Eye Protection	Gloves	Gown/ Coveralls
Incarcerated/Detained Persons					
Asymptomatic incarcerated/detained persons (under quarantine as close contacts of someone with COVID-19)	Use cloth masks as source control (NOTE: cloth face coverings are NOT PPE and may not protect the wearer. Prioritize cloth masks for source control among all persons who do not meet criteria for N95 or surgical masks, and to conserve surgical masks for situations that require PPE.)				
Incarcerated/detained persons who have confirmed or suspected COVID-19, or showing symptoms of COVID-19					
Incarcerated/detained persons handling laundry or used food service items from someone with COVID-19 or their close contacts				X	X
Incarcerated/detained persons cleaning an area where someone with COVID-19 spends time	Additional PPE may be needed based on the product label. See CDC guidelines for more details.			X	X
Staff					
Staff having direct contact with asymptomatic incarcerated/detained persons under		Surgical mask, eye protection, and gloves as local supply and scope			

quarantine as close contacts of someone with COVID-19* (but not performing temperature checks or providing medical care)		of duties allow.			
Staff performing temperature checks on any group of people (staff, visitors, or incarcerated/detained persons), or providing medical care to asymptomatic quarantined persons		X	X	X	
Staff having direct contact with (including transport) or offering medical care to individuals with confirmed or suspected COVID-19 (See CDC infection control guidelines). For recommended PPE for staff performing collection of specimens for SARS-CoV-2 testing see the Standardized procedure for SARS-CoV-2 testing in congregate settings.	X**		X	X	X
Staff present during a procedure on someone with confirmed or suspected COVID-19 that may generate infectious aerosols (See CDC infection control guidelines)	X		X	X	X
Staff handling laundry or used food service items from someone with COVID-19 or their close contacts				X	X
Staff cleaning an area where someone with COVID-19 spends time	Additional PPE may be needed based on the product label. See CDC guidelines for more details.			X	X

Classification of Individual Wearing PPE

* A NIOSH-approved N95 respirator is preferred. However, based on local and regional situational analysis of PPE supplies, surgical masks are an acceptable alternative when the supply chain of respirators cannot meet the demand. During this time, available respirators should be prioritized for procedures that are likely to generate respiratory aerosols, which would pose the highest exposure risk to staff.

Verbal Screening and Temperature Check Protocols for Incarcerated/Detained Persons, Staff, and Visitors

The guidance above recommends verbal screening and temperature checks for incarcerated/detained persons, staff, volunteers, and visitors who enter correctional and detention facilities, as well as incarcerated/detained persons who are transferred to another facility or released from custody. Below, verbal screening questions for COVID-19 symptoms and contact with known cases, and a safe temperature check procedure are detailed.

✓ **Verbal screening for symptoms of COVID-19 and contact with COVID-19 cases should include the following questions:**

- *Today or in the past 24 hours, have you had any of the following symptoms?*
  - *Fever, felt feverish, or had chills?*
  - *Cough?*
  - *Difficulty breathing?*
- *In the past 14 days, have you had close contact with a person known to be infected with the novel coronavirus (COVID-19)?*

✓ **The following is a protocol to safely check an individual's temperature:**

- Wash hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol.
- Put on a surgical mask, eye protection (goggles or disposable face shield that fully covers the front and sides of the face), and a single pair of disposable gloves
- Check individual's temperature
- **If performing a temperature check on multiple individuals, ensure that a clean pair of gloves is used for each individual and that the thermometer has been thoroughly cleaned in between each check.** If disposable or non-contact thermometers are used and the screener did not have physical contact with an individual, gloves do not need to be changed before the next check. If non-contact thermometers are used, they should be cleaned with an alcohol wipe (or isopropyl alcohol on a cotton swab) between each individual.
- Remove and discard PPE
- Wash hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol

✓ **If a physical barrier or partition is used to protect the screener rather than a PPE-based approach, the following protocol can be used.** (During screening, the screener stands behind a physical barrier, such as a glass or plastic window or partition, that can protect the screener's face and mucous membranes from respiratory droplets that may be produced when the person being screened sneezes, coughs, or talks.)

- Wash hands with soap and water for at least 20 seconds. If soap and water are not available, use hand sanitizer with at least 60% alcohol.
- Put on a single pair of disposable gloves.
- Check the individual's temperature, reaching around the partition or through the window. Make sure the screener's face stays behind the barrier at all times during the screening.
- **If performing a temperature check on multiple individuals, ensure that a clean pair of gloves is used for**

each individual and that the thermometer has been thoroughly cleaned in between each check. If disposable or non-contact thermometers are used and the screener did not have physical contact with an individual, gloves do not need to be changed before the next check. If non-contact thermometers are used, they should be cleaned with an alcohol wipe (or isopropyl alcohol on a cotton swab) between each individual.

- Remove and discard gloves.
